# METALL-DETEKTORER

## Whites 5900 Di PRO SL

En bestselger p.g.a. sin kraftige ytelse. Fire diskriminasjonsprogrammer, signalbalanse-system som gir renere signaler ved vanskelige bakkekondisjoner. Nytt behagelig grep som gir større rekkevidde. Stort display som viser ID og dybde fra enhver vinkel. Maks teoretisk søkedybde ca. 200 cm. Leveres med 24 cm vannrett spole, batteriboks for 4 stk. 1,5V baby (følger ikke med), og engelsk bruksanvisning.

**Best.nr. Pris**  
29 14 47 B 6998.-

## 38 cm superspole for PRO

Denne spolen erstatter den vanlige 24 cm spolen som leveres med Whites Di PRO SL-serie. Forbedrer følsomheten for typygjenkjenning med 20% og størrelsen med 40%. Vannrett.

**Best.nr. Pris**  
29 16 50 B 1200.-

## Whites AF 101

En bestselger i mange år for hobby-skattejegere over land og strand. Søker etter alle metaller. TR-teknologi gjør at man enkelt kan finne nøyaktig hvor objektet er. 15 cm vannrett spole. Innebygd høyttaler. Hodetelefon-tilkopling. Bruker 6 batterier 1,5V størrelse AA. Maks teoretisk søkedybde 60 cm. Leveres med engelsk bruksanvisning.

**Best.nr. Pris**  
29 15 95 B 998.-

## Whites Eagle Spectrum

Whites toppprodukt. En fullstendig datastyrt metalldetektor som har alle funksjoner man kan tenke seg, men er allikevel enkel å bruke. Fire innebygde programmer: Coins & Jewellery, Jewellery/beach, Relic og Prospecting, som tilsammen effektivt unngår søppel. Også to programmer som du kan programmere selv ved å gi VDI-tall. For å gjøre identifiseringsarbeidet lettere er det på boktabell over VDI-hvilke typer gjenstandsmetaller de representerer. også enkelt justere tone ID, spektrumrespons, frekvensskifting, sendereffekt og forsterkning, og disse settingene kan også programmeres. Et nytt grafisk dybdevisnings-system gjør det enklere å finne gjenstander, og den nye, grafiske VDI-skalaen gjør det f.eks. lett å identifisere jern. Maks teoretisk søkedybde ca. 200 cm. Leveres med vannrett spole 24 cm, batterier og engelsk bruksanvisning.

**Best.nr. Pris**  
29 17 06 B 9998.-

**Whites 4900 Di PRO SL**  
Som 5900, men uten 4 diskriminatorprogrammer  
**Best. nr. Introduksjonspris**  
29 14 49 B 3998.- (veil.)

## Hodetelefon Slimline 26

Dette hodetelefonsettet passer alle metalldetektorene på denne siden.

**Best.nr. Pris**  
29 15 97 B 98.-

## Whites TM 800

Denne detektoren bruker en spesiell teknikk for å finne hulrom og større metallgjenstander gjennom flere meter mineralisert jord. Den kan brukes til å finne huler, gamle brønner, tunneller, septiktanker og rør, som ikke trenger å være av metall. Den finner et kloakkrør på opptil 2,5 m dybde og store luftlommer på 6 m. I tillegg er den en vanlig metalldetektor som f.eks. kan finne et metallobjekt på 2 m<sup>2</sup> på 7 meters dybde. Den er enkel å ta i fra hverandre og sette sammen. Ingen løse ledninger, alt blir koplet når man stikker delene i hverandre. Bruker 6 stk AA batterier (følger ikke med).

**Best.nr. Pris**  
29 17 14 B 8998.-

## Beachcomber BC 60 S2

Dette er storebroren til AF 101. Den har i tillegg et instrument som som viser intensiteten på signalet og diskriminatoremulighet, slik at man effektivt unngår "søppel". "Pinpointing"-mulighet gjør det lettere å plassere gjenstander eksakt. Leveres med 21 cm. spole. Innebygd høyttaler og utgang for hodetelefon. Bruker 6 stk AA-batterier (følger ikke med).

**Best.nr. Pris**  
29 16 33 B 1998.-

## Metall/spenningsfinner

Nyttig når man skal finne rør, ledninger og skruer i vegger. Den gir ett signal ved metall og ett annet signal når den finner elektriske ledninger som er koplet til lysnettet. Leveres i en kraftig plastkasse. Batteri (vanlig 9V) er ikke inkludert.

**Best.nr. Pris**  
06 01 61 99.50

Kjære kunde!

Dette er første utgave av vårt nye Data- og Elektronikkmagasin. Det vil komme ut fire ganger i året, og abonnement koster kr. 50.- per år. I dette magasin vil det komme mange tilbud som kun gjelder abonnentene. Dessuten vil du bli informert om det siste som skjer innen data og elektronikk.

I dette nummer vil jeg spesielt anbefale:

- o Virtual Reality—hva er det? Vi gir deg en innføring i emnet, og viser hvordan du kan oppleve VR på din egen PC.

- o Sky Commuter—den flyvende bil. Denne blir snart leveringsklar i Norge, og her får du alle opplysninger om fremtidens transportmiddel.

- o Bygg et intelligent kontrollerkort til din PC. Den første i en serie om Vellemans byggesett, som forøvrig omtales på side 20 i den vedlagte Velleman-katalogen. NB! Velleman byggesett som går på 220V kan først leveres etter at Norge har blitt medlem av EØS.

- o Bygg din egen PC. Vi viser hvordan du kan montere en topp moderne PC fra løse deler og spare mye penger!

- o 300 nye engelske bøker, fra alle områder innen data og elektronikk.

Mange hilsner fra

Frithjof Arngren

Siv. ing.

## Virtual Reality

Av Frithjof Arngren

*Du har tidligere vært vant til tre-dimensjonal dybdevirkning på PC-skjermen. Da satt du imidlertid utenfor og så på en flat skjerm inn i 3D-verdenen.*

I *Virtual Reality*, eller "nesten-virkelighet", står du faktisk *inne* i skjermen og beveger deg rundt. Du kan spasere nedover en gate og går kanskje inn i et av husene langs veien. Her vil du oppleve hvert rom akkurat som om du var inne i det. Du kan plukke opp en gjenstand og ta den med deg, gjerne slippe den og se at den faller. Mulighetene er utrolige.

Vi vil her presentere to nivåer av *Virtual Reality* (VR) løsninger for PC. Det laveste nivået består av en 486 PC med spesielle programmer montert og en tredimensjonal joystick (men en vanlig joystick kan også brukes). Da vil det du ser vises på monitoren og du kan bevege deg fra rom til rom, gå rundt møbler, gå opp trapper eller gå ut og sette deg i en bil. 3D-joysticken vil hjelpe deg til å utføre alle disse operasjonene. Med dette settet (program og joystick) kan man også konstruere sin egen verden. Programmet og joysticken kan kjøpes hos Arngren Electronics for ca. kr. 12.000,-

Det høyeste nivået er litt mer komplisert og består av en 486 PC med

EISA-bus og tre kort med hver sin hyperraske Intel i860 RISC-prosessor. Kortene har hvert sitt sett av spesialbrikker og egen RAM. En eller to hansker dekket med sensorer som merker hver minste fingerbevegelse og en hjelm som dekker øynene og gir tredimensjonalt syn, erstatter joystick og monitor.

### 3-D lyd og bilde

Inne i hjelmen er det montert en liten skjerm foran hvert øye, slik at man får et fullstendig tredimensjonalt bilde. Systemet gir også tredimensjonal lyd, slik at f.eks. lyden fra en bil vil følge bilen i det den passerer deg. Tilskuere kan se på den vanlige dataskjermen hva du opplever inne i hjelmen. Nå befinner du deg inne i en helt ny tredimensjonal verden. Alt føles helt ekte ut. Da jeg testet dette utstyret falt jeg over en kant i VR-verdenen. Jeg var et øyeblikk helt overbevist om at jeg falt, og jeg datt sammen på gulvet.

Bildet du ser forflytter seg rundt etter hvert som du snur på hodet, og opp

Med den nye VR Ski Trainer fra NEC kan man lære å gå på ski uten å risikere snøskred eller beinbrudd. Brunfargen må man derimot få på andre måter...

og ned hvis du nikker. Hanskene gir deg følelsen av motstand. Hvis du holder i noe eller skyver på noe vil de små putene i hansken presse tilbake. Alle disse effektene gir deg en følelse av bortimot fullstendig virkelighet.

### Kan sammenkobles

Systemet kan også koples til et høyhastighets modem, slik at du kan treffe andre mennesker i samme situasjon. Faktisk kan mange mennesker snakke sammen, ta på hverandre og reise sammen overalt i en spennende ny verden som venter på å bli utforsket. Fremtidens reiser kan kanskje foretas uten at du beveger deg ut av stua. Allerede nå eksperimenterer NASA med å bruke VR-teknikk for å utføre farlige oppdrag innen romfartsindustrien.

Dette systemet koster komplett i dag 2-300.000 kroner, men utviklingen går så raskt at det ikke vil ta mange årene før det kommer ned i rundt 10 000 kr. Ønsker du mere informasjon om VR, så be om gratis *Virtual Reality*-brosjyre (best. nr. 0006).

Definer rommet i objekteditoren

Start runtime-system og gå inn

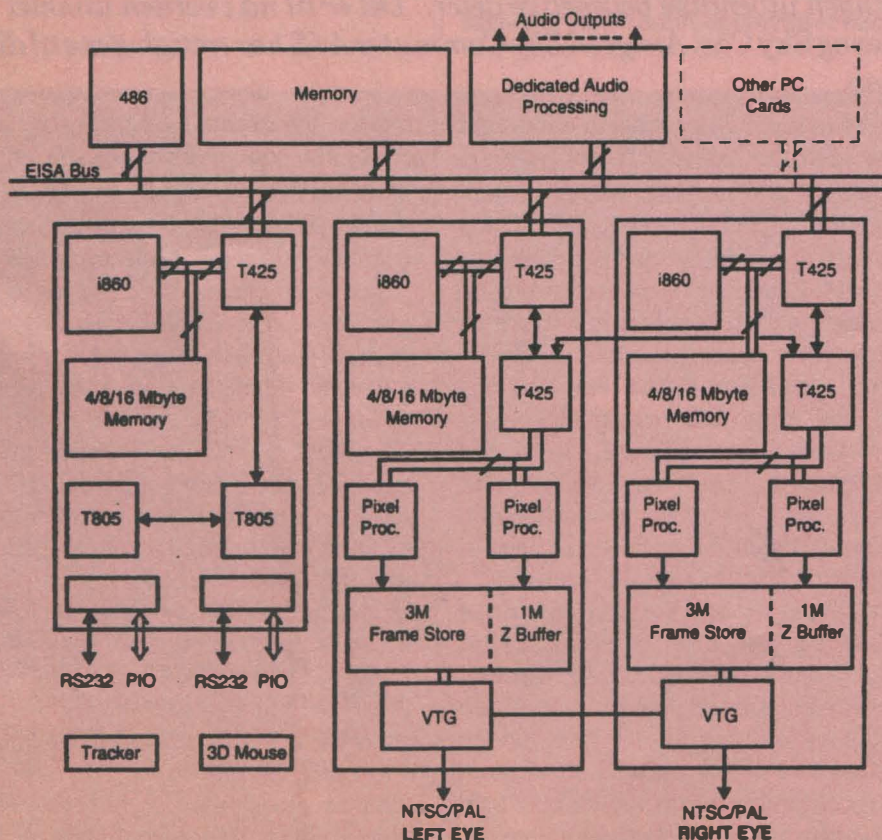

Beveg deg fritt rundt i real-time

Ta tak i objekter med hånden...

...og flytt de rundt i rommet!

Oppbygning av Virtual Reality-maskinen. Hver bildekanal har sin egen Intel i860 RISC-prosessor, og en tredje tar for seg input

# Sky Comm den

Av Frithjof Arngren

*Dette er biler som kan lette og lande vertikalt, noe som kalles VTOL (vertical take off and landing) på fagspråket, og de har ingen utvendige bevegelige deler." Det er til nå i verden utviklet to forskjellige flygende biler, Sky Commuter og Sky Car. Arngren Sky Commuter A/S har rettighetene til disse i norden med opsjon for resten av europa.*

## Sky Commuter

På bakken blir den drevet fremover av en liten batteridrevet motor. Den har en toppfart på 40 km/t og kjører uten støy og forurensing. Ønsker du å fly er det bare å trykke inn en knapp som starter den FAA-godkjente Allison gass-turbinen. Denne driver to vekselstrøms-generatorer som gir strøm til fire elektromotorer, tre for løft og en for fremdrift. Hver motor driver to kontra-

**300Hk rotasjonsmotor, som veier under 60kg**

roterende rotor som sitter inne i skroget. Tuppen av hvert rotorblad blir skjøvet frem av mange elektromagneter plassert i en ring rundt rotoren, og magnetene skifter polaritet i stor hastighet, styrt av en datamaskin. Systemet er verdenspatentert. Under rotorene sitter den mer tradisjonelle børsteløse elektromotoren. Dette gjør at hver motor yter hele 140hk og veier under 10kg. Turbinen drives av kerosen (flybensin) som bare koster 2kr pr. liter, og den bruker kun 2 liter/mil.

Alt styres av fire datamaskiner (en nødvendig, tre i reserve) og gjør at det virker som om man styrer bilen direkte, men i virkeligheten gjør datamaskinen en masse beregninger for hver eneste operasjon. I motsetning til et helikopter er det faktisk datamaskinen som gjør mesteparten av styringen, føreren korrigerer bare med en styrespak og gir datamaskinen beskjed når den skal skifte retning (Fly-by-wire).

Det er også innebygd satellittnavigasjon (GPS) og antikollisjons-system. GPS (global positioning system) fungerer i dag i hele verden og gir deg posisjonen i tre dimensjoner ned til en nøyaktighet på to meter. (Arngren selger også bærbare GPS-systemer til under kr 10 000.)

Toppfarten til Sky Commuter i luften er ca. 200km/t og max høyde ca. 3000m. Den har en max rekkevidde på 800km og lager ikke mere støy enn en speedbåt (85dB ved 20m).

Hvis man skulle være så uheldig at alle systemene krasjer, selv om alle har minst et i reserve, vil en fallskjerm bli skutt ut fra skroget (BRS, ballistic recovery system), og hele bilen daler trygt ned på bakken.

Det er plass til to personer, og Sky Commuter kan løfte 300kg i tillegg til full tank. Skroget er av karbonfiber og kevlar, som veier en brøkdel av stål og er åtte ganger sterkere.

# Commuter flyvende bil

Sky Commuteren vil foreløpig bli solgt som byggesett under kategorien eksperimentfly, det vil si at du må bygge minst halvparten selv. For å fly den må du ha småflysertifikat. Prisen er ca. 1,4 millioner kroner.

M400 SkyCar klar til å lette

## Sky Car

Denne flyvende bilen har fire mekaniske rotasjonsmotorer som er montert horisontalt parallelt med skroget, to foran og to bak. Hver motor yter 300hk og veier under 60kg. Motorene jobber etter *wankel-prinsippet* men bruker ikke olje (lean burning). Dette fungerer fordi rotasjonskammeret er dekket med et lag keramikk. Hver motor har kun 6 bevegelige deler, mens vanlige motorer har 48.

Bilen løftes ved at luftstrømmen fra motorene bøyes nedover av "gardiner" som er montert bak hver motor. Luftstrømmen blir bøyd mindre og mindre nedover etterhvert som man får høyde og ønsker fremdrift.

Sky Car'en kan ta fire personer og løfteevnen er 400kg med full tank. Toppfarten er på 670km/t og støyen er 62dBA

ved 150m. Den bruker alle typer diesel og bensin og forbruket er ca. 4 liter pr. mil. Ellers fungerer den på samme måte som Sky Commutereren. Den leveres kun ferdigbygget til en pris av ca. 4 millioner kroner.

Ønsker du å se flybilen fly, kan du bestille en videokassett av den i lufta (best. nr. 0003, kr 250,-). Skal vi greie å demonstrere at Sky Commutereren flyr i Norge innen et år, må vi selge 85 aksjer i firmaet Arngren Sky Commuter A/S. Kjøp en aksje (0,5% av firmaet, kr. 51.000) og du får rett til å fly gratis, tilgang til all informasjon. Om to år skal vi gjøre en ny emisjon, og da vil antagelig aksjene ha steget fem ganger. Du vil også være med å tilføre Norge ny teknologi og skaffe nye arbeidsplasser. Vi gir også aksjeeierne garanti om at de får igjen 90% av pengene sine hvis det ikke blir kjøpt inn en flybil. Vi vil også gi firmaer som har kjøpt aksje mulighet til å annonsere sine produkter gratis ved hjelp av Sky Commutereren. Det er helt sikkert at det vekker oppsikt når denne bilen flyr lavt rundt omkring.

Prospekt og tegningsinnbydelse i farger: Best. nr. 0002, pris kr. 0,-  
En times VHS video av flybilen i lufta: Best. nr. 0003, pris kr. 250,-

# Intelligent kontrollerkort

Av Tony Brickell & Mike Holmes

*Dette er en artikkel om bruk og programmering av Vellemans mikroprosessorstyrte styrings- og målingskort K2612. For informasjon om priser og tilleggsutstyr kan man se i slutten av artikkelen og i Arngrens egen Velleman-katalog på side 20-22.*

Dette input/output utvidelsessystemet er konstruert for måling og styring, og koples til en datamaskin som har en RS-232 port eller en 20mA strømslynge. En mikroprosessor med et kraftig tekstbasert programmeringsspråk gjør at hoveddatamaskinen slipper å følge med på I/O-portene og blir ledig mesteparten av tiden. Det eneste datamaskinen trengs til er programmering, spesielle avgjørelser samt opp- og nedlasting av data. Selve kontrollerkortet har én utvidelsesport for styrings- og målingsenheter, men denne kan koples til fire utvidelseskort som gir totalt seksten utvidelsesporter.

## Kretsbeskrivelse

Som nevnt er kontrollerkortet en komplett mikrokontroller med en 8031 mikroprosessor. Figur 1 viser fire forskjellige måter kortet kan koples til datamaskinen på ved å bruke en vanlig 25pin DSUB-plugg. Den vanligste metoden er helt klart RS232-koplingen, 20mA strømsløyfen er kun med for industrielle datamaskiner. IC9 og IC10

eroptokoplere som kun brukes til denne, og disse trengs derfor ikke hvis man bruker RS-232.

Igen er da IC7 og IC8. Dette er RS-232 spenningskonvertere, som gjør om +12V og -12V til 5V TTL nivå for mikroprosessor, IC1. IC12 er en spenningsregulator som gir negativ spenning til RS-232-driveren IC7. Legg også merke til at det ikke følger med noen RS-232-kontakt til å montere på kontrollerkortet, da dette er avhengig av kompatibilitet med datamaskinen. Det helt klart vanligste å bruke er en 25-pins hankontakt, som kan bestilles fra Arngren (best. nr. 741183, kr. 29,50, se også i listen over ekstrautstyr). Koblingen kan man se på Figur 1.

I figur 2 er +V1 den "rå" strømforsyningen på 9VDC, mens +V2 er 5V-forsyningen. -V1 er den negative spenningen generert av RS-232-driveren IC12. Hvis man kun bruker kontrollerkortet med en kortplass så er 5V-regulatoren med kjøleribbe montert på denne. Hvis man har utvidelseskortet for fire kort så er den plassert her. Utvidelseskortet har også

plass for komponenter til en komplett strømforsyning, se figur 3 og 4.

Mikrokontrollerdelen er ganske enkel og grei, da mikroprosessorer har mange funksjoner innebygd. Dette gjør at printkortet blir mye enklere og at antallet komponenter reduseres vesent-

prosessorer slått av på en "ren" måte, uten at den gjør tilfeldige lese og skriveoperasjoner.

DIP-switchen SW1 er koplet til en port på IC1, som sjekkes ved oppstart

den mottar (echo). Dette er spesielt greit hvis man styrer kortet manuelt (med terminal eller terminalprogram), men bør ikke brukes hvis man bruker egne programmer for å styre kortet, da dette kan bli vanskelig for programmet.

SW1/7 velger teletype- eller terminalmode. Denne bør settes i terminalmode da kortet neppe blir koblet til en teletype-maskin (påvirker kun hvordan tegn blir slettet med backspacetasten). SW1/8 blir ikke brukt.

IC5 og IC6 bufferer alle signaler til og fra kontrollkortet. IC5 er en toveis, 8-bit buss tranceiver som har pullup-motstander R21-R28 i sokkel J9-J10 slik at ingen buss-linjer blir svevende mens IC5 er i høyimpedanse-fasen. IC6 gir både adresse- og kontrollbussen til denne. J9 er en 24-pin DIL-kontakt for å tilkoble utvidelseskortet med en flatkabel. Hvis kun et ekstrakort skal brukes setter man det i kantkontakten J10. Se figur 5 for pinneoversikt, bilder og figur 4 for kobling av kortet.

Selv om alle 8 adresselinjene er vist, så er bare 5 av dem koblet, A0 til A4, resten er fast koblet til +V2 (5V). Opp til 32 adresser er derfor mulige, men bare 19 brukes. 16 adresser til de fire utvidelseskortene og tre adresser til

for å sette overføringsprotokollen og parameterene som skal brukes for å kommunisere med datamaskinen. Bryterne settes i følge tabell 1. SW1 bestemmer, i tillegg til hastighet, paritet og stoppbit setter man her også om kortet skal sende tilbake det

Prosessoren har endel interessante muligheter, bl.a. en intern klokke som bare trenger krystallet X1 og kondensatorene C2, C10, C11 og C20. En annen ting er at databussen er multiplekset med de lavere 8 bit av adressebussen, fordi pinneantallet er begrenset. Dette gjør at adresselinjene A0 til A7 må gjennom den oktale latches IC2 før databussen kan brukes. Latches holder den lave adressen til hukommelseskretsene IC3 og IC4.

RESET-inngangen på pinne 9 har en schmitttrigger-inngang slik at den kun trenger et enkelt konstant nettverk, R7 og C16, for å resette prosessorer ved oppstart. Prosessorer startes med en gang pinne 9 går lav. For å gjøre alt litt greiere er det også med en krets som resetter og stopper CPU-aktiviteten når alt kobles fra eller slås av. Dette gjøres av T1, T2, T8 og rundtliggende deler.

Når kortet startes vil ikke tidskonstant-kondensatoren C16 lade seg opp fordi T8 er på. Når +V1 går over zenerdioden ZD1 vil den slå på T1, som igjen slår av T2 og T8. ZD1 sikrer at det er høy nok spenning på +V1 til å forsyne regulatoren VR1 skikkelig, minst 7,5V. På samme måten vil CPUen bli resatt med en gang +V1 faller under denne verdien når kortet slås av eller ved strømbrudd. På denne måten blir

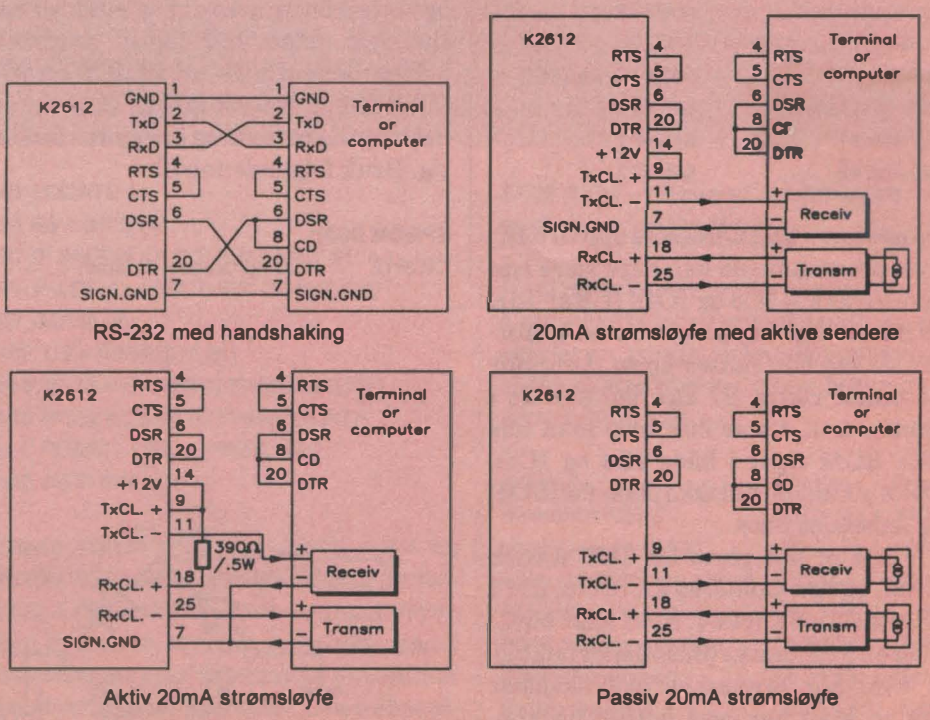

Fig. 1 Noen av de forskjellige måtene man kan kommunisere med interfacekortet. Av disse vil i de fleste tilfeller RS-232 med handshaking være et naturlig valg.

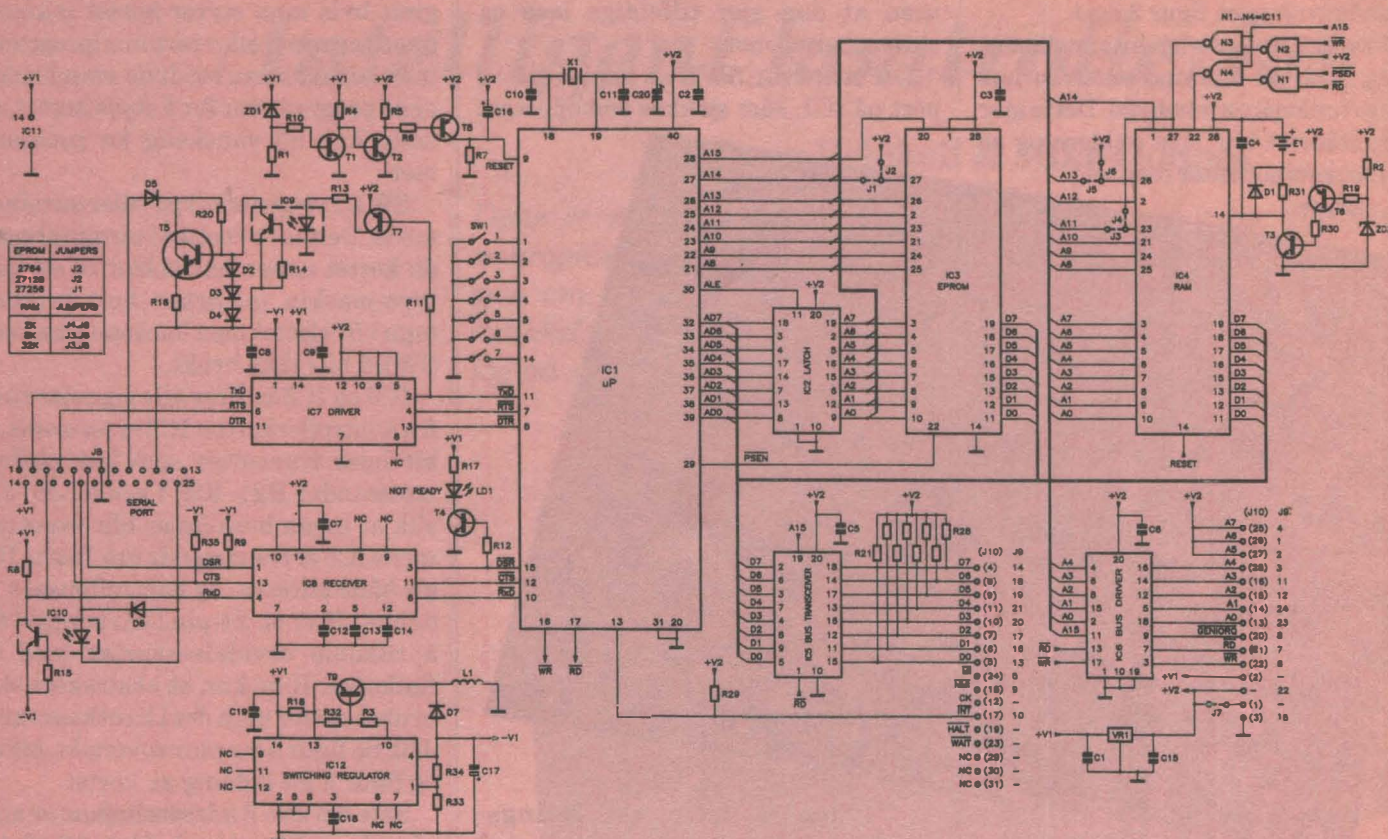

Fig. 2 Kretsskjema for interfacekortet

“spesielt bruk”. Disse adressene plasseres som følger:

#### Øverste 32K blokk:

Grunnadresse	&H7F00
+Offset(A5–A7 v. J9=1)	&H7FE0
I/O-kort	&H7FE0–&H7FEF
Real-time klokke	&H7FF0
A/D-kort #1	&H7FF2
A/D-kort #2	&H7FF3

Prosessoren kan adressere opp til 64K, men programmene kan bare være i de laveste 32K (i IC3 og IC4). IC3 er 16K ROM med styringsprogrammet for kortet. J2 må kortslettes for at dette blir adressert riktig. J1 kan kortslettes i stedet, men det er kun hvis man har 32K ROM (16K i både IC3 og IC4). Dette gir imidlertid ikke plass for RAM, og anbefales ikke.

I IC4 er det plass for 16K statisk RAM, og her monteres 2K (6116, 5117 eller 5517), 8K (6264, 5165 eller 5565) eller en 32K-brikke (62256 eller 55257). I RAM blir brukerens instruksjoner lagret. Man har også batteri-backup, hvor E1 blir ladet via T3 og R31, og isolert fra 0V og kobles inn på IC4 ved strømfall av T6 og ZD2.

## Konstruksjon

Instruksjonene for sammensetting som følger med settet er rimelig komplette og greie å følge, men et par punkter bør tas opp. Man må lodde sammen loddebroene J1–J6 under IC3 og IC4 (EPROM og statisk RAM). Dette er en litt uvanlig metode og bør gjøres forsiktig. Bruk følgende tabell:

#### EPROM (IC3):

CK2612 J2 kortslettes, J1 åpen

#### RAM (IC4):

2K (std.)	J4 og J6 kortslettes, J3 og J5 åpen
8K (6264)	J3 og J6 kortslettes, J4 og J5 åpen
32K (62256)	J3 og J5 kortslettes, J4 og J6 åpen

Som allerede nevnt leveres settet med 6116, en 2K statisk RAM-brikke. Alternativt kan man også sette i en 6264 på 8K (best. nr. 16 64 21, kr 49,50) eller en 32K 62256 (best. nr. 16 50 50, kr 99,50) for å gi mere plass til egne programmer.

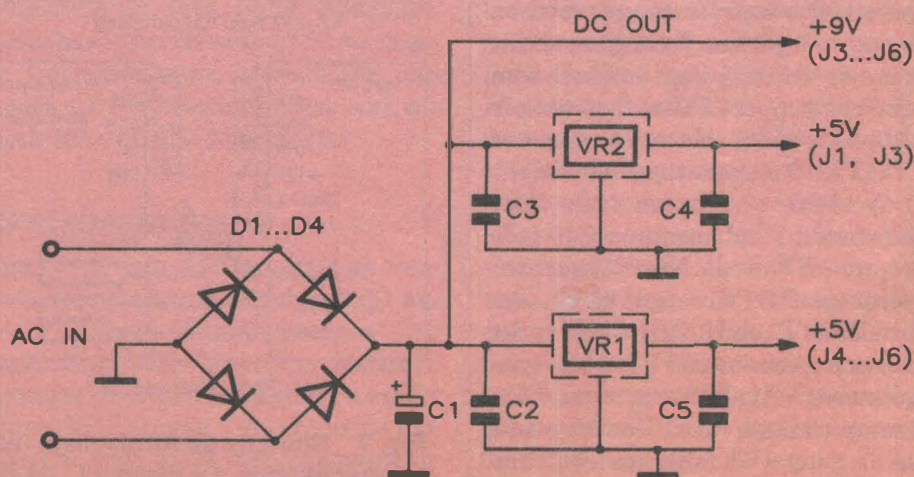

Fig. 3 Ekstern strømforsyning som koblet til utvidelseskortet

Detalj bilde av DIP-switch og RS-232 seriell port.

Imidlertid er de 2K som følger med vanligvis nok.

J8, en 25-pins DSUB han-kontakt, er ikke med i settet. En vinkel-type for montering på printkort bør kjøpes separat (best. nr. 741183, kr. 29,50).

Man må ikke ha utvidelseskortet for at alt skal virke. J9, VR1, C15 og C1 skal bare monteres hvis man *ikke* bruker utvidelseskortet, hvor disse komponentene ellers skal plasseres, og en ledning strekkes mellom DCOUT+ på utvidelseskortet og +9V inngangen på kontrollerkortet. Det er også verd å nevne at Euro-kontaktene som loddes på kontrollerkortet og utvidelseskortet ikke følger med disse, men følger isteden med hvert enkelt I/O-kort som kjøpes separat. Det anbefales å montere kortet i en skjermet boks for å unngå forstyrrelser fra og av andre maskiner (hovedkatalog 1992 side 201).

## Operasjon

RS-232-kabelen må lages etter tegningen i figur 1. Man bør ta med alle ledninger som er koplet der. Det anbefales ikke å sette den opp uten handshaking (DSR/DTR). Legg merke til at koblingen er forskjellig i hver ende av kabelen. Merk derfor den ene enden tydelig for å unngå feilkobling.

Fuller detaljer om kortets instruksjonssett er umulig å ta med her, men de er ganske bra forklart i håndboken på 24 sider som følger med settet. Nedenfor kommer et ganske enkelt GW-basic-program for PC, men kortet fungerer like fint med de fleste terminalprogrammer som finnes, f. eks. Telix og ProComm.

10 CLS: COLOR 7,0

20 REM Hvis kontrollerkortet ikke er koblet til COM1 må neste linje forandres.

30 OPEN # "COM1:2400,E,7,1PE" AS #1

Fig. 4 Koblinger mellom kontrollerkort og utvidelseskort med 24-leder flatkabel og plugg. Alle koblinger bortsett fra +9V blir gjort gjennom denne kabelen. +9V må kobles separat med en løs ledning. Transformator kan tilkobles utvidelseskortet som vist

```
40 LOCATE ,,1
50 A$ = INKEY$
60 IF INKEY$ <> "" THEN PRINT #1, A$;
70 IF LOF(1) < 256 THEN GOSUB 100
80 GOTO 50
100 C$ = INPUT$(, #1)
110 IF C$ = CHR$(10) THEN RETURN
120 IF C$ = CHR$(8) THEN LOCATE,
    POS(I) - 1 ELSE PRINT C$;
130 RETURN
```

Dette kortet vil antageligvis mest bli brukt til prosessstyring, måling og testing, f. eks. måling av utladningskurven hos batterier, styring av servoer, etc. I håndboken står det mange eksempler på styringskommandoer. Noen eksempler følger her:

RDBI 15 XX XX 00 — Les bit 5 på kort 1 på minuttet, hvert minutt.

SADE 3 154 — Gi beskjed til datamaskinen når kort 3 leverer verdien 154.

Kontrollerkortet må ha ekstra kort for å kunne ta i mot og sende ut data, derfor er ikke programmeksempler nevnt her. Disse ekstrakortene vil bli beskrevet i senere nummer.

Artikkel	Best.nr.	Pris
Hovedkort K2612	08 01 97	999,-
Utvidelseskort K2631	08 02 06	299,-

Relé-kort	08 02 16	199,-
Triac-kort	08 06 03	189,-

# Bygg din egen PC

Av Carl Müller og Geir Aalberg

*En steg-for-steg beskrivelse i hvordan du bygger en 486DX-33 PC fra standard komponenter. I tillegg til en morsom og lærerik opplevelse, sparer du også masse penger.*

I denne beskrivelsen vil vi forklare hvordan du monterer en PC fra følgende komponenter:

1.	PC 2257	Mini-tower	398.-
2.	PC 2271	200W strømforsyning	698.-
3.	PC 1176	486DX-33 hovedkort	4498.-
4.	PC 2819	Multi-I/O kontrollerkort	198.-
5.	PC 2705	Super VGA-kort 1MB	548.-
6.	PC 1203	3 1/2" 1.44MB floppy	448.-
7.	PC 1390	120MB harddisk	2298.-
8.	PC 1721	4 stk. 1MB RAM	1192.-

I tillegg må du naturligvis ha skjerm og tastatur (og gjerne mus). Fremgangsmåten vil som oftest være den samme for andre komponenter, så det er intet i veien for å lage en PC etter din egen spesifisering. Vær oppmerksom på at de forskjellige varene kan være produsert av forskjellige leverandører og avvike noe i utforming. Denne veiledningen må derfor ikke følges slavisk, men oppfattes som generelle retningslinjer.

## Diskstasjoner

Før du monterer drivene, bør du sjekke etter hvilken vei kablene skal monte-

res. Se på printkortet og finn tallet "1" ved kantkontakten. Flatkabelen skal monteres slik at den fargede ledningen kobles til leder nr. 1 på kontakten.

Plasser harddisken i den nederste av 3 1/2"-rommene, slik at kantkontakten vender inn i kabinettet, og siden med komponenter vender ned. Fest med skruer på hver side. Monter diskettstasjonen i rommet over, slik at knappen på fronten ligger under åpningen. 5 1/4" diskettstasjon eller CD-ROM monteres på samme måte.

## Hovedkort

På hovedkortet finnes det to banker for RAM-moduler, hvor hver bank tar fire moduler. Har du bare fire SIMM'er (tilsammen 4MB), må disse monteres i bank 1. Hovedkortet monteres stående i kabinettet, slik at slottene for ekspansjonskort passer inn sammen med åpningene i chassiset. Hvis kabinettet har monteringsplate for hovedkortet, kan denne med fordel løsnes fra chassiset (2 skruer) noe som gjør monteringen enklere.

Trykk de hvite distansestykkene av plast inn i hovedkortet slik at de korresponderer med sporene i monteringsplaten. Fest avstandsstykkene (sekskantformede metallskruer) i monteringsplaten på steder som passer til skrueshull i hovedkortet. Skyv kortet på plass i monteringsplaten, og

fest det med maskinskruer til distansestykkene.

## Brytere og LED'er

Slå opp i manualen for hovedkortet, og finn diagrammet over jümpere og tilkoblingspinner. Koble ledningene fra tastaturlås, høyttaler, resetknapp, turboknapp og turbo-LED til de respektive pinnene på hovedkortet. Den varmeste fargen er alltid + (dvs rød hvis rød/hvit, gul hvis gul/svart, etc.). Finn også ledningen til harddisk-LED, som senere skal kobles til kontrollerkortet.

## Strømforsyning

Hvis denne ikke sitter ferdig montert i kassen, festes den til bakkanten med fire skruer slik at viften stikker ut i friluft. Fra dette stikker det ut mengder med ledninger i alle regnbuens far-

Fig. 1 De sorte ledningene skal vende mot hverandre når man kobler strømmen til hovedkortet

ger. Til hovedkortet skal det kobles to kontakter med seks ledninger hver på. Disse er som oftest merket P8 og P9, og skal kobles i henholdsvis pinne 1-6 og 7-12 på hovedkortet. **OBS! Kobles disse feil, ødelegger du hovedkortet!** Som huskeregel kan man merke seg at de sorte ledningene skal alltid vende mot hverandre. Se figur 1.

Enten du har strømbryter på fronten av kassen eller bak, må denne tilkobles en kabel fra strømforsyningen. Denne stikker det ut fire ledninger med kabelsko og en med øyepå, av disse skal jordledningen (grønn/gul med øye) kobles så til et eller annet metallobjekt i chassiet. De andre ledningene kobles til bryteren på samme måte som er anvist på klistelappen på strømforsyningen (normalt blå-1/1, hvit-1/3, brun-2/4, sort 2/6). Skulle man være så uheldig å koble disse feil, skjer det ikke noe verre enn at sikringen i sikringsskapet går! Monter bryteren med posisjon 0 (av) ned og 1 (på) opp. Skyv bryteren inn til den sitter fast.

## Kontrollerkort

Slå opp i dokumentasjonen til kontrollerkortet, og finn diagrammet for jumpere og tilkoblinger. Sjekk at

jumperne står riktig (som oftest), og merk hvor pinne 1 er på kontaktene for harddisk og floppydriver. Sett kontrollerkortet i en passende (16-bits) slot, gjerne i plassen lengst inn mot sentrum. Koble flatkabelen til harddisk og kontrollerkort, slik at den fargede lederen forbinder pinne 1 fra harddisken til kortet. Gjør likedan for diskettstasjonen. Til slutt forbinder du harddisk-LED'en til pinnene for dette på kortet.

Hvis du kjøper et multi-I/O kort, er det ikke plass til alle serie- og parallellportene på kortet. Noen av disse følger oftest med løst, og må skrues fast enten en ledig kortplass, eller i chassiet (bruk en spiss tang til å brette ut dekslet hvis det ikke er skrudd fast). Koble disse til I/O-kortet som anvist.

## VGA-kort

Sjekk om det er noen jumpere eller DIP-switcher som må forandres (vanligvis bare hvis du har en multisync-monitor som ikke greier 72Hz sync fra Super VGA-kortet). Monter dette i en

passende slot, gjerne i den ene enden (slik at det kommer lengst mulig unna lyd kort hvis du kjøper deg dette). Til VGA-kortet følger det gjerne drivere for Windows og andre programmer, disse installeres senere som beskrevet i manualen til kortet.

## Oppstart

Koble til VGA-skjerm og tastatur (og mus hvis du har det). Slå på maskinen. Hvis alt er koblet riktig, vil det først komme et pipp og copyright-beskjeder fra BIOS'ene på VGA-kortet og hovedkortet. Etter at den har telt opp hvor mye RAM som finnes, vil du få beskjed om å trykke [Del] eller [Esc] for å kjøre Setup. Etter å ha gjort så, går du inn i General Setup og setter klokkeslett og dato, samt hvilke typer diskstasjoner du har. For diskettstasjoner er dette veldig enkelt, for harddisker er det litt mer jobb.

Du må først finne frem dokumentasjonsarket for harddisken, og finne ut antall hoder, sylindere og sektorer per track (precomp og landing zone er irrelevant for IDE-harddisker). Som oftest må du velge harddisk type 47 (user defined), hvis du ikke finner den i listen over allerede definerte harddisker (trykk F1 på AMI BIOS for liste). Etter å ha lagt inn de relevante data, vil den regne ut størrelsen på harddisken. (Merk at AMI BIOS regner en megabyte som 1024K, mens de fleste harddiskfabrikanter regner med 1000K for å få de til å lyde større. En 120MB harddisk vil derfor oftest vises som en 116MB.)

Etter å ha lagret setup'en, er det bare å boote fra disketter, formattere harddisken (med FDISK og FORMAT). Bruker du MS-DOS 5.0, gjøres dette bortimot automatisk, og PC'en er klar til bruk.

## HOVEDKORT

### 386 SX hovedkort

Våre 386SX hovedkort har AMD prosessor og AMI BIOS fra '92. De har meget små mål (217×167mm), slik at de passer i omtrent et hvert kabinet. 6 kortplasser gir god utvidelsesmulighet. Opptil 16MB RAM kan plasseres i de 4 SIMM-slot'ene.

Best.nr.	Hastighet	Pris
PC 1168	25 MHz	898.-
PC 1169	33 MHz	998.-

### 386 DX 40MHz hovedkort

386 DX kortene har AMD 40MHz prosessor og AMI BIOS. De har 64k cache montert. 6 kortplasser. 8 SIMM plasser gjør at de kan bygges ut til hele 32MB RAM.

Best.nr.	Hastighet	Pris
PC 1165	40 MHz	1598.-

### Cyrix 486DLC 40MHz kort

Dette hovedkortet bruker den nye 40MHz prosessoren fra Cyrix. Den gjør at dette hovedkortet går raskere enn et tilsvarende Intel 486DX 33MHz-kort. Det har AMI BIOS og 8 kortplasser. opptil 32 MB RAM kan monteres i de 8 SIMM-slot'ene. 1 k intern 'writeback' cache og 128k ekstern cache. 'Writeback' betyr at prosessoren bruker cachen også når den skriver til minnet, noe Intel ikke gjør.

Best.nr.	Hastighet	Pris
PC 1177	33MHz DLC	2499.-
PC 1178	40MHz DLC	3498.-

### Intel 486 hovedkort

Disse hovedkortene har Intel 486 prosessor og AMI BIOS. De har 8 kortplasser, og opptil 32 MB RAM kan plasseres i de 8 SIMM-slotene. Alle DX-kort har 256K cache, mens SX'en har 64K. 66MHz DX/2 kortet bruker klokke-dobling.

Best.nr.	Hastighet	Pris	3 å
PC 1170	33MHz SX	2498.-	1998.-
PC 1176	33MHz DX	4498.-	3998.-
PC 1180	50MHz DX	6998.-	5998.-
PC 1182	66MHz DX/2	8498.-	6998.-

For flere hovedkort, se hovedkatalogen 1992 s. 4

## HARDDISKER

### IDE Harddisker

Alle harddiskene er av IDE-AT (AT-bus) typen, og det følger med instruksjoner om oppsett o.l. Alle kan settes opp til å være alene, eller som master el. slave i ett sett på to harddisker.

Best.nr.	Størrelse	Pris
PC 1380	40 MB	1398.-
PC 1382	80 MB	1898.-
PC 1386	105 MB	1998.-
PC 1390	120 MB	2298.-
PC 1392	210 MB	3498.-

### Monterings Skinner

For å montere en 3 1/2" harddisk i en 5 1/4" plass.

Best. nr.	Pris	3 å	10 å
PC 1376	59.-	54.-	49.-

### 40 pol IDE harddiskkabel

Med tre kontakter for tilkopling av opptil to harddisker. Se også under *Kabler* senere i katalogen.

Best. nr.	Pris	3 å	10 å
PC 2125	32.-	28.-	23.-

For flere harddisker, se hovedkatalogen 1992 s. 9

## DISKETT-STASJONER

### Diskettstasjon 3 1/2" 1.44MB

Teac/Panasonic høykvalitets floppydrive for 3 1/2" disketter opptil 1.44MB. Leveres uten ramme for montering i 5 1/4" plass.

Best. nr.	Pris	3 å	10 å
PC 1203	448.-	438.-	398.-

### Ramme til 3 1/2" drive

For montering av 3 1/2" drive i 5 1/4" plass.

Best. nr.	Pris	3 å	10 å
PC 1238	59.-	54.-	49.-

### Diskettstasjon 5 1/4" 1.2MB

Teac/Panasonic høykvalitets floppydrive for 5 1/4" disketter opptil 1.2MB.

Best. nr.	Pris	3 å	10 å
PC 1273	798.-	698.-	598.-

## SKJERMER

### 14" Super VGA skjerm

Multifrekvens lavstråleskjerm som følger MPR-II reglene for elektromagnetisk stråling. Støtter oppløsninger på opptil 1024x768 og har en dot pitch på 0.28.15 pins VGA plugg.

Best. nr.	Pris	3 å	10 å
PC 2275	2698.-	2598.-	2398.-

### 14" overscan lavstråleskjerm

Som over, men har i tillegg digital kontroll av bildestørrelse og -posisjon. Bildet kan dekke hele skjermen, så man slipper "sørgender".

Best. nr.	Pris	3 å	10 å
PC 2277	2998.-	2798.-	2498.-

### 14" Monokrom SVGA skjerm

SuperVGA lavstråle multifrekvens gråtoneskjerm, som støtter oppløsninger på opptil 1024x768 og har en dot-pitch på 0.38. 15 pins VGA plugg.

Best. nr.	Pris
PC 2274	1298.-

For flere skjermer, se hovedkatalogen 1992 s. 10

## SKJERMKORT

### SuperVGA-kort

Alle de følgende kortene er 16-bits SuperVGA kort. De har 15 pin, 3-radars DSUB VGA-utgang. Drivere til mange programmer følger med. Max oppløsning er som følger (bredde x høyde x farger):

256K:	800 x 600 x 16
512K:	1024 x 768 x 16 eller 800 x 600 x 256
1MB:	1024 x 768 x 256

### SVGA kort med 256K RAM

Best.nr. PC 2700 kr 298.- 3 å kr 248.-

### SVGA kort med 512K RAM

Best.nr. PC 2701 kr 398.- 3 å kr 348.-

### SVGA kort med 1MB RAM

Best.nr. PC 2705 kr 548.- 3 å 448.-

### SVGA-kort med aksellerator

Skjermkort med grafikk-aksellerator for å gjøre Windows og andre grafiske grensesnitt mye raskere i bruk. Det gjør faktisk skjermoppdatering i Windows hele 7 ganger raskere! Med 1 MB minne. Viser 1024x768-oppløsning i 256 farger. Drivere for mange programmer følger med. 15pin VGA-utgang.

Best. nr.	Pris
PC 2710	1498.-

For flere skjermkort, se hovedkatalogen 1992 s. 12

# RAM

### DRAM DIP-brikker

Best.nr.	Type		Pris stk.	v.ant.	v.ant.

## KASSER & PS

### Mini-tower

For Baby AT-kort. Plass for to 3½" stasjoner, to 5¼" stasjoner og en 3½" harddisk. Inkluderer skruer og braketter for montering. Ytre mål 330×180×395mm.

Best. nr.	Pris	3 å	10 å
PC 2257	398.-	378.-	298.-

### Desktop-kasse

For Baby AT-kort. Plass for tre 5¼" stasjoner og en 3½" stasjon. Inkluderer skruer og braketter. Ytre mål 360×162×402mm.

Best. nr.	Pris	3 å	10 å
PC 2253	398.-	378.-	298.-

### Desktop-kasse m/ strømfors.

Samme som over, men inkluderer 200W strømforsyning og strømkabel. Godkjent av NEMKO.

Best. nr.	Pris	3 å	10 å
PC 2270	898.-	698.-	

### 200W strømforsyning

Standard PS/2-type, passer i de fleste moderne PC/AT- og PS/2-kasser. Godkjent av NEMKO. Strømkabel medfølger. Mål 150×84×140mm.

Best. nr.	Pris	3 å	10 å
PC 2271	698.-	548.-	

For flere kasser, se hovedkatalogen 1992 s. 14

## INPUT-ENHETER

### PC-tastatur

102-tasters tastatur med norske taster og LED-panel. Switch for tilkobling til XT eller AT. Kan også brukes til PS/2 sammen med adapter PC 2340.

Best. nr.	Pris	3 å	10 å
PC 2351	438.-	348.-	

### Tastaturskjøteledning

2m skjøteledning for AT- og XT-tastaturer.

Best. nr.	Pris	3 å	10 å
PC 2337	24.-	19.-	

### PS/2 tastaturadapter

Gjør at et vanlig AT-tastatur kan kobles til en PS/2-maskin.

Best. nr.	Pris	3 å	10 å
PC 2340	29.-	24.-	

### Microsoft-kompatibel mus

Seriell mus som kobles til serieporten (RS-232). Man kan velge om den skal være Microsoft eller PC-Mouse kompatibel med en bryter. Tre knapper. Leveres med kabel og driver.

Best. nr.	Pris	3 å	10 å
PC 3121	98.-	94.-	

### Musholder

Kjekk lomme til å f.eks. plassere på siden av monitoren, slik at musen ikke ligger i veien. Passer alle mus-typer.

Best. nr.	Pris	3 å	10 å
PC 4025	19.-	16.-	14.-

### Musmatte

Gjør at musen glir jevnt uten å hakke. Forhindrer slitasje på mus og skrivebord, sørger også for at skitt ikke kommer inn i musen.

Best. nr.	Pris	3 å	10 å
PC 4023	29.-	24.-	19.-

### Trackball

Microsoft og PC-Mouse-kompatibel trackball med tre knapper som kan låses individuelt. Driver medfølger.

Best. nr.	Pris	3 å	10 å
PC 3124	298.-	278.-	

### Quickshot joystick

En analog joystick med håndtilpasset grep. 15 pins plugg. Autofire, 2 knapper. Av/på-bryter for sentring.

Best. nr.	Pris	3 å	10 å
PC 1805	159.-	139.-	119.-

### Joystick

Analog joystick med to knapper og justerbar sentring. 15 pins plugg.

Best. nr.	Pris	3 å	10 å
PC 1833	149.-	129.-	99.-

### Gameport for 2 joysticks

Med to 15-pins kontakter, for tilkobling av en eller to analoge joysticks.

Best. nr.	Pris	3 å	10 å
PC 2631	98.-	88.-	68.-

## I/O-KORT

### IDE Multi-I/O kort

Kontrollerkort med 2 serieporter, 1 parallellport, 1 gameport. Kontrollerer opptil 2 harddisker av type IDE (AT-buss) og opptil to diskettstasjoner (360KB til 1.44MB, 3 1/2" og 5 1/4"). Alle porter kan disables hvis ønskelig. Leveres med alle nødvendige kabler.

Best. nr.	Pris	3 å	10 å
PC 2819	198.-	188.-	178.-

### IDE HD/floppykontroller

Kontrollerer opptil 2 harddisker av IDE (AT-BUS)-typen og opptil to diskettstasjoner (360KB til 1.44MB, 3 1/2" og 5 1/4"). Leveres med alle nødvendige kabler.

Best. nr.	Pris	3 å	10 å
PC 2817	98.-	94.-	89.-

### RS-232 serieporter

RS-232 seriell port for tilkopling av modem, printer og terminal. Kan settes opp til COM1 eller COM3. Den har holder for en ekstra UART (som kan settes opp til COM2 og COM4). På PC 3023 er denne montert.

Best.nr.	Pris	3 å	10 å
<b>Med 1 port:</b>			
PC 2659	108.-	98.-	79.-
<b>Med 2 porter (bildet):</b>			
PC 3023	138.-	118.-	98.-

### 2 x seriell / parallell / game

Dette kortet har 2 serieporter (som kan settes opp som COM 1-4), en parallell printerport (kan settes opp som LPT 1 og 2), og en analog game-port for joystick.

Best. nr.	Pris	3 å	10 å
PC 2924	198.-	148.-	

## CACHE-KONTROLLERE

Den rimeligste og enkleste måten å få fart på PC'en. Gjør alle eksisterende harddisker superrask—søketiden blir ca. 0.3 millisekunder! Firedobler hastigheten på diskrevende applikasjoner. Å installere en cache-kontroller har oftest mer effekt enn å bytte hovedkort, og er *mye* enklere!

### SCSI cache-kontroller

Kontroller for 7 HD, 2 FD og 1 tapedrive. Kan plasseres sammen med andre kontrollere uten konflikter, da kortet har egen BIOS uavhengig av hovedkortets. Leveres uten RAM, utbyggbar til 16MB

Best. nr.	Pris
PC 2832	2498.-

### IDE multi-I/O cachekontroller

Kontroller for 4 HD, 2 FD, 1 tapedrive, med 2 serie og 1 parallellport. Kan plasseres sammen med andre kontrollere uten konflikter, da kortet har egen BIOS uavhengig av hovedkortets. Leveres uten RAM, utbyggbar til 16MB.

Best. nr.	Pris
PC 2830	1998.-

### IDE cache-kontroller

Kontroller for 2 HD og 2 FD. Leveres med 512KB cache, utbyggbar til 8,5MB.

Best. nr.	Pris
PC 2828	1398.-

## Fax dine bestillinger til 22 49 02 10!

### 2 x seriell / 1 x parallell

Det samme som over, men uten game-port.

Best. nr.	Pris	3 å	10 å
PC 2923	168.-	158.-	138.-

### 4 x seriellport

Dette kortet har 4 serieporter montert, som kan settes fra COM 1-8. Opptil to slike kort kan monteres i en maskin. Kabler følger med.

Best. nr.	Pris
PC 2841	398.-

### Parallellport

Har en parallell printerport, som kan settes opp som LPT2 eller LPT3 (flyttes av DOS ned til LPT1 hvis du ikke har LPT1 fra før).

Best. nr.	Pris	3 å	10 å
PC 2645	74.-	64.-	59.-

For flere kort, se hovedkatalogen 1992 s. 11

### Centronics relé-interfacekort

Dette interessante kortet kan koples til en vanlig parallellport og styres fra alle typer datamaskiner. Det har 8 Siemens reléer som kan styres individuelt. Disse reléene kan så styre alle spenninger opptil 250V 8A. En LED for hvert relé viser tilstanden. Det trenger strømforsyning 12V 400mA. Skrukoplinger på reléutgangene.

Best. nr.	Pris	3 å	10 å
97 58 77	599.-	569.-	539.-
<b>Mascot 9-15V m/ multiplugg, 500mA</b>			
Best. nr.	Pris		
09 02 62	185.-		

### Digitalt I/O-kort, 48 kanaler

Dette kortet har to stk. 8255 I/O-kretser, som til sammen har 48 fritt programmerbare digitale inn/utganger (med TTL-nivå). Det har 3 uavhengige 16-bits programmerbare tellere som kan telle binært eller BCD i frekvenser fra DC til 5MHz.

Best. nr.	Pris	3 å
PC 2736	398.-	298.-

## MONITOR-ARM

Mekanisk monitor- og tastatur-arm som gir deg frihet til å flytte monitoren og tastaturet rundt på bordet. Meget plass-besparende. Armen frigjør skrivebordet når PC'en ikke er i bruk. Meget stabilt design i hvitlakkert stål med en bæreevne på 25kg. 360° rotasjon på armen og 180° på monitorstativet.

Enkel montering. Alle kablene trekkes gjennom armen. Mål på monitorplataet: 335x285mm.

Best. nr. Pris  
97 99 88 698.-

### Digitalt I/O-kort, 192 kanaler

Samme som over, men 192 kanaler (8 stk. 8255)

Best. nr. Pris  
PC 2738 598.-

### A/D-D/A-kort 12bit

16 kanaler 12 bit multiplekset A/D konvertering med sample/hold-krets. A/D-omformingsiden bedre enn 60µs. 12 bit D/A, spenning eller strømstyrt (kan velges med jumpere). D/A omformingsiden bedre enn 0,5µs. Analoge I/O-områder: Unipolar og bipolar 9V.

Best. nr. Pris 3 å  
PC 2715 698.- 548.-

### A/D-D/A-kort 14bit

Samme som 12 bits over, men D/A oppløsning 14 bit, bedre enn 2µs, og A/D oppløsning 14 bits. A/D omformingsiden bedre enn 28µs. I/O-områder: Unipolar og bipolar 2,5V, 5V og 10V.

Best. nr. Pris 3 å 10 å  
PC 2757 1398.- 1198.- 998.-

Se også hovedkatalogen 1992 s. 4

### EPROM-brenner

Brukes til å programmere (skrive) eller lese EPROMs. Data kan kopieres til/fra disk eller andre EPROMs. Støtter alle typer fra 2716 til 27512. Inkluderer brennerstativ, kontrollerkort, kabler, software og detaljert håndbok. Brennerstativ fås i en- og fire-brikkers utgave.

Best. nr.	Pris	3 å	5 å
<b>Brenner for 4 EPROMs</b>			
PC 2743	1398.-	1198.-	998.-
<b>Brenner for 1 EPROM</b>

## ETHERNET

### Ethernetkort

16-bits kort for thin wire og thickwire Ethernet nettverk, basert på IEEE 802.3 standard LAN. Kompatibelt med Novell NE-2000. Passer til de fleste populære nettverk som f.eks. Novell Advanced Netware, IBM PC LAN, Microsoft MS-NET og FTP PC/TCP. Direkte DMA kontroll, EPROM sokkel for Auto Boot ROM.

Best.nr. Pris 3 å  
PC 4050 1398.- 998.-

### 10Base-T Ethernetkort

16-bits kort for thickwire og twisted pair Ethernet nettverk, basert på IEEE 802.3 standard LAN. Kompatibelt med Novell NE-2000. Passer til de fleste populære nettverk som f.eks. Novell Advanced Netware, IBM PC LAN, Microsoft MS-NET og FTP PC/TCP. Direkte DMA kontroll, EPROM sokkel for Auto Boot ROM.

Best.nr. Pris 3 å  
PC 4060 1398.- 998.-

### Ethernet-terminator

Brukes som avslutning i begge ender av et kabelanlegg. Motstand 50Ω.

Best.nr. Pris 3 å 10 å  
PC 4058 64.- 54.- 49.-

### Boot ROM for Novell V2.15

Brukes for automatisk å boote diskløse nettverksterminaler.

Best.nr. Pris 3 å 10 å  
PC 4056 149.- 129.- 119.-

## RAM-KORT

### 2MB RAM-kort

16-bits RAM-kort med plass for opptil 2MB RAM. Bruker 1024Kb DRAM brikker (ikke inkludert), med plass til 18 brikker. Støtter extended og expanded (LIM/EMS 4.0) memory standarder. Opptil 4 slike kort kan settes på samme hovedkort, for totalt 8MB RAM. Kan også brukes for å fylle konvensjonelt memory fra 512K til 640K. Leveres med software.

Best.nr.	Pris	3 å
PC 2617	598.-	498.-

### 8MB RAM-kort

16-bits RAM-kort med plass for opptil 8MB RAM. Bruker 1024Kb DRAM brikker (ikke inkludert), med plass til 72 brikker. Støtter extended og expanded (LIM/EMS 4.0) memory standarder, og hukommelsen kan deles opp i både extended og expanded. Opptil 4 slike kort kan settes på samme hovedkort, for totalt 32MB RAM. Kan kobles sammen med NEAT EMS, og har mulighet for paritetssjekk.

Best.nr.	Pris
PC 2620	698.-

### 2.5MB RAM-kort

16-bits RAM-kort med plass for opptil 2560KB RAM. Bruker standard 256Kb eller 1024Kb DRAM brikker (ikke inkludert), med plass til 36 brikker. Støtter extended og expanded (LIM/EMS 3.2) memory standarder.

Best.nr.	Pris
PC 3037	398.-

### Centronics 3m han-han, 36 pin

Best. nr.	Pris	3 å	10 å
PC 2213	89.-	75.-	49.-

### Monitor skjøtekabel

15 pinner VGA og SuperVGA 3-radere skjøteledning (han-hun). Lengde 2 meter.

Best. nr.	Pris	3 å	10 å
PC 2007	58.-	48.-	39.-

### 15-9 pins overgangskabler

Kabler for overgang mellom 15 pin VGA-kontakt og 9-pin digital multisynkplugg. Ikke for overgang mellom VGA og EGA.

15-pin han-9-pin han, 25cm.			
Best. nr.	Pris	3 å	10 å
PC 2008	58.-	48.-	39.-

15-pin han-9-pin han, 2m.			
Best. nr.	Pris	3 å	10 å
PC 2009	58.-	48.-	39.-

15-pin han-9-pin hun, 2m.			
Best. nr.	Pris	3 å	10 å
PC 2010	58.-	48.-	39.-

## Overganger 9p-25p

Gjør 9-pins RS-232 porter om til 25-pins og omv.

Best. nr.	Pris	3 à	10 à
<b>9-pin hun-25 pin han</b>			
PC 2225	26.-	22.-	19.-
<b>9-pin han-25-pin hun</b>			
PC 2239	26.-	22.-	19.-

## Overganger D-SUB han/hun

Gjør om kjønnnet på alle D-SUB kontakter.

Best. nr.	Pris	3 à	10 à
<b>25-pin han-han</b>			
PC 2241	29.-	27.-	25.-
<b>25 pin hun-hun</b>			
PC 2243	29.-	27.-	25.-
<b>9 pin han-han</b>			
74 16 20	49.-		
<b>9 pin hun-hun</b>			
74 16 39	49.-		

## Nullmodem adapter

25-pins nullmodem-boks som kopler om alle 7 nødvendige ledere. 25 pin han-hun.

Best. nr.	Pris	3 à	10 à
97 99 96	36.-	29.-	25.-

## Universal floppykabel

Med 5 kontakter for tilkopling av to diskettstasjoner. Med både 5/4" (edge) og 3 1/2" (IDC) plugger.

Best. nr.	Pris	3 à	10 à
PC 2120	36.-	23.-	

## IDE harddiskkabel

For opptil 2 IDE harddisker med 40 pins IDC plugger.

Best. nr.	Pris	3 à	10 à
PC 2125	32.-	28.-	23.-

## SERVICEKIT

### Computer Service Kit 900

Komplett verktøysamling for montering av kort og diskstasjoner, fjerning av IC'er, bygging av PC'er etc. Inneholder 4 skrujern, 2 innersekskantnøkler 3/16" og 1/4", 1 bit-skrutrekker m/ innsats, 1 IC-uttrekker, 1 monteringsverktøy for 14/16-pins IC, 1 pinsett og 1 fjærpinnsett.

Best.nr.	Pris
99 20 62	244.-

### Computer Service Kit 802

Som over, men inneholder 2 skrujern, 2 innersekskantnøkler 3/16" og 1/4", 2 bit-skrutrekker m/ innsats, 1 IC-uttrekker, 1 pinsett, 1 fjærpinnsett,

Best.nr.	Pris
99 20 54	204.-

## MFM harddiskkabler

Best. nr.	Pris	3 à	10 à
<b>34-pol for to harddisker</b>			
PC 2122	19.-	14.-	11.-
<b>20-pol for en harddisk</b>			
PC 2121	14.-	12.-	8.-

## Strømforgreningskabler

For tilkobling av flere driver enn det er ledninger til fra strømforsyningen.

### 1xstor han til 2xstor hun, 10cm

Best. nr.	Pris	3 à	10 à
97 62 70	36.89	35.08	33.20

### 1xstor han til 2xlitte hun, 14cm

Best. nr.	Pris	3 à	10 à
97 62 88	33.-	31.39	29.67

### 1xstor han til 1xstor hun + 1xlitte hun, 10cm

Best. nr.	Pris	3 à	10 à
97 62 96	33.-	31.39	29.67

## TESTUTSTYR

### RS-232 Breakout-boks

For testing av bestykning i RS-232 kontakter. 25 isolerte ledninger gjør det mulig å teste kontakter med ulike pin-kombinasjoner. Inneholder 3 jumperblokker, 12 kontroll-LED'er standard RS-232 bestykningstabell og 25-pols rekke med plugg og kontakt. 16cm kabel gjør det lett å bruke boksen i fri posisjon.

Best. nr.	Pris
98 13 97	259.-

### RS-232 Hurtigtester

Viser med lysdioder tilstanden til alle RS-232 signalene. Grei å ha ved feilsøking i seriell-oppkoplinger. 25 pin han-hun.

Best. nr.	Pris	3 à
PC 3410	128.-	120.-

### RS-232 Joker

Koplingsboks for oppkopling av standard serieporter. 25 pin han-hun.

Best. nr.	Pris	3 à	10 à
98 18 50	139.-	132.-	125.-

## MAC-KABLER

### Mac Phonetet kit

Består av kopplingsboks, Appletalk-kabel og en phonetet-kabel med RJ-11 (telefon) plugger.

Best. nr.	Pris	3 à	10 à
PC 2179	159.-	139.-	129.-

### Mac Appletalk kit

Består av kopplingsboks med maskintilkopling og en Appletalk-kabel.

Best. nr.	Pris	3 à	10 à
PC 2175	199.-	179.-	169.-

### Modemkabel Mac II

For å kople modem (V.24-tilkopling) til Mac II (9-pins DSUB).

Best. nr.	Pris	3 à	10 à
PC 2171	59.-	54.-	49.-

### Modemkabel Mac Plus

For å kople modem (V.24-tilkopling) til Mac Plus.

Best. nr.	Pris	3 à	10 à
PC 2177	59.-	54.-	49.-

### SCSI harddiskkabler

Harddiskkabel for SCSI-harddisker, med en IDC 50pin flatkabelplugg og to Centronics 50pin bøsninger.

Best. nr.	Pris	3 à	10 à
PC 2189	149.-	139.-	109.-

Harddiskkabel for SCSI-harddisker, med tre IDC 50pin flatkabelplugg og to Centronics 50pin bøsninger.

Best. nr.	Pris	3 à	10 à
PC 2191	159.-	149.-	129.-

### SCSI harddiskkabel 25M/50M

Harddiskkabel for SCSI-harddisker, med en D-SUB 25pin plugg (han) og en Centronics 50pin plugg (han).

Best. nr.	Pris	3 à	10 à
PC 2181	79.-	69.-	59.-

### SCSI Daisy-Chain HD-kabel

For å kople flere SCSI enheter i kjede. 50 pin centronics han i begge ender.

Best. nr.	Pris	3 à	10 à
PC 2185	109.-	99.-	89.-

### SCSI forlengelseskabel

Kabel med Centronics 50-pols plugger, han-hun.

Best. nr.	Pris	3 à	10 à
PC 2187	109.-	99.-	89.-

### SCSI Terminator

SCSI terminator endekontakt for Centronics 50 pol.

Best. nr.	Pris	3 à	10 à
PC 2183	79.-	69.-	59.-

For flere kabler, se hovedkatalogen 1992 s. 18-20 og 24-26

## VIFTEREGULATORER

### Noise-Killer viftheregulator

Får din PC-vifte til å bli bortimot lydløs. Koples inn mellom viften og printkortet inne i strømforsyningen, og regulerer ved hjelp av termostat ned hastigheten på viften. Norskprodusert, med livstidsgaranti fra leverandør på det tilkoblede utstyret.

Best. nr.	Pris	3 à
PC 4082	198.-	178.-

### Termostat viftheregulator

Får din PC-vifte til å bli bortimot lydløs. Koples inn mellom viften og printkortet inne i strømforsyningen, og regulerer ved hjelp av termostat ned hastigheten på viften.

Best. nr.	Pris	3 à	10 à
PC 4080	98.-	88.-	78.-

## LAPLINK-ADAPTER

### Laplink-adapter

Gjør at du kan bruke en vanlig printerkabel til å overføre filer med Laplink III Pro (eller senere versjoner). Tre ganger raskere enn å bruke nullmodemkabel, med opp til 2.5MB i minuttet.

Best. nr.	Pris
96 63 55	125.-

Vårt telefonnummer er som vanlig  
**22 49 00 09**

og du kan også sende telefax til  
**22 49 02 10**

**Frithjof Arngren Electronics**  
Boks 2, Holmen, 0322 OSLO

## SWITCH- BOKSER

### 2-veis D-SUB Switch

1 inngang og 2 utganger (eller motsatt). 25 pins D-SUB hun på alle inn/utganger. Solid bryter som kopler alle 25 lederene.

**Best. nr.**    **Pris**        **3 å**  
PC 3359    128.–        98.–

### 2-veis Centronics Switch

1 inngang og 2 utganger (eller motsatt). 36 pins Centronics hun på alle inn/utganger. Solid bryter som kopler alle 36 lederene.

**Best. nr.**    **Pris**        **3 å**  
PC 3275    128.–        98.–

### 4-veis D-SUB Switch

1 inngang og 4 utganger (eller motsatt). 25 pins D-SUB hun på alle inn/utganger. Solid bryter som kopler alle 25 lederene.

**Best. nr.**    **Pris**        **3 å**  
PC 3247    198.–        148.–

### 4-veis Centronics Switch

1 inngang og 4 utganger (eller motsatt). 36 pins Centronics hun på alle inn/utganger. Solid bryter som kopler alle 36 lederene.

**Best. nr.**    **Pris**        **3 å**  
PC 3205    198.–        168.–

### 2-veis Centronics X-kopler

2 innganger og 2 utganger. 36 pins Centronics hun på alle inn/utganger. Solid bryter som kopler alle 36 lederene.

**Best. nr.**    **Pris**        **3 å**  
PC 3352    198.–        148.–

### 2-veis D-SUB X-kopler

2 innganger og 2 utganger. 25 pins D-SUB hun på alle inn/utganger. Solid bryter som kopler alle 36 lederene.

**Best. nr.**    **Pris**        **3 å**  
PC 3345    198.–        148.–

### 2-veis D-SUB autoswitch

Gjør at man kan kople 2 maskiner på samme printer. For Centronics parallelle printere, 2 innganger og 1 utgang. 25 pins D-SUB hun på alle inn/utganger. Drives av parallellporten, og trenger ikke strømforsyning. Lite og hendig format.

**Best. nr.**    **Pris**  
PC 3364    248.–

### 4-veis D-SUB autoswitch

Gjør at man kan kople 4 maskiner på en printer. For Centronics parallelle printere, 4 innganger og 1 utgang. 25 pins D-SUB hun på alle inn/utganger. Drives av parallellportene, og trenger ikke strømforsyning.

**Best. nr.**    **Pris**  
PC 3368    348.–

### 8-veis D-SUB autoswitch

For Centronics parallelle printere, 8 innganger og 1 utgang. 25 pins D-SUB hun på alle inn/utganger. Trenger strømforsyning 9 VAC 1A.

**Best. nr.**    **Pris**        **3 å**  
PC 3369    998.–        798.–

**Mascot Strømforsyning 9V AC, 1A.**

**Best. nr.**    **Pris**        **3 å**  
PC 3370    218.–        198.–

### RS-232 Surge-protector

Beskytter serieport og utstyr mot spenningsspisser ved lyn o.l. De 7 viktigste lederne er beskyttet. 25pin DSUB han-hun.

**Best. nr.**    **Pris**        **3 å**        **10 å**  
98 19 74    74.–        59.–        53.–

### Centronics Line-Booster

Forsterker signalet, slik at mulg kabellengde økes med minst 10 meter. 36 pol Centronics han-hun. Trenger strømforsyning 9VDC 100mA.

**Best. nr.**    **Pris**        **3 å**        **10 å**  
98 06 50    348.–        330.–        313.–

**Mascot strømforsyning 9V DC, 100mA.**

**Best. nr.**    **Pris**  
09 02 57    128.–

### 256k Parallell buffer

Lagrer informasjonen sendt til skriveren, slik at datamaskinen blir ledig for andre operasjoner raskere. 25 pin DSUB hun og 36pol Centronics han. Trenger strømforsyning 9VDC 300mA

**Best. nr.**    **Pris**        **3 å**  
PC 3380    798.–        698.–

**Mascot 9-15V DC strømforsyning m/ multiplugg, 500mA**

**Best. nr.**    **Pris**  
09 02 62    185.–

### Seriell-parallell konverter

Gjør RS-232 signaler om til Centronics parallell, slik at man kan kople en parallell skriver på en serieport. Trenger strømforsyning 9VDC 300mA.

**Best. nr.**    **Pris**        **3 å**  
PC 3385    448.–        398.–

**Mascot 9-15V m/ multiplugg, 500mA**

**Best. nr.**    **Pris**  
09 02 62    185.–

### Parallell-seriell konverter

Gjør Centronics parallell-signaler om til RS-232, slik at man f.eks. kan kople en seriell skriver på en parallellport. Trenger strømforsyning 9VDC 300mA.

**Best. nr.**    **Pris**        **3 å**  
PC 3386    448.–        398.–

**Mascot 9-15V m/ multiplugg, 500mA**

**Best. nr.**    **Pris**  
09 02 62    185.–

## PRINTERE

### Seikosha SP-1900 Plus

9-pins matriseskriver med innebygd traktormater. Hastighet 190 cps i kladdemodus, 40 cps i NLQ.

**Best.nr. Pris 3 å**  
PC 4035 1698.- 1598.-

### Olivetti JP160 blekkskriver

Blekkstråleskriver med 300 dpi, samme oppløsning som laserskrivere. Emulerer HP Deskjet. Raskere enn BJ-10e.

**Best.nr. Pris**  
PC 4038 2698.-

### Arkmater for JP150

Plass til 70 ark.

**Best.nr. Pris**  
PC4039 598.-

### Blekkpatron for JP150

Varighet 1 million tegn (ca. 20 ganger så mye som et normalt fargebånd).

**Best.nr. Pris**  
PC4040 198.-

## MODEM

### 2400 baud eksternt modem

Automatisk Hayes-kompatibelt modem med hastigheter opp til 2400 bps full duplex. Støtter V22, V22bis, CCITT V21, Bell 212A og Bell 103 standarder. Godkjent av Statens Teleforvaltning.

**Best.nr. Pris 3 å**  
PC 4003 1898.- 1798.-

### 2400 baud internmodem

Samme som PC 4003, men internt.

**Best.nr. Pris**  
PC 4000 1798.-

### Internt faxmodem

Samme som PC 4000, men har i tillegg mulighet for å sende og motta Gruppe 3 fax på 9600 baud.

**Best.nr. Pris**  
PC 4001 2998.-

## LYDKORT

### Soundblaster Pro

Standarden innen lydkort, kompatibelt med alle spill og multimedia-programmer på markedet. 22-stemmers FM-synthesizer for musikk. 8-bits DAC for samplede lyder, med maks frekvens 44kHz (mono) eller 22kHz (stereo). MIDI-interface og gameport for tilkobling av joystick. Mikrofon-, CD- og line-inngang med stereo mixer. Utgang til hodetelefoner, stereoanlegg eller høyttalere. ISA-bus CD-ROM interface (passer til Panasonic CR-522). Mange programmer for sampling og avspilling av lyd og musikk, samt drivere for Windows

**Best.nr. Pris**  
PC 5050 1498.-

### Booster-høyttalere

Høyttalere med innebygd 2x4W forsterker, kan kobles til alle 3.5mm hodetelefonutganger. Perfekt for Soundblaster, Amiga eller walkman. Bruker 6V strømforsyning eller 4 baby 1.5V batterier.

**Best.nr. Pris**  
34 95 34 399.-

**Batterier, baby**  
39 24 48 6.-

## CD-ROM

### Panasonic CR-522 ISA

Intern CD-ROM drive til Soundblaster lydort. Overføringshastighet 150KB/s, søketid 390ms. Line-utgang for tilkobling til stereoanlegg/lydort.

**Best.nr. Pris**  
PC 5000 2498.-

### Panasonic CR-501 SCSI

Samme som over, men for tilkobling til SCSI-kontrollere eller lydort med SCSI.

**Best.nr. Pris**  
PC 5010 2698.-

### Kasse for eksternt tilkobling

For de som ikke har plass i PC'en til CD-ROM.

**Best.nr. Pris**  
PC 5005 598.-

### AdLib-kompatibelt lydort

m/ SCSI CD-ROM-kontroller

**Best.nr. Pris**  
PC5016 1098.-

## SCANNERE

### Artec A256C fargescanner

92 dpi scanner med 256 farger, fra palett på 262.144. Max scanningområde (b×h) 64×160mm per scan, men større bilder (opptil 216mm bredde) kan scannes separat og settes sammen etterpå. Støtter TIFF, GIF og PCX grafikkformater. Leveres med program for scanning og retusjering, samt OCR-software for scanning og konvertering av tekst.

<b>Best.nr.</b>	<b>Pris</b>	<b>3 å</b>
PC 4064	2998.–	2498.–

### Artec A400 gråtonescanner

400 dpi gråtonescanner. Max scanningområde (b×h) 105×160mm per scan, men større bilder kan scannes separat og settes sammen etterpå. Leveres med program for scanning og retusjering, samt OCR-software for scanning og konvertering av tekst.

<b>Best.nr.</b>	<b>Pris</b>	<b>3 å</b>
PC 4062	1498.–	1198.–

### Skjøtekabel til Scanner

1.8m skjøtekabel til scannere og andre apparater som bruker 8-pins mini-DIN pluggen.

<b>Best.nr.</b>	<b>Pris</b>
96 59 79	99.50

## COMMODORE AMIGA

Disse maskinene er basert på Motorolas 680x0 serie, og Amiga'ens eget unike vindu-basert multitaskende operativsystem. De har egne koprocessorer som tar seg av grafikk, lyd og I/O (seriell/parallell/diskett/harddisk), mens CPU'en kan bruke ledig buss-tid til andre krevende oppgaver. Dette gjør at Amiga'en kan vise grafikk (animasjoner) og spille lyd uten at det krever noe av CPU'en.

Alle Amiga'ene har grafikkoppløsninger fra 320x200 i 2 farger til 704x560 i 16 farger, og 320x200 til 352x560 i 4096 farger (HAM mode). 4 8bits lydkanaler i stereo, RS-232 serieport, Centronics parallellport, 2 gameporter (hvor en vanligvis brukes til mus), samt utganger for monitor, TV og audio.

Alle Amiga priser er inkludert MVA på 22%!

### Amiga 1200

Commodores nye supermaskin! En ren 32bits datamaskin basert på 68020 prosessoren. Denne maskinen blir levert med versjon 3.0 av AmigaDos med lokalisert Workbench, 2MB 32bits grafikkminne, klokke og kalender. Grafikkortet, Advanced Graphics Array (AGA) gir oppløsninger fra 320x200 til 1280x512 fra 2 til 262000 farger. Den har også egen PCMCIA2-kompatibel ekspansjonsport.

Kan leveres med ferdig installert intern 2½" IDE harddisk på 82MB eller 120MB.

## ALARM-UTSTYR

Se også i hovedkatalogen for 1992 på side 61

### Komplett alarmanlegg

Gjør-det-selv alarmpakke med alt du trenger for å sette opp et helt profesjonelt alarmanlegg. Alt utenom kabel er inkludert: Alarmsentral, 1 IR bevegelsesdetektor som dekker 100 m<sup>2</sup>, strømforsyning, 10W høyttaler-sirene, 3 dør/vindu magnetkontakter, oppladbart reservebatteri og panikknapp.

#### Med alarmsentral HA-841

Best.nr.	Pris	10 å
09 00 63	1599.-	1149.-

#### Med alarmsentral HA-841D

Best.nr.	Pris	10 å
09 00 62	1650.-	1199.-

#### Med alarmsentral HA-871

Best.nr.	Pris	10 å
09 01 64	1799.-	1399.-

### Alarmsentral HA-841

Alarmsentral med fire soner (24-timers, øyeblikkelig, forsinket åpen og forsinket lukket). Slås av og på med nøkkel eller fjernstyring (f.eks. vår eksterne kodelås DK-883). Justerbar alarmvarighet og forsinkelse. Forberedt for batteribackup 12V. Overvåket 12V utgang. To reléutganger og to høyttalerutganger (8Ω) for alarm. Driftsspenning 12V DC, mål 258×170×70mm.

Best.nr.	Pris	5 å	10 å
09 00 55	699.-	489.-	419.-

### Alarmsentral HA-841D

Alarmsentral med fem soner (24-timers åpen, 24-timers lukket, øyeblikkelig lukket, forsinket åpen og forsinket lukket). Slås av og på med kodelås eller fjernstyring (f.eks. vår eksterne kodelås DK-881). Justerbar alarmvarighet og forsinkelse. Forberedt for batteribackup 12V. Overvåket 12V utgang. Dekselet er sabotasjesikkert. To reléutganger og to høyttalerutganger (8Ω) for alarm. Driftsspenning 12V DC, mål 258×170×70mm.

Best.nr.	Pris	5 å	10 å
09 00 57	750.-	525.-	450.-

### Alarmsentral HA-871

Alarmsentral med fire soner som kan slås av og på individuelt (A: 24-timers øyeblikkelig. B: øyeblikkelig. C: øyeblikkelig/forsinket. D: forsinket). Alle sonene kan brukes som normalt åpen eller normalt lukket. Justerbar alarmvarighet og forsinkelse. Slås av og på med kodelås eller med fjernstyring (f.eks. vår eksterne kodelås DK-881). Overvåket 12V utgang. Dekselet er sabotasjesikkert. Forberedt for batteribackup 12V. To reléutganger og to høyttalerutganger (8Ω) for alarm. Driftsspenning 16 VAC, mål 258×172×74mm, vekt 1,9kg.

Best.nr.	Pris	720.-	675.-
09 00 59	899.50		

### Infrarøde detektorer

Passive infrarøde bevegelsesdetektorer PIR-9038. Rimelige detektorer med god sikkerhet. Driftsspenning 8–16VDC 15mA. Alarminngang normalt lukket relé. Sabotasjesikkert. Mål 54×73mm. Vekt 50g.

#### PIR-9038W vidvinkel 90° 12×12m

Best.nr.	Pris	5 å	10 å
09 00 79	299.50	239.50	224.50

#### PIR-9038L lang avstand 24×3m

Best.nr.	Pris	5 å	10 å
09 00 81	299.50	239.50	224.50

#### PIR-9038C 3 stråler 0°, 45° og 90° 12×12m

Best.nr.	Pris	5 å	10 å
09 00 83	299.50	239.50	224.50

### Trykkammerhøyttaler 10W

For alarmsentraler som har 8Ω høyttalerutgang. Ved å bruke høyttalere og ikke 12V sirener får man høyere sikkerhet, da sentralen kan merke om ledningen blir kappet og så sette igang en annen alarm. Fot med vippeledd. Vanntett. Maks 10 W 8Ω. Ø 130mm, lengde 125mm. Sort farge.

Best.nr.	Pris
33 55 25	149.50

### Mini sirene

Sirene med meget kraftig varierende signal, ideell til alle alarmer. Svært høy lyd fra en sirene i så lite format. Driftspenning 6-12V DC, ca 150 mA. Lydtrykk 110dB/1m. Mål 39x39x59mm.

**Best.nr. Pris**  
75 40 21 79.50

### Digital kodelås DK-883

Kodelås til å plassere ved døren el.lign. Firesifret kode med 10.000 kombinasjoner. 3 kodenivåer. Programmerbar. Utgangen slås av eller på når koden taster inn (ikke puls). Driftspenning 8-18VDC 10mA. Mål 114x70x36mm. Leveres med innbygningsboks.

**Best.nr. Pris 5 å 10 å**  
09 00 84 299.50 224.50 199.50

### Digital kodelås DK-881

Kodelås til å plassere ved døren el.lign. Firesifret kode med 10.000 kombinasjoner. 3 kodenivåer. Programmerbar. Utgangen kan velges som sjalter (slås av eller på når koden taster inn) eller puls (når koden taster inn blir utgangen slått på i en kort, justerbar periode og så slått av igjen). Panikkutgang blir aktivisert når to taster trykkes ned samtidig. Sabotasjesikker. Driftspenning 8-18VDC 10mA. Mål 114x70x36mm. Leveres med innbygningsboks.

**Best.nr. Pris 5 å 10 å**  
09 00 85 348.- 261.- 229.-

### Selvforsvarsalarm

For kvinner, eldre, taxisjåfører og andre som trenger et lovlig middel til å avslukke angripere. Alarmen bruker en gasspatron for å lage et øredøvende signal på 115dB, enten kontinuerlig eller i korte støt.

**Best.nr. Pris 10 å 25 å**  
06 01 21 99.50 89.- 79.-

#### Gasspatroner, 2-pack

**Best.nr. Pris 10 å 25 å**  
06 01 23 89.- 79.- 69.-

### JECguard bilalarm

Enkel, men sikker alarm som utløses umiddelbart ved åpning av dører, knusing av ruter, bevegelse av bilen, støt og slag mot bilen samt spenningsforandring. Trenger ingen installasjon, skal kun tilkobles til sigaretttenner. Transportabel, med innebygd 9V batteribackup og 10m fjernkontroll. Intern 120dB sirene, samt mulighet for tilkobling av eksterne sirene.

**Best.nr. Pris**  
05 00 81 798.-

#### Passende mignon-batterier

**Best.nr. Pris**  
61 57 81 7.50

### Electro Guard

Overspenningsbeskyttelse for følsomt elektroutstyr, som TV, hifi, video og ikke minst datamaskiner. Beskytter effektivt mot lyn og andre spenningsforstyrrelser.

**Best.nr. Pris**  
05 00 73 198.-

### House Guard

(Se ovenstående ill.) Slår av og på lys e.l. til vilkårlige tider. Utmerket for folk som er borte over flere dager. Sett en slik på to til fire lamper i huset, og gjerne en radio, og tyvene kan lures til å tro at det noen hjemme.

**Best.nr. Pris**  
05 00 75 398.-

### Light Guard

(Se ovenstående ill.) Har innebygd fotocelle, og kobler automatisk inn strømmen når det blir mørkt. Kan brukes til utendørsbelysning (innendørs montering) eller for å lure innbruddstyver når man er bortreist.

**Best.nr. Pris**  
05 00 79 299.50

## HUS & HJEM

### Video dørcalling

Med dette callinganlegget kan du se hvem som ringer på døren. Den delen som festes ved døren er ikke større enn 84x190x38mm og i enkel, stilig design. Innedelen har en 9cm (3½") skjerm, telefonrør og knapp som kan koples til dørlåsen. De koples sammen med en toleder kabel. Leveres med nettadapter, monteringsmatriell og bruksanvisning.

**Best.nr. Pris**  
26 29 94 4998.-

### Dør-calling

Dør-samtaleanlegg som er meget enkelt å kople opp, da det kun trenger en toleder kabel. Utedelen er vannfast og måler 97x130x35 mm. Innedelen er hvit med innebygde treklangs gong. Den har en knapp som kan koples til døråpner (da trengs ekstra ledning). Mål 107x218x85 mm. Trenger 4 stk mignon 1,5 V batterier eller 6V strømforsyning.

**Best.nr. Pris**  
60 60 57 498.-

#### Passende kabel 2-leder

**Best.nr. meter 10 å 100 å**  
65 01 80 2.50 2.- 1.-

### Harmony dørklokke

Melodidørklokke med 25 innebygde melodier. Spiller en ny melodi for hvert trykk på knappen. Drives med 2 stk 1.5V mignon-batterier eller 8V AC 1A.

**Best.nr. Pris**  
61 26 34 399.50

#### Passende mignon-batterier

**Best.nr. Pris**  
61 57 81 7.50

### Dørklokketransformator

Primærspenning 230V AC 50Hz, sekundær 8V AC 1 A. Passer til Harmony dørklokke (61 26 34).

**Best.nr. Pris**  
61 35 84 250.–

### Ringeknapp

Passer som trykknapp til dørklokkeanlegg. Spenningsområde 1–24V. Sokkel med 2 festeskruer.

**Best.nr. Pris**  
61 35 50 49.50

### NatureLite lysanlegg

Soldrevet lysanlegg med bevegelsesdetektor, som automatisk slår på lyset i 90s når den registrerer bevegelse innen 25m. Fotocelle deaktiverer anlegget under dagslys, mens solcellepanel lader opp batteriene (6V). Lett å installere.

**Best.nr. Pris**  
09 00 65 899.–

### Batteridrevet lampe

Lampe i hvit plast for montering på vegg eller tak. Egnet for garasjer, trappeoppganger, loft og ved strømbrytning. Tenning med snoropheng. Brukes 2 vanlige mono batterier (D).

**Best.nr. Pris**  
06 00 53 39.50

### Drikkevannsfiler

Vannfilter med fem faser som gjør vannet fra springen om til det klareste, friskeste kildevann. Anriker vannet med oksygen, fjerner klor og bismaker med kullfilter og kapillarfilter, og gir mineraler ved zeolittanrikning. To adaptere følger med, slik at den passer til alle standardkraner.

**Best.nr. Pris**  
57 10 08 138.–

### Digital romtermostat

Regulerer romtemperaturer mellom +7° til +35°C gjennom varmeovner og air condition. 6 uavhengige programmer kan legges inn. LCD-panel viser programvalg og klokkeslett. Maks belastning uten relèer 0.5mA, med relèer 61mA. Bruker 4 stk. mignon-batterier (penlight).

**Best.nr. Pris**  
61 59 27 798.–

### Dobbelt kjempetermometer

Dobbelt inne og ute termometer med store, lettleste sifere som er hele 25 mm. høye. Den kan settes opp til å gi alarm hvis temperaturen går over en verdi som du bestemmer. Temperaturområde -50 til +70 °C. Nøyaktighet ±1°C. Ekstern sensor kabel 3 m. Mål 100×100×20 mm. Leveres med batteri og tysk instruksjonsbok.

# HIFI UTSTYR

Se også i hovedkatalogen for 1992 på side 29

## Komplett stereoanlegg

Dette anlegget er meget rimelig med en ytterst akseptabel kvalitet. Det har CD-spiller med display og programmeringsmuligheter. Her er også en remdrevet platespiller, radio med FM og AM, dobbel kassettpiller med hurtigkopiering og mange finesser og grafisk equalizer med uttak for hodetelefon og mikrofon. Max uteffekt er 30W. Alt leveres komplett med rack og fjernstyring.

**Best.nr. Pris**  
05 00 01 2998.-

## 100W høyttalerpar

Nye høyttalere i miniformat med forbløffende god lyd. Disse plassvidunderene kan plasseres hvor som helst, hver av dem er bare 18,5 cm høy. De er også velegnet som satelithøyttalere for romklang i et større anlegg. To-veis system med 100mm basshøyttaler. Maks 100W musikk, 50W sinus. Impedans 4-8Ω. Frekvensområde 35-25.000 Hz. Mål (BxHxD) 115x185x125 mm. Svart utførelse.

**Best.nr. Pris**  
33 76 25 899.-

## 160 W høyttalere

2 treveis bassrefleks høyttalere med avtagbart metallgitter og sølvfargede pynteringer rundt elementene. Med 1 diskant, 1 mellomtone og 1 basshøyttaler Ø 200mm. Maks effekt impuls 160W, musikk 130W og sinus 90W. Impedans 8Ω. Frekvensområde 30-22.000 Hz. Mål 270x450x195 mm. Sort utførelse.

**Best.nr. Pr. par**  
33 69 98 1998.-

## Proff diskotek-mixer

Fire kanalers mixer med massevis av funksjoner: 5 bånd equalizer, ekko, 6 lydeffekter, kryss-fader, automatisk DJ-mikrofon med stemmeforvrengning. Den har følgende innganger: DJ mikrofon, 2 andre mikrofoner, 2 platespillere, 2 CD-spillere, AUX og Camera Audio.

**Best.nr. Pris**  
06 02 00 1998.-

## Diskotek-mixer

Lillebroren til den over. Denne er også en fire kanalers mixer med massevis av funksjoner: 6 lydeffekter (skarp tromme, bombe, pistol, laser, telefon og UFO) og kryss-fader. Den har følgende innganger: 2 mikrofoner, 2 platespillere, 2 CD-spillere, AUX og Camera Audio.

**Best.nr. Pris**  
06 02 01 998.-

## Stereo mixer

En høykvalitets, enkel fire-kanals mixer med nok muligheter for de fleste. To platespiller-innganger, to line-innganger og to mikrofoninnganger. Den har også DIN-plugg for opptak på tape eller kasset. Bruker et vanlig 9-volts batteri (følger ikke med).

**Best.nr. Pris**  
03 00 04 798.-

**Fax dine bestillinger**  
**22 49 02 10**

### Camcorder audio mixer

En firekanals mixer beregnet for å editere lyden på video-opptak. Inngang for mikrofon, line (tape/CD), platespiller og kamera audio. Bruker et vanlig 9-volts batteri (følger ikke med).

**Best.nr. Pris**  
03 00 02 498.-

### Hodetelefon med mikrofon

Hodetelefoner som er ypperlig for DJ'er. 40 mm mylar-høytalere i sorte skumpolstrede skjell. Kondensatormikrofon med justerbar arm. 2 meter kabel går til to 3,5mm jackpluggen. På pluggen til mikrofonen står en liten boks som holder en forsterker med batteri.

**Best.nr. Pris**  
06 00 51 199.50

Overgang 3,5mm til 6,3mm Jack

**Best.nr. Pris**  
73 59 90 A 9.50

### Lommedisko med radio

Sprutsikker gul kassettpiller og AM/FM radio. Mini hodetelefoner følger med. Trenger to mignon (AA) batterier (følger ikke med).

**Best.nr. Pris**  
06 00 49 399.-

## BILSTEREO

Se også hovedkatalogen for 1992 på side 104

### Bil CD-spiller

CD-spiller for bil med PLL radio. Radioen har 18 hurtigvalg og autoscan, CD-delen har repeat, shuffle og intro. Tyverikassett gjør det lett å unngå at noen stjeler den. Opplyst lettest display med klokke. Forsterkeren på 2x25W har fader og separat bass og diskant-justering, line utgang og CD el. Line inngang.

**Best.nr. Pris**  
05 00 30 3499.-

### Bilhøytalere WM 31

Små, kompakte høyttalere med 75mm bredbåndsmembran, ideell til små hattehyller eller som ekstrahøytalere. Tiltalende sort design. Max belastning 2x25W, frekvensområde 100-18.000Hz, impedanse 4Ω. Mål 99x99x111mm.

**Best.nr. Pris**  
31 99 61 298.-

### 3veis bilhøttalere AB8000

Kraftige bilhøttalere med bassrefleks. Full og rik bass gir deg ypperlig HiFi i bilen. Maks belastning 2x100W, frekvensområde 60-22.000Hz, impedanse 4Ω. Mål 250x120x146mm.

**Best.nr. Pris**  
05 00 85 1298.-

Motorstyring

**Best.nr. Pris**  
05 00 87 499.50

### Tele-X antenne

Med denne 30cm antennen for Tele-X satellitten kan man få inn perfekte bilder i hele Norge. Man kan få inn Nordic (TV5), Svensk TV4 og Televerkets nye kanal (når den kommer i gang). Den tar også inn NRK hvis tuneren har D-MAC. Mikrobølge og veggfeste følger med, og antennen koples enkelt i parallell med eksisterende antenne. Alle tunere med frekvensområde mellom 950 og 1750MHz kan bruke den.

**Best.nr. Pris**  
05 00 91 A 899.-

### Satellittfinner sett

Et kompakt, batteridrevet meter hjelper deg raskt til å finne den beste mottakningen. Settet inkluderer også et kompass til å sette opp antennen med. Trenger 10 mignon (AA) batterier (følger ikke med).

**Best.nr. Pris**  
06 00 01 499.-

## TELEFONER

### Kompakttelefon Trend

En elegant telefon for montering på vegg eller lagt ned på et bord. Veggbrakett følger med. Har R-tast, og er klar for televerkets nye tjenester. Glifrie, behagelige taster med tydelige tall. Hvit utførelse.

<b>Best.nr.</b>	<b>Pris</b>	<b>10 å</b>
05 00 67	198.-	149.50

### Bordtelefon Athena

Lekker, marmorhvit utførelse i slagkraftig plast som passer både til kontor og hjemmebruk. Med #, Ø og R-taster. Tonevalgstelefon med 10 minner for de mest brukte numrene.

<b>Best.nr.</b>	<b>Pris</b>	<b>10 å</b>
05 00 64	298.-	249.50

### Høytalende telefon Opal

En toveis høytalende telefon for bord eller veggmontasje. Den lar deg ha hendene frie til andre ting under en samtale. Med #, Ø og R-taster. 10 minner nås ved ett tastetrykk, og ringesignal og volum kan justeres.

<b>Best.nr.</b>	<b>Pris</b>	<b>3 å</b>
05 00 71	598.-	499.50

### Telefon med telefonsvarer

For bord eller veggmontasje. Den er fjernstyrbar med kode for fjernavlytting, og bruker mikrokassetter. 10 minner. Vanlige telefonsamtaler kan spilles inn. Utgående beskjed kan være opptil 2.5 min. Hvit utførelse.

<b>Best.nr.</b>	<b>Pris</b>
05 00 55	699.-

### Telefonsvarer Mark

Enkel og grei telefonsvarer med fjernstyring som bruker kassetter av vanlig størrelse. Utgående beskjed maks 30 sek, og inngående 3 min. Stemmeaktivert innspilling og medhørfunksjon.

<b>Best.nr.</b>	<b>Pris</b>
05 00 33	599.50

### Telefonsvarer Doro 3000

En litt mer avansert modell som viser antall oppringinger på et display. Alle funksjoner kan fjernstyres fra en annen telefon. Bruker mikrokassetter.

<b>Best.nr.</b>	<b>Pris</b>
05 00 39	699.-

**Telefonplugger se side 63-64 i denne katalogen**

### Trådløs telefon Doro

Lite og hendig håndsett med utbrettbar mikrofon og tydelige taster. Tydelige lysende symboler som viser om linjen er opptatt etc. Den har #, Ø og R-taster. Rekkevidde opptil 400m. Kan sperres for utgående samtaler. To batterier følger med—ett lades opp mens det andre er i bruk. Kan også brukes for personsøking mellom håndsett og base.

<b>Best.nr.</b>	<b>Pris</b>
05 00 61	3998.-

### Trådløs telefon Uniden

Lite håndsett med utbrettbar mikrofon. Tydelige tall viser oppringt nummer. Rekkevidden er innendørs 150m og utendørs 300m. To oppladbare batterier gir enkelt batteribytte. Kan sperres for utgående samtaler og til og med brukes som fullverdig interkommunikasjon.

<b>Best.nr.</b>	<b>Pris</b>	<b>3 å</b>
05 00 58	3499.-	2998.-

### Trådløs telefon Sanyo

En intelligent mikroprosessorstyrt trådløs telefon som justerer seg selv for beste lyd kvalitet, har 10 minner og "mute"-funksjon. Også #, Ø og R-taster for televerkets nye tjenester. Rekkevidde 300m. Kan brukes til kommunikasjon mellom håndapparat og base.

<b>Best.nr.</b>	<b>Pris</b>	<b>5 å</b>
05 00 91 B	2998.-	2498.-

## INTERCOM

### Walkie-Talkie

Nye PR-radioer som man ikke trenger lisens for å bruke. Rekkevidde opptil 1 km. 1 kanal 27MHz. Passer f.eks. til kommunikasjon mellom venner, på byggeplassen eller mellom kontor og lager.

Best.nr.	Pr. par	5 par á
05 00 52	698.-	499.50

Se også i hovedkatalogen for 1992 på side 78

### Mobil PR-telefon C-Phone

Et 27MHz PR-apparat med design og funksjoner som en mobiltelefon. Har alle 40 kanaler. Selektivt oppkall med 10000 koder og 10 gruppeanrop. Egen mottaker for nødkanaler. Programmering av nummer og kanaler på hurtigtaster. OBS! For å bruke PR-apparater trenger man lisens. Ring for mere informasjon.

Best.nr.	Pris	3 á	10 á
30 30 33	1999.-	1950.-	1899.-
<b>Passende Antenne</b>			
Best.nr.	Pris	3 á	
20 30 50	348.-	299.50	

PR-utstyr, se også i hovedkatalogen 1992 s. 78-89

### Trådløs intercom

3 kanalers intercom som plugges rett inn i 220V kontakten, og lyden følger ledningene i veggen. Kan brukes fra rom til rom og vanligvis fra hus til hus. "Auto"-knapp som gjør at det ene apparatet begynner å sende hvis det kommer en lyd, slik at den kan brukes som "baby-sitter". Opptil seks apparater kan koples sammen.

Best.nr.	Pris
05 00 36	249.50
Et par (2)	449.-

### Mobil babysitter

Nå kan du lytte til barnet ditt mens du er i hagen eller hos naboen. Senderen plugges inn i 220V på barnerommet, og mottakeren, som ser ut som en personsøker, bærer du med deg. Rekkevidden er på ca. 300m. Babysitteren er talestyrt, d.v.s. at mottakeren bare blir koplet inn hvis det blir en lyd ved senderen. Kan også brukes til mange andre formål, som overvåking av eldre og syke, passe telefon, etc.

Best.nr.	Pr. par
05 00 43	498.-

### Batteridrevet babysitter

Både sender og mottaker går på batteri og er ikke avhengig av å ha 200V i nærheten. De har to kanaler, slik at to par kan brukes samtidig uavhengig av hverandre. Senderen (hos barnet) er talestyrt og slår seg bare på hvis barnet gir fra seg en lyd, og er meget følsom. Nå kan du passe barnet mens det sover i bilen, båten, etc. Leveres med festebraketter, men ikke 9V batterier. Både sender og mottaker kan koples til batterieleminator.

Best.nr.	Pr. par
05 00 46	598.-

### Babysitter 220V

Den perfekte barnevakt. Sender og mottaker plugges rett inn i stikkkontakten i veggen og lyden følger så ledningene i huset. Ingen susing, senderen koples først inn når den fanger opp lyd. Følsomheten og volumet kan justeres og den er meget følsom. Kan også brukes til å passe døren og telefonen.

Best.nr.	Pr. par
05 00 41	398.-

## ANTENNER

### Portabel TV-antenne

Liten antenne med kraftige sugekopper som med enkelhet monteres på campingvogner, biler og båter. Tåler alt slags vær og sterke vinder. 4 meter kabel med plugg er montert på antennen. Den kan festes på overflater i alle vinkler, og vil alltid stå rett. UHF kanal 21-63.

Best.nr.	Pris
06 00 45	398.-

### Bordantenne

Bredbånds antenne for innendørs bruk i høy kvalitet. Kan enkelt justeres for horisontal og vertikal polarisasjon. UHF kanal 21-63.

Best.nr.	Pris
06 00 13	198.-

### Flerelement bordantenne

En smart, liten antenne for innendørs bruk. Antennen har to parallelle 7-elementers blader i matt aluminium som gir ekstra god forsterkning. Dekker alle kanaler UHF 21-63.

Best.nr.	Pris
06 00 17	298.-

### Ferrittstavantenne

En 130mm lang og 10mmØ ferrittstav med spoler for mellombølge og kortbølge montert. Flere spoler kan monteres, og spolene kan flyttes rundt for best mottak (bør limes fast). Induktanse MB 370µH (550-1550kHz), LB 4,1mH (150-280kHz).

Best.nr.	Pris
06 00 03	49.50

**Ferrittstaver**

Runde ferrittstaver med flate spor for MB/LB antenner. Målene er vist som  $l \times d \times d_1$  på tegningen. Stavene kan forkortes med en bauflil.

**00×8×7 mm, permeabilitet 9.2–9.5**

**Best.nr. Pris**  
06 00 19 9.50

**40×10×9 mm, permeabilitet 9.9–10.2**

**Best.nr. Pris**  
06 00 21 14.50

**Erstatningsantenne I**

To rimelige teleskopantenner, en med 6 deler og en med 7. Den med 6 deler er 482mm/105mm lang, 6mm tykk og har et 2.5mm skrueshull (M2.5) opp i bunnen. Den med 7 er 670mm/123mm lang, 7mm tykk og har et 3mm skrueshull (M3) i bunn.

**seksjoner**

**Best.nr. Pris**  
06 00 23 19.50

**seksjoner**

**Best.nr. Pris**  
06 00 25 25.–

**Erstatningsantenne II**

En rimelig 8-dellers teleskopantenne med et roterende ledd. Hele antennen kan skyves ned i apparatet, slik at bare 11mm stikker opp. Antennen er fullt utstrekkt 1040mm høy. Den trenger et hull på 11,35 mm og 210mm fri plass for å få plass til hele antennen når den er sammenslått.

**Best.nr. Pris**  
06 00 27 49.50

**Erstatningsantenne III**

Rimelig 6-dellers teleskopantenne med ledd for bærbar radioer og lignende. Kan erstatte de fleste brekte antenner. Antennen dras ut fra 275mm til 980mm. Monteres i et hull på 9,53mmØ. Selve antennen er 6mmØ.

**Best.nr. Pris**  
06 00 29 39.50

**Erstatningsantenne IV**

Høykvalitets, krommet radioantenne med 10 seksjoner (uten ledd) som kan erstatte mange brekte antenner. Nedslått er antennen 166mm, og den strekker seg ut til 1,31m. I bunnen er antennen 9,5 mm tykk med et 4 mm skrueshull (M4) boret opp i sentrum.

**Best.nr. Pris**  
06 00 31 39.50

**144/430MHz BNC antenne**

En antenne av høy kvalitet for bruk med håndtrancievere som bruker 144/430 MHz. Oppdelt i fem seksjoner. Antennen er 187mm lang sammenslått, noe som er  $\frac{1}{4}$  bølgelengde på 430MHz, og 535mm utslått, som er  $\frac{1}{4}$  bølgelengde på 144MHz. Den har roterbart ledd og en BNC plugg i bunnen.

**Best.nr. Pris**  
06 00 33 98.–

**Fleksibel 27MHz antenne**

Gummiantenne for PR-båndet med god SWR. Lengde 355mm. Antennen ender i en PL259 UHF-plugg.

**Best.nr. Pris**  
06 00 35 148.–

**Fleksibel 2m antenne**

Gummiantenne for 2m-båndet med god SWR. Lengde 175mm. Ender i en BNC-plugg.

**Best.nr. Pris**  
06 00 37 99.50

**FM T-antenn**

Tre typer er tilgjengelig. En med kabelsko, en med coax plugg og en med flat FM-plugg. Alle har 300Ω impedanse.

Best.nr.	Type	Pris
06 00 39	Kabelsko	19.50
06 00 41	Coaxplugg	19.50
06 00 43	Flat plugg	19.50

**Telefonantenne**

En kort, fleksibel gummiantenne for trådløse telefoner der antennen har brukket. Bruker en universell kobling som kan brukes til de fleste antenner. Den skrues utenpå den brukte stumpe av antennen, og kan festes på alle antenner opptil 6 mm i diameter. Lengde 20 cm, sort farge.

**Best.nr. Pris**  
06 00 47 148.–

## Avloddningstråd

I praktisk kunststoffrull. Mål 1,6m×2,5mm (1×b)

Best.nr.	Pris
81 17 85	19.50

**Avloddningstråd, 4-pack**

Best.nr.	Pris
81 17 93	49.50

## Fotoetsesett

Ideell startsett for etsing av printplater med fotobelegg. Layout tegnes med klebetape eller overføringsymboler og belyses med UV-lampe (medfølger ikke).

Innholder printplater med fotobelegg (2 stk 75×100mm, 2 stk 100×160mm, 1 stk 75×100 epoxy), etsemiddel (ammoniumpersulfat), fremkaller, etsekar (210×150mm), layout-folie, sprayboks med loddelakk, klebetape for loddebaner (1mm bred), samt overføringsmerker for loddeøyne (IC-sokler og komponenter). Leveres med utførlig tysk bruksanvisning.

Best.nr.	Pris
52 94 35	199.50

For mer loddeutstyr, se hovedkatalogen 1992 s. 190

## Osram infrarød 250W pære

Osram Nitraphot. For belysning av fototransfer eller andre fotosensitive belegg. Jevn lysfordeling og høy lysstyrke. E27 sokkel, 220V.

Best.nr.	Pris
52 91 41	64.50

## Mignon NiCd-batterier

Sett med fire hurtigladende nikkel-kadmium-batterier i størrelse mignon (AA). 1.2V 500mAh.

Best.nr.	Pris
25 49 40	49.50

## Temperaturmodul

En digital termometermodul med minne for minimums og maksimums temperatur. LCD displayet og elektronikken på ett enkelt printkort med en 16 leders kantkontakt for lodding. Bak printplaten er det festet en brakett som holder batteriet. En temperatursensor er montert på kortet, men denne kan erstattes av en eksternt sensor. Ved hjelp av de 16 koplingspunktene kan man bl. a. sette og vise høy og lav temperaturterskel, få noe til å skje hvis disse blir overskredet (signal, puls og 2kHz utganger), sette oppdateringsfrekvensen eller se den høyeste og laveste temperatur siden siste reset. Den interne temperatursensoren har måleområde fra -5 til +50 °C og nøyaktighet ±1°C. Utførlig engelsk manual følger med. Trenger et vanlig mignon-batteri, følger ikke med.

Best.nr.	Pris	10 å
06 01 71	138.-	99.50

**Eksternt sensor med kabel, lave temp.**  
-40 til +50°C ±1°C

Best.nr.	Pris	10 å

**Eksternt sensor med kabel, høye temp.**  
+20 til +110°C ±1°C

Best.nr.	Pris	10 å
06 01 75	49.50	39.50

# PRINTUTLEGG & DESIGN

## Seetrax Ranger 1

Ranger 1 er et kraftig program som hjelper deg til å designe kompliserte skjemaer eller utlegg. Pakken består av to separate moduler. Den første brukes til skjemattegning og simulering, den andre brukes til printutlegg. For å bruke programmet må man minst ha en PC/XT med MS-DOS eller OS/2, 640k RAM, harddisk, 1.2MB 5¼" diskettstasjon og EGA eller VGA skjerm. Man trenger også en mus eller et digitaliseringsbord. Man kan skrive ut til en plotter med HP-GL, en matriseskriver, en fil eller til en gerber fil. Ranger 1 er menybasert og enkel og bruke og lære. Alle forskjellige design kan konstrueres, alt fra enkle enlags kretser til 16-lags printkort med overflatemonterte komponenter på begge sider. **Schematic Capture:** Makroer for kretser som brukes ofte, 2300 symboler pr. tegning, arkstørrelser fra A1 til A5, opp til 8 ark pr. tegning, mer enn 750 symoler pr. symbolbibliotek, opp til 100 symbolbiblioteker, opp til 256 pinner pr. symbol, 3500 signaler pr. ark, koplinger blir opprettholdt mellom arkene, automatisk komponentliste, delenummer og pinnennummer blir automatisk fordelt.

**PCB Design:** Makroer for kretser som brukes ofte, maks 1400 komponenter pr. kort, multilags kort med maks 16 lag, stort komponentbibliotek, komponentene vises som de ser ut, riktig printbane bredde, komponenter kan flippes til den andre siden av kortet, engelsk eller metrisk mål ned til 0,01 mm, kortene kan være opp til 820×820 mm, legger printbaner nøyaktig med 0,01 mm oppløsning, opp til 256 pinner pr komponent, sikkerhetslagring, silketrykk for begge sider av kortet med delenummerovergang, automatisk gjenkopling av kretsen for kortest mulig banelengde, vindussystem for store prosjekter, maks 8000 koplinger pr kort.

## MÅLETEKNIKK

### Digitalt multimeter HC-26

Enkelt og rimelig multimeter som tilfredstiller de fleste behov. Måler DC spenning 0–200V i to områder, AC spenning 0–500V, DC strøm 0–10A og motstand 0–2M $\Omega$  i to områder. Har også diodetester. Nøyaktighet  $\pm 0,7\%$  DC

Best.nr.	Pris	3 å	10 å
09 01 67	199.50	179.50	149.50

### Digitalt multimeter DM-206

Et litt mer avansert multimeter som dekker behovet for hobby-elektronikk og skolebruk. Det måler DC spenning 0–1000V i 5 områder, AC spenning 0–750V i to områder, DC strøm 0–10A i tre områder og motstand 0–2M $\Omega$  i 6 områder. Har også gjennomgangstester med tone, diodetester og "data hold". Nøyaktighet  $\pm 0,5\%$  DC

Best.nr.	Pris	3 å	10 å
09 01 75	399.50	359.50	279.–

### Digitalt multimeter HC-3500T

Dette multimeteret har omtrent alle muligheter man kan tenke seg. Det måler DC spenning 0–1000V i 4 områder, DC strøm 0–20A i 3 områder, AC spenning 0–750V i 4 områder, AC strøm 0–20A i tre områder, motstand 0–2M $\Omega$  i 6 områder, temperatur –20 til +1200°C, kapasitans 0–20 $\mu$ F i 3 områder og frekvens 0–200kHz i 2 områder. Det har også gjennomgangstester med tone, diodetester, transistortester ("hfe"-måler) og "data hold". Nøyaktighet  $\pm 0,5\%$  DC

Best.nr.	Pris	3 å	10 å
09 01 71	699.50	629.–	559.–

### Digitalt lommemultimeter

Lite og greit digitalt multimeter til en rimelig penge. Leveres i praktisk lomme-etui. Måler DC spenning 0–450V, AC spenning 0–450V og motstand 0–2M $\Omega$ . Har også gjennomgangstester.

Best.nr.	Pris
13 59 50 A	299.–

### Analogmultimeter HC-1015B

Enkelt og greit lite multimeter som passer i enhver verktøykasse. Måler DC spenning 0–1000V ( $R_i=10k\Omega$ ), AC spenning 0–100V ( $R_i=4k\Omega$ ), DC strøm 0–250mA, motstand 0–1M $\Omega$  og desibel –20 til +62 dB (AC volt). Har også batteritester for 1,5V og 9V småbatterier.

Best.nr.	Pris	3 å	10 å
09 01 85	99.50	89.50	79.50

Flere multimeter i hovedkatalogen 1992 s. 40–47

### 20MHz Oscilloskop

Profesjonelt oscilloskop som tilfredstiller alle krav til en rimelig pris. Massevis av muligheter og enkel å bruke. To kanaler, vertikal følsomhet 5mV–20V/div, tid/div 0,2 $\mu$ s–0,5s, kanalseparasjon bedre enn 60dB ved 1kHz

Best.nr.	Pris	5 å
09 01 57	3499.–	2999.–

Passende probe OP-20, 1:1 og 1:10

Belysningssett for 6 og 12 V med 2 pærer å 6V

Best.nr.	Pris
13 50 11	29.50

### Galvaniseringssett

Med dette settet kan du selv galvanisere, forgylle (24 karat) og forsølve printbaner, plugg, mynter, smykker etc. Forgylte plugg blir aldri korrodert, og gir mye bedre ledeevne og sikkerhet. Bruker industristandard tampong-galvanisering. En flaske gull-elektrolytt på 30ml dekker en flate på ca. 270cm<sup>2</sup>. Sølv dekker vesentlig mer. Strømforsyning 2 baby (C) batterier på 1,5V eller 3VDC batterieleminator med 2,5mm plugg. Settet inneholder Galvaniseringsapparat med edelstål hode, 30ml gull-elektrolytt, 30ml sølv-elektrolytt, 15ml pussemiddel, 2 svamper, testobjekt (barberblad) og bruksanvisning.

Best.nr.	Pris

## BYGGESETT & DIVERSE

### Mini Videokamera

Et meget lite CCD videokamera som gir et klart sort/hvitt bilde fra vanlig lys eller infrarødt lys (940nm). Det 8,5 mm store CCD elementet gir gode detaljer. Med infrarødt lys er det ideéllt for sikkerhet og overvåkning. All optikk er innebygd i elementet, så man trenger ingen linser. Det ferdige settet består av et printkort med kameraet på som måler 95×60 mm, og et styringskort 110×95mm. På siden av kameraet står det 6 IR lysdioder som gir kameraet nok infrarødt lys til å operere i stummende mørke på avstander fra 2–3m. Hele settet trenger kun 10–14V uregulert 200mA. Det trenger kun en treleders skjermet kabel, med felles jord, strømforsyning og videosignal. Videosignalet er vanlig 1Vp-p.

**Best.nr.** Prs  
06 00 61 1998.–

### Stepmotor

En 12 volts, 4-fasers unipolar stepmotor ideéll til små roboter o.l. En passende driver for den er SAA1027. Step 7,5°, fasestrøm 130mA, fasemotstand 94Ω, induktans 43mH, dynamisk moment ved 10pps 80g/cm, responsfrekvens 300pps, vekt 57g, mål 3mmØ×25mm

**Best.nr.** Prs 10 á  
06 01 67 250.– 199.50

### Stepmotor byggesett

Et sett som inneholder stepmotoren over, en SAA 1027 driverkrets og passive komponenter. Det gjør at stepmotoren blir mulig å styre med vanlige spenninger. Drives av 12V.

**Best.nr.** Prs 10 á  
06 01 65 398.– 350.–

### Numerisk tastatur

Med 12 taster som presser på gummiplater med ledende silikon og gir et klikk når de trykkes ned. Utv. størrelse 51×64×13mm, monteringsåpning 46×59mm. Bryterene tåler 24V 5mA. Kontaktmotstand maks 200Ω.

**Best.nr.** Prs 10 á 100 á  
06 01 33 39.50 29.50 19.50

### Microsonic Audio Booster

Et byggesett til en lydforsterker som forsterker svake lyder og lyder langt borte. Den stiller selv styrken på forsterkningen etter hvor høy lyden er, slik at man ikke trenger å stille på volumet hele tiden. Utgang for hodetelefon (ikke inkl.). Bruker et vanlig 9V batteri (følger ikke med).

**Best.nr.** Prs  
06 00 87 299.50

### Motstandssortiment 6000

Perfekt for elektronikkentusiasten som ønsker å ha orden i sakene. Inneholder 6000 1/4W kullsjiktet motstander, fordelt på 60 forskjellige verdier innen normrekke E12 fra 12Ω til 80MΩ. Dessuten medfølger et sortimentsmagasin i metall med 60 skuffer i klarplast og etiketter. Mål 552×307×145mm.

**Best.nr.** Prs  
41 91 17 699.–

## FUNTRONICS BYGGESETT

Et utvalg med 10 prosjekter for den absolutte begynner. Trenger ingen lodding og bare et minimum av verktøy. En liten skrutrekker, en tang og en avbiter er vanligvis alt som trengs. Komponentene og ledningene blir holdt fast av skruer som skrues ned i hullene i plastplaten som følger med alle settene. En tegning av kretsen følger med og legges på platen. Alt er inkludert utenom et vanlig 9V batteri og verktøy. Alle settene har engelske instruksjoner.

### 1. Pære og sikringstester

Et meget enkelt sett som tester pærer, sikringer, brytere o.l. Hvis det som testes virker, så blir en lysdiode tent.

**Best.nr.** Prs  
06 00 67 49.–

### 2. Transistortester

Dette settet viser deg hvordan en transistor virker, og kan brukes til å teste transistorer og dioder for å se om de virker.

**Best.nr.** Prs  
06 00 69 49.–

### 3. Vanndetektor

Dette lille settet er ideéllt til å sjekke at det er vann i jorden til potteplanter etc. og gir et synlig signal med en lysdiode hvis det ikke er vann der.

**Best.nr.** Prs  
06 00 71 49.–

### 4. Lys/mørke-indikator

Dette settet slår på en lysdiode hvis det er mørkt i rommet. Det kan også modifiseres til å slå på lysdioden hvis lysstyrken er over en viss verdi. Kan for eksempel brukes i et mørkerom.

**Best.nr.** Prs  
06 00 73 89.–

### 5. Blinker

Dette er en astabil krets som slår av og på to lysdioder i tur. Lysdiodene vil blinke hvert 2. eller 3. sekund. Kan for eksempel brukes til varsellys ved en overgang i en modell jernbane.

**Best.nr.** Prs  
06 00 75 49.–

## 6. Elektronisk sirene

Denne er ideell til modellbiler o.l. Den gir en lyd som kan varieres i frekvens, og kan settes opp til å lage flere forskjellige sirene-lyder.

**Best.nr. Pris**  
06 00 77 89.-

## 7. Hundefløyte

Settet bruker en astabil multivibrator til å lage en lyd som varieres med lysstyrken. Om natten kommer det en meget dyp tone, men i dagslys kommer det en tone som er så høy at mennesker vanligvis ikke kan høre den. Med en enkel modifikasjon kan denne brukes som en sirene som kaller på hunden.

**Best.nr. Pris**  
06 00 79 98.-

## 8. Tosidet terning

Enkel multivibrator-krets som startes ved å holde to ledninger sammen. To lysdioder blinker da så fort at det ser ut som de lyser hele tiden. Når ledningene tas fra hverandre vil en minnefunksjon gjøre at en av lysdiodene vil lyse. Lysdiodene kan merkes med "ja/nei", "krone/mynt" etc.

**Best.nr. Pris**  
06 00 81 49.-

## 9. Morse-apparat

En astabil multivibrator som gir en hørbar lyd på flere hundre hertz. Når du trykker på bryteren vil det komme en lyd og en lysdiode blir tent. Dette settet kan hjelpe deg å lære morsekode og snakke med andre med dette spesielle "språket". Settet er ikke en radiosender.

**Best.nr. Pris**  
06 00 83 98.-

## 10. Musikkmaskin

Et enkelt elektronisk orgel som spiller ti noter, som er nok til å spille en del enkle melodier. Man bruker en pinne som man berører noen skruer med for å spille. Kretsen er en astabil multivibrator som kan lage lyder i mange frekvenser.

**Best.nr. Pris**  
06 00 85 89.-

### The Electronics Workbook

Tools, Testers and Tips for the Hobbyist  
by Delfin T. Horn

This book is a complete guide to selecting electronic test and circuit design equipment, and provides you with a complete overview of everything you will need to know to design a permanent or portable workbook that best suits your specific needs.

The following major categories are covered: multimeters, frequency meters, signal injectors and tracers, digital test equipment, oscilloscopes, LCR bridges and capacitor test meters, signal generators and semiconductor testers and much more. Throughout, detailed explanations of the characteristics and capabilities of the various models are included. Whether you are an electronics hobbyist or a professional technician setting up your own shop, this book can save you time and money by giving you a reliable set of guidelines with which to choose the right equipment. Warning: references may be made to the American standard 110V AC mains supply. You should translate these into the English 240V AC mains standard and take the appropriate precautions with the high-voltage level.

Best. nr. 07 10 46  
Pris 298,-

### Practical Electronics for GCSE

by Dwen Blahop

This course of practical electronics by the author of many successful books in computing and electronics is designed for GCSE Electronics and the Electronics component of Technology courses. It offers them a comprehensive course of fully documented electronics practicals yet made available at this level. It is completely up to date with current techniques, equipment and approaches, with an extensive range of fully illustrated practical exercises, projects and open-ended investigations accompanied by the background information and essential theory required. The desk workshop companion.

1989, 208 pages, 280 x 207mm, illustrated.

Best. nr. 07 10 49  
Pris 139,-

### GCSE Electronics

by Tom Duncan

Electronics is the most vital and rapidly growing area of modern technology, with major effects on everyday life, commerce and all types of industry. This comprehensive textbook, written by an author world-renowned for his books on physics and electronics. The book is fully

up to date with current developments in the subject. It is designed to meet the requirements of all GCSE Electronics and the Electronics component of Technology courses. Develops the subject logically from first principles through to electronics systems, with reinforcement questions (and answers) throughout. Has useful references for practical aspects of the course. Contains check lists of learning objectives and additional banks of questions (with answers and explanations) at core and further levels, so that students can monitor the progress throughout the course.

1989, 180 pages, 280 x 210mm, illustrated

Best. nr. 07 10 52  
Pris 139,-

### Electronics For You

by Michael McLoughlin

This book provides the reader with a practical course for GCSE, TVEI or CPVE, backed up by clear exposition. The text is based on analysis of all current GCSE Electronics syllabuses. The book contains over 70 interesting projects, each of which are carefully introduced. Sections of work are graded on three levels. There are over 1000 photographs to reinforce understanding.

1989, 256 pages, 271 x 200mm, illustrated.

Best. nr. 07 10 55  
Pris 139,-

### Protection of Electronic Equipment

Edited by W.S.E. Mitchell

This technical monograph is intended as a guide for the protection of electronic equipment against the potentially harmful effects of wide-ranging environmental and electrically-induced conditions. Individual chapters are written by specialists in their particular fields, covering such areas as protection against climatic and mechanical environments, hazardous areas (chemical, etc.), electromagnetic and RF interference, electrostatic discharge, surges and transients on power or signal lines, thermal protection and management and special requirements relating to micro-electronic devices. There is good advice on design and make up well thought-out cable boms taking all these precautions into account and not simply string things together with haphazard wiring!

1989, 96 pages, 210 x 148mm, illustrated.

Best. nr. 07 10 56  
Pris 89,-

### From Atoms to Amperes

by F. A. Wilson

This book explains in crystal clear terms the absolute fundamentals of electricity and electronics. Really helps you to discover and understand the subject perhaps for the first time ever. Have you ever wondered about the link between electricity and magnetism? Felt you could never understand the work of Einstein, Newton, Boltzmann, Planck and other scientists? Just accepted that an electron is a little black dot? Got mixed up with e.m.f. and p.d.? Thought the idea of holes in semiconductors is a bit much? Then help is at hand with this inexpensive book, in as simple a way as possible and without too much complex mathematics and formulae.

1989, 244 pages, 178 x 110mm, illustrated.

Best. nr. 07 10 61  
Pris 59,-

### Collins' Dictionary of Electronics

by Ian R. Sinclair

The science and technology of electronics have an increasingly important role to play in all departments. This dictionary is designed for all who need a guide to the subject, including advanced school students and those embarking on further education courses, as well as technicians and hobbyists. Contains over 2,000 entries, from aberration to zero error, includes over 1,000 diagrams, with lists of symbols used in electronics; microprocessor technology, digital electronics, telecommunications, hi-fi, radio and television, plus coverage of the concepts of devices and of the theoretical background of the subject.

The form of the dictionary has been set out so as to make it easier to find an explanation of a device or principle under one heading rather than requiring the user to fill from one heading to another, picking up pollen fragments of information from each. In addition cross references guide the reader to other related entries.

1988, 376 pages, 202 x 130mm, illustrated.

Best. nr. 07 10 67  
Pris 89,-

### The Illustrated Dictionary of Electronics

by Rufus P. Turner and Stan Gibilisco

This collection of terms is the most comprehensive dictionary available. Including all practical electronics and computer terms, it is as up-to-date as the latest advances in the field itself! Tables and data on subjects most often consulted for projects and experiments are included. Other contributions include English/metric and metric/English conversions for units of measure of energy, power, and volume, and Fahrenheit/Celsius temperature conversion charts.

Setting this edition apart from other electronic dictionaries is its emphasis on illustration. Featuring packed with over 450 detailed drawings and diagrams.

All entries are listed in alphabetical order. Abbreviations and initials are listed in sequence with whole words, all terms of more than one word are treated as one word, and catch words for the first and last entries appear at the top of each page to give you quick and easy access to all terms.

It's all here—more than 27,000 terms used in electronics today!

1991, 730 pages, 234 x 186mm, illustrated.

Best. nr. 07 10 70  
Pris 388,-

### Analog Electronics Explained

by Ian Hickman

Good all-round electronics designers are hard to find according to the recruitment departments. There are good specialists in one field, e.g. microwave, power supply, or microcomputers. Many young designers are lured away from fundamental electronics to the more glamorous 'digital work'. Yet there are still many simple requirements for which a purely analogue realisation is cheaper and more reliable than an microprocessor based solution. In this book the author includes many examples from his large collection of circuits built up over many years, selected for their usefulness in a wide range of applications. They are practical analog circuits, complete with component values in many cases, representing over a quarter of a century of working experience packed into a single volume. But the book is also completely up-to-date and with the latest developments and techniques, and will enable the reader to work as easily (familarity with the circuitry and how it works—and also why it fails!) as should do so.

The book is intended for anyone already involved in electronics, either as a hobby or professionally—amateurs, students, technicians, graduates and even chartered engineers will all benefit from reading this book.

1990, 342 pages, 250 x 192mm hard cover, illustrated.

### Practical Digital Electronics

by Mike Tooley

This book is a practically based introduction to digital electronics for enthusiasts. It contains constitutional details on nine test gear projects including a logic probe, current tracer, digital IC tester, pulse generator, and a bench PSU. All of the projects are fully explained with circuit descriptions, testing procedures, layout, wiring and parts lists. The main part of the book however, covers basic logic gates, monostable and bistable devices, timers, microprocessors, memories, input and output devices and interfaces. This includes BS232 and IEEE-488 information. The text is liberally sprinkled with diagrams, tables and charts, and is easy to read without too much technical trivia. Also given are pre-cuts for the 74 and 4000 series IC's, and a handy to help to ASCII conversion chart.

1988, 208 pages, 218 x 138mm, illustrated.

Best. nr. 07 10 76  
Pris 129,-

### Digital Logic Gates and Flip-Flops

by Ian R. Sinclair

This book, intended for enthusiasts, students and technicians, seeks to establish a firm foundation in digital electronics by treating the topics of gates and flip-flops thoroughly and from the beginning. This is not a constructor's book in the sense of presenting circuits to build and use. It is for the user who wants to design and troubleshoot digital circuitry with considerably more understanding of principles than the constructor, and who wants to know more than a few dots of thumb about digital circuits. Topics such as Boolean algebra and Karnaugh mapping are explained, demonstrated and used extensively, and more attention is paid to the subject of synchronous counters than to the simple but less important ripple counters. No background other than a basic knowledge of electronics is assumed, and the more theoretical topics are explained from the beginning, as also are many working practices. The book concludes with an explanation of microprocessor techniques as applied to digital logic.

1989, 198 pages, 218 x 138mm, illustrated.

Best. nr. 07 10 79  
Pris 159,-

### Electronic Circuits Pocket Book

Volume 1  
by Roy Marston

A vast range of linear ICs is now readily available for use by both amateur and professional design engineers and technicians. This information packed book is a single-volume applications guide to the most popular and useful of these devices, and presents a total of 625 diagrams, tables, and carefully selected practical circuits, backed up by over 50,000 words of highly informative text. It deals with many strictly linear ICs such as op-amps, audio pre-amplifiers, power amplifiers, signal conditioners and power supply regulators, etc., as well as various hybrid combinations, which use a mixture of linear and digital devices, such as the 555 timer IC, bargraph display drivers, CCD delay lines, function and waveform generators, phase-locked-loops (PLLs), and power control ICs. Each subject is treated in an easy-to-read, concise, highly practical and non-mathematical manner. Each chapter deals with a specific type of device or a class of circuit, by firstly explaining the basic principles of its subject and then going on to present the reader with a wide spectrum of applications circuits and tables, each covered by adequate text.

Great emphasis is placed on practical user information and circuitry throughout, and most of the ICs and other devices used in the practical circuits are modestly priced and readily available, with universally recognised type numbers.

1981, 336 pages, 197 x 95mm hardcover, illustrated.

Electronic Signals and NEW Systems

Television, Stereo, Satellite TV, Automotive by Stan Prentiss

Understand electronic signals is much more than just simply illustrating waveforms from selective sources and describing them. To fully define signal characteristics, you must also have a working knowledge of the equipment producing the signals.

This book presents a detailed study of signal analysis as it applies to the operation and signal generating capabilities of today's most advanced electronic devices, including spectrum analyzers, digital storage oscilloscopes, logic analyzers, high-end multimeters, frequency counters, transmission coaxial cable, fibre-optics, AM and FM modulation, stereo multiplexing, vectors, television antennas, satellite earth terminals, data traffic, transponder distortion, stereo separation, and multiple and satellite master antennasytems. Also covered are conventional distributors, fuel injection and turbo and superchargers. The book provides a fresh insight into both the commercial and consumer aspects of electronics that you won't find in any other volume. 1991. 325 pages. 235x188mm, illustrated.

Best. nr. 07 11 21 Pris 248,-

NEW Preamplifier and Filter Circuits

by R.A. Perfol

This book provides both circuits and background information for a range of preamplifiers, together with tonecontrols, filters and mixers etc. to go with the amplifiers. The use of modern, low noise operational amplifiers and a spectral, high performance audio preamplifier (IC) results in designs having excellent performance but which are still quite simple. All the circuits featured can be built at quite low cost, in most cases, for just a few pounds.

The preamplifier circuits include those for a wide range of microphones; magnetic cartridge pick-up preamplifiers with RIAA equalisation; crystal or ceramic cartridge pick-up preamplifiers; a guitar pick-up preamplifier and a cassette tape head preamplifier. The other circuits include an audio limiter; passive and active tone controls; PA highpass and lowpass filters; "scratch" and "rumble" filters; loudness control; audio mixers and volume and balance controls. In fact, everything you need to put together your own, custom preamplifier system.

No physical construction details are provided for the circuits, only the circuit diagrams, so the book is not suitable for absolute beginners. On the other hand the circuits are pretty simple, and you do not need much previous experience of project construction, in order to tackle them. Where appropriate any setting-up procedures and notes on any tricky aspects of construction are provided.

Best. nr. 07 11 15 Pris 69,-

Filter Handbook - A Practical Design Guide

by Stefan Newladowski

This book is a guide to electronic filter design and implementation, clearly written and without the enormous amount of mathematics usually found in books on this subject. With many outstanding features, the handbook covers passive and active filters, and contains computer programs to aid the design process. Outlines practical problems of implementing filters and how to overcome them, using simulation and measured results. Contains many working examples of filter designs for use at radio and audio frequencies. Explains the principles in a way that requires no advanced mathematical knowledge.

Helps in the selection of the optimum filter response to meet a design requirement. Deals with switched capacitor and switched resistor filters. Includes a useful catalogue of pre-calculated tables. 1989. 195 pages. 253x190mm, illustrated.

Best. nr. 07 11 18 Pris 438,-

A Practical Introduction to 2nd Edition Electronic Circuits

by Martin Hartley Jones

Electronics is many people still contains an element of mystery, particularly when mathematics comes to the fore. This book dispels much of the mystery with its down to earth practical approach in presenting the various building blocks of electronics. Mathematics is limited to a basic course covering Ohm's Law and a little calculus. Fourteen chapters covering amongst other subjects: amplification, thermionic valves, negative feedback, impedance matching, differential amplifiers, power supplies, integrated analogue and digital building blocks, pulse circuits and microcomputer circuits.

1985. 278 pages. 245 x 174mm, illustrated.

Best. nr. 07 11 06 Pris 229,-

Electronics Sourcebook for Engineers

by George Loveday

This book is a sequence of concise explanatory texts arranged in alphabetical order. It is a guide to all the important topics in modern electronics. Each explanation is as self-contained as possible, but many cross references are made to closely allied topics to help to establish the various interrelationships between the topics. Particular emphasis on component data and practical circuits. 1986. 294 pages. 245 x 195mm, illustrated.

Best. nr. 07 11 09 Pris 248,-

NEW Practical Electronic Filters

by Owen Blahop

Filters play a vital part in almost all electronic circuits, this book deals with the subject in a non-mathematical way. It reviews the main types of filter, explaining in simple terms how each type works and how it is used.

The book also presents a dozen filter-based, practical projects with applications in and around the home or in the constructor's workshop. These include an audio sequencer and a multi-voiced electronic organ. Project descriptions include circuit diagrams, explanations of their operation, and detailed instructions for building them. A number of the projects are suited to the beginner while some will be of interest to the more advanced constructor. Concluding the book is a practical step-by-step guide to designing simple filters for a wide range of purposes, with circuit diagrams and worked examples.

1991. 104 pages. 178 x 111mm, illustrated.

Best. nr. 07 11 12 Pris 69,-

Principles of Electronics

by B. Dowling

Developing from first principles an understanding of the properties, performance and operating capabilities of an extensive range of modern digital and analogue devices, circuits and sub-systems. This ideal introductory text for undergraduate students includes a balanced coverage of both digital and analogue electronics. Six graduate chapters on digital electronics form a descriptive introduction through to combinational and sequential logic circuits. A comprehensive treatment of Op-Amps is supported by separate chapters on amplification and feedback, and some specialist areas such as power supplies and power devices are not forgotten. Three introductory chapters cover semiconductor theory, the BJT and FETs. Numerical working examples throughout the text with end-of-chapter problems.

1988. 509 pages. 235 x 175mm, illustrated, hardback.

Best. nr. 07 11 00 Pris 348,-

NEW Electronics Principles and Applications

by Graham Giller

This is a comprehensive review of electronics, emphasising both the underlying fundamentals and the applications of electronic components and circuitry. The book is equally suitable for the hobbyist and student of a level, BTEC level 3, and first year degree course. In order that the reader does not get lost in mathematics, and hence conclude that electronics is a confusing subject, the working is more explicit than might be usual, but this essential mains is included as required for the subject. Divided into six main chapter groups, the book covers basic electronic, semiconductor, operational amplifiers, digital electronics, audio circuitry, and radio and data transmission. There are also glossaries of mathematical symbols and abbreviations, and abbreviations used in electronics, and the S.I. system of units, with references for further reading. 1991. 274 pages. 229 x 152mm, illustrated.

Best. nr. 07 10 91 Pris 229,-

Electronics

by Harry Kybett

The second edition of this self-teaching guide that leads you through the basic principles of modern electronics without going into complicated mathematics. The guide shows you how to design your own working circuits. American book. 1986. 304 pages. 252 x 170mm, illustrated.

Best. nr. 07 10 94 Pris 198,-

Practical Electronics

by Barry Woodard

This book covers many electronic components detailing their attributes, ratings and typical applications. There are sections on Resistors and Capacitors, Inductors and Transformers, Power Supplies, Transistors, Thyristors and Triacs, Pulse Shaping, Amplifiers, Logic and Digital Electronics, and also Measurements and Fault Diagnosis. Each section is complemented by a series of practical exercises for which typical results are given later in the book. This book is ideal for Students and Teachers alike. 1984. 260 pages. 230 x 150mm, illustrated.

Best. nr. 07 10 97 Pris 198,-

NEW Electronics

by G. Waterworth

This book is primarily intended as a text for electrical engineering students, but is equally useful for the amateur hobbyist and as a companion volume to 'Electric Circuits'. WZ07H describes all the common semiconductor devices, how they work and how they are used in various circuit schemes. The topics are arranged in the traditional order for semiconductor devices: diodes, BJTs, FETs and op-amps, followed by their applications in a variety of electronics subsystems such as amplifiers, oscillators, non-linear circuits, power amplifiers, regulated power supplies, power electronic systems, combinational and sequential logic circuits. This should enable the reader to use these worked examples alongside any of the standard textbooks in electronics. The author has attempted to give an engineering approach to the subject by including questions that have a sound application and a realistic solution. Examples are included for both discrete and IC devices. The book uses up-to-date techniques and devices and includes questions on mirror, bootstrapping, the constant current source, the differential amplifier, instrumentation amplifiers, IC regulators, switch mode regulators, chopper control, programmable logic arrays, synchronous counter design, and logic hazard detection. 1991. 257 pages. 275 x 210mm, illustrated.

Best. nr. 07 10 85 Pris 179,-

NEW Electric Circuits

by Noel M. Morris and Frank W. Senior

This book is one of a series for use by students, notably as a textbook but also as a guide to good practice in the solution of problems. The topics selected are the most popular areas in first year HND and HNC courses in Electrical and Electronic Engineering. While much of the mathematics is on the heavy side, many electrical engineering terms and circuit theory analyses are clearly and concisely described and illustrated. The topics covered include basic electrical and mechanical units, circuit theory including mesh current and node voltage analysis, alternating waveforms and Fourier analysis, and then, following reactance, susceptance and admittance, AC circuits in depth. Also series and parallel circuits, resonance and frequency response. You also introduce to the concept of apparent power, power, reactive VA, the power factor improvement.

Two chapters are devoted to circuit theorems, including mesh current and node voltage analysis applied to AC circuits, Millman's theorem, Thevenin's theorem, Norton's theorem, duality, star-mesh and mesh-star transformations, superposition theorem, reciprocity theorem, compensation theorem, and the maximum power transfer theorem. Coupled circuits and systems transformer are covered, as are polyphase systems, symmetrical components, and the measurement of power. Four appendices cover complex numbers, matrices, determinants and partial fractions. 1991. 370 pages. 275 x 215mm, illustrated.

Electronic Systems and T. Ibrahim

by K. F. Ibrahim

Covers the Level 2 and 3 syllabus of the BTEC and City and Guilds 224 Electronics Servicing course, but makes a useful reference guide for those interested in designing and building their own circuits. The book starts from the basic knowledge of Ohm's Law, waveform and generation technology, progressing to a sound understanding of electronic equipments. It is a good textbook for radio, television, audio and power generation, containing over 300 line drawings. 1987. 276 pages. 246 x 189mm, illustrated.

Best. nr. 07 11 24 Pris 198,-

**Power Control Circuits Manual**  
by R.M. Merston

Electronic Power Control techniques are used to control (either manually or automatically) the brilliance of lamps, the speed of electric motors, the temperature of heating elements, the loudness of audio signals and so on. This control can be achieved using electro-mechanical means via switches and relays, or by electronic components such as transistors, SCR's, TRIAC's and power IC's. This book takes an in-depth look at the whole subject of electronic power control, and presents the reader with a vast range of useful circuits and diagrams. Subjects covered include basic principles, switch and relay circuits, CMOS switches and selectors, AC power control and DC power supply methods, and including audio power amplifiers and some used for in-car systems. The manual is primarily aimed at the practical design engineer, technician and experimenter as well as the electronics amateur enthusiast.

1990, 206 pages, 214 x 136mm, illustrated.

**Superconductivity**  
by Jonathan L. Mayo

With he by-line The threshold of a new technology and the statement "The most revolutionary development in electronics technology since the transistor and laser", the book is written in an easy-to-follow terminology which covers the full spectrum of superconductivity and superconductive applications. This book explains the properties of superconductivity, describing what it is, what it can and cannot do, as well as its advantages and drawbacks. The most recent advances are included through history is provided to help you fully understand and appreciate the science. It discusses the present and future impact of the applications of superconductivity in the areas of: power systems - electric lines, generators, and motors; electronics - high density, high speed integrated circuits; science and medicine - containing fusion reactions and medical imaging systems; and transportation - electromagnetic trains and electric cars. It explores the future of superconductivity, including advanced research and applications, international efforts and competition, and governmental influences. It also provides a comprehensive glossary of terms.

1988, 144 pages, 234 x 188mm, illustrated.

Best nr. 07 11 30

**Electric Motors and Drives**  
by Austin Hughes

Radical changes have taken place over the last twenty years in the design and construction of electric motors and the means of driving them. For a hundred years or more, different kinds of motor have had to be designed for as many different purposes, as there was no easy way of achieving motor control; speed regulation under load has had to be done within the motor itself.

Power electronics has changed all that with the thyristor (SCR) and the development of variable frequency inverters, with which single off-line phase brushless induction motors can be controlled for speed. These developments resulted in the demise of many specialist motor designs as the emphasis has shifted from compatibility within the actual motor to sophisticated control circuitry external to the motor. This book explores most of this currently widely-used modern types of motor and electronic driving methods, including conventional and brushless DC, mains and inverter fed induction motors, stepping motors, mains and converter fed synchronous motors, and reluctance motors. Applications are deliberately spread throughout the text in order to emphasise the fact that there is no longer any automatic correlation between motor type and application. You need to do anything with an electric motor you must read this superb book first.

1990, 320 pages, 203 x 135mm, illustrated.

Best nr. 07 11 33  
Prls 279,-

**Electric Motors**  
by Jim Cox

The book set out in simple terms the essential characteristics and operating limitations of the principle motor and generator types. The approach is essentially practical in nature with few calculations needing anything more than simple arithmetic, giving basic operation and installation information to the first time user.

The book shows you how to apply automotive, industrial and domestic motors in home-made motor and generator types such as servo and stepper motors are included. Readily available in the surplus market, the unusual types can be extremely useful in special applications. The book includes data about motor starting systems, electronic speed control and motor braking.

1990, 134 pages, 203 x 148mm, illustrated.

Best nr. 07 11 36  
Prls 119,-

**A Beginners Guide to Modern Electronic Components**  
by R.A. Penfold

The wide range of components available for use in modern electronics tends to baffle both newcomers and more seasoned users alike. This book tries to make life a little easier. The book describes the basic functions of components but is not an electronics text book. Instead it deals with the practical aspects such as colour codes, deciphering code numbers and the suitability of components for given applications.

Some of the components covered include Resistors (including Potentiometers), various types of capacitors, inductors, diodes (including Zener and Varicaps), Transistors both silicon and germanium, op-amp electronic devices, operational amplifiers, logic integrated circuits, loudspeakers and microphones and relays. The book cleverly divides the components into Passive, semiconductor integrated circuits and The Rest which includes connectors, switches and multiway components. A useful index has been included in conjunction with the contents pages, but does enable much of the detail about components to be tracked down.

1990, 166 pages, 178 x 110mm, illustrated.

Best nr. 07 11 39  
Prls 68,-

**Passive Components - A User's Guide**  
by P.R. Sinclair

'Passive' in this context is taken to include any component which is incapable of power amplification, either then the narrower definition of resistors and capacitors or from an incomplete understanding of electronics.

'Passives' include using resistors of insufficient heat dissipation rating, high-loss type capacitors being used in oscillator or tuned circuits, and similar time and money wasting problems. Actually the intensive use of semi's and IC's has increased the vital importance that passive components have to play in establishing stable feedback loops and bias chains on which the overall performance of the circuit depends. The book covers the main passive components, their fundamental action, parameters, temperature variation, tolerance, stability, reliability, manufacturing methods and standards. An up-to-date and very educational book that you must read.

1990, 246 pages, 215 x 137mm, illustrated.

Best nr. 07 11 42  
Prls 259,-

**Newnes Electronics Assembly Handbook**  
by Keith Brindley

This book is a fascinating insight into commercial electronics assembly techniques and methods, and will be a source of inspiration and a guide to the amateur projects builder. The book covers electronics assembly to a depth which, the publisher believe, has not been seen in print before. Contents include an introduction to electronics assembly, PCB and surface mount assembly, electromechanical assembly, packaging, soldering and quality testing, standardisation of manufacture and the worldwide standards, quality assurance, and an interesting chapter on the performance involved for a manufacturer seeking to secure the MoD as a customer.

1990, 350 pages, 250 x 195mm, illustrated.

**Understanding Data Communications**  
by George E. Friend, John L. Pike, H. Charles Baker, John C. Bellamy

Data communications - the transmission of words or symbols from a source to a destination - is no longer a vague or a business world. You can learn the basic principles in the easy-to-understand book, and a whole lot more. Ten chapters cover basic concepts and fundamentals of transmission and reception, asynchronous and synchronous, protocols, error control & networking. Subjects include two wire and coaxial cable communication; waveguides, modems, fibre optics and satellite communication to name a few.

1988, 296 pages, 220 x 180mm, illustrated.

Best nr. 07 11 57  
Prls 298,-

**Electronic Circuit Design Art and Practice**  
by T.H. Odeh

The theme of this textbook is the practical element of electronic design. There is more to circuit design than a good theoretical foundation augmented by a considerable amount of laboratory experience. Where do new circuit ideas come from? This question is followed in the first chapter, and the discussion is maintained throughout the following eight chapters dealing with high and low frequency, small-signal amplifiers, on-chip electronic circuits, digital circuits, oscillators, transistor circuits and power amplifiers. One or more experimental circuits are described in each chapter in detail for the reader to build, a total of thirteen project exercises in all. The last chapter draws some conclusions about the fundamental problems of design in the light of the materials that have been dealt with in the book.

1988, 182 pages, 228 x 151mm, illustrated.

Best nr. 07 11 60

**How To Design Solid State Circuits**  
by Martin Horowitz and Dakon T. Horn

This revised book provides exact data on every aspect of semiconductor design: performance characteristics, applications potential, operational reliability, and more. Four major categories of semiconductors are examined: diodes, transistors, integrated circuits, and thyristors. Discussion begins with devices made of individual semiconductors leading into a description of the semiconductor diode and its many functions in the modern circuit.

The DC bias and stabilisation conditions for bipolar and field-effect transistor (FET) semiconductors are presented and the use of semiconductors in audio and radio-frequency (RF) amplifiers using a varying input signal are discussed. Emphasis is placed on digital-circuit design along with its many variations. Designs using both integrated circuits and discrete components are described. Discussions of silicon-controlled rectifiers and other lesser-known thyristors are also presented. New material covers additional semiconductor including zener diodes, tunnel diodes, light sensitive diodes, unijunction transistors, phototransistors, and microwave semiconductors. Ranging from simple temperature-sensitive resistors to integrated circuit units composed of multiple microcircuits, this book describes a host of the latest in solid state devices.

1988, 380 pages, 224 x 188mm, illustrated.

**Digital Systems Design with Programmable Logic**  
by Martin Boton

Programmable logic devices (PLD's) bring indisputable benefits in terms of speed, flexibility and reliability to digital systems design, and so the modern engineer needs to be familiar with the design principles of programmable logic. This book provides a clear and careful introduction to modern, structured digital systems design from a programmable logic perspective. Extensively covering synchronous and asynchronous techniques, a top-down implementation-independent approach to design is taken throughout. Topics covered include extensive coverage of state machine design, an appendix listing all known PLD's, test objectives, summaries and problems with each chapter, and a very comprehensive bibliography. An excellent introduction to programming logic for the practising professional and dabbling amateur alike.

1990, 384 pages, 240 x 160mm, illustrated.

**INTEGRATED CIRCUIT HANDBOOKS**  
**How to Identify Unmarked IC's**  
by K.H. Recor

The chart shows how to plot the signature of an unmarked IC. This should enable the IC to be identified with reference to manufacturers' or other data to be used in a specific application, without actually assigning a type number.  
1992. Fold-out sheet 640 x 450mm. Coversize 176 x 120mm.

Best. nr. 07 12 50  
Pris 29.-

**Operational Amplifiers**  
by G.B. Clayton, BSc, FInstP.

Provides an insight into the capabilities of modern operational amplifiers, and also discusses in detail the practical applications in 1979. 416 pages. 222 x 145mm, illustrated, hardback.

Best. nr. 07 12 53  
Pris 389.-

**How to Use Op-Amps**  
by E.A. Parr

This designer's guide covering many operational amps serves as a source book of circuits and a reference book for design calculations. The book covers basic circuits, oscillators, audio circuits, filters, power supplies, and a large selection of miscellaneous circuits. There is also a short section of constructional notes and fault finding details.  
1982. 160 pages. 176 x 110mm, illustrated.

Best. nr. 07 12 56  
Pris 59.-

**The Bifet Design Manual**  
*Texas Instruments*

A design reference manual for a wide range of analogue circuit and system designs using the T1 series of Bipolar JFET op-amps. The book includes full circuit diagrams, design equations and operation details on a wide range of applications, including amplification, sampling, filter and oscillator circuits.  
1985. 96 pages. 210 x 148mm, illustrated.

Best. nr. 07 12 59  
Pris 79.-

**Op-Amp Circuits Manual**  
by R.M. Marston

One of the most popular and versatile 'building blocks' of our time is the operational amplifier or 'op-amp'. The 'standard' types generally the most familiar, but you will also find described in this book the less well-known 'non-inverting' and 'OTA' types. In addition a total of over 300 practical circuits, with diagrams and tables, are provided for the practical design engineer, technician and experimenter alike.  
1989. 211 pages. 215 x 138mm, illustrated.

Best. nr. 07 12 62  
Pris 229.-

**Linear and Interface Circuit Applications Volume 1**  
by D.E. Pippenger and E.J. Tobben

The first in a series of books showing applications using Texas Instruments' linear integrated circuits. This book covers op-amps and comparators, video amplifiers, voltage regulators, switching power supplies, power protection and timers. The book shows complete designs and how to design your own circuits in great detail.  
1986. 312 pages. 210 x 148mm, illustrated.

Best. nr. 07 12 65  
Pris 148.-

**Linear and Interface Circuit Applications Volume 2**  
by D.E. Pippenger and E.J. Tobben

In part two, display drivers for LEDs, DC and AC plasma vacuum fluorescent and thin film electroluminescent display drivers from Texas Instruments are covered. The remaining half of the book shows circuits and design parameters for data transmission line circuits including RS232C, RS422A, RS423A, RS422A and RS485. IEEE488, IBM380370 series and general purpose line circuits are also discussed.  
1986. 216 pages. 210 x 148mm, illustrated.

Best. nr. 07 12 68  
Pris 148.-

**A Practical Introduction to Digital IC's**  
by D.W. Easlering

Besides a number of simple and complex projects, the book contains full construction details of a test set that will enable the reader to identify and test TTL IC's.  
1977. 76 pages. 180 x 108mm, illustrated.

Best. nr. 07 12 71  
Pris 49.-

**CONSTRUCTOR GUIDES**  
**How to Design and Make Your Own PCB's**  
by R.A. Penfold

This book should enable you to familiarise yourself with both the simple and more sophisticated methods of producing PCB's. The emphasis is very much on the practical aspects of design and construction, and is highly recommended to all newcomers to electronics.  
1983. 66 pages. 177 x 110mm, illustrated.

Best. nr. 07 12 74  
Pris 49.-

**Practical Electronics Handbook**  
by Ian Sinclair

An excellent handbook for the constructor ranging from resistor colour codes to simple transistor circuit building blocks. An invaluable reference book for everyone from beginners to professional engineers. Covers passive and active discrete components, circuits, linear and digital IC's and TTL and CMOS pinouts.  
1988. 224 pages. 216 x 138mm, illustrated.

Best. nr. 07 12 77  
Pris 229.-

**Introducing Amateur Electronics**  
by Ian R. Sinclair

Designed as an introductory text for anyone wanting to build electronic projects, the book assumes no previous knowledge and teaches the skills of constructing electronic circuits. Details of a number of actual practical experiments are given showing how components work and behave.  
1981. 96 pages. 216 x 138mm, illustrated.

Best. nr. 07 12 80  
Pris 98.-

**Beginner's Guide to Building Electronic Projects**  
by R.A. Penfold

This book will help the complete beginner to tackle the projects in the popular magazines with confidence. Covers component identification, tools, soldering, cases, legends, etc.  
1977. 108 pages. 180 x 108mm, illustrated.

Best. nr. 07 12 83  
Pris 39.-

How to Get Your Electronic Projects Working

**30 Solderless Breadboard Projects Book 2**  
by R.A. Penfold

As in Book 1 all the projects are built on Veroboc. However, in this book CMOS logic circuits are used where linear ICs were used in Book 1. Absolute beginners must start with Book 1, but this is an ideal follow-on text. 1983. 60 pages. 178 x 110mm, illustrated.

Best. nr. 07 13 34  
Pris 48.-

**Electronic Modules and Systems for Beginners**  
by Owen Bishop

Forget having to 'reinvent the wheel' as if electronic systems using already established and developed circuit designs. Many oscillators, bistables, amplifiers stages use time honored techniques that are known to work. This book describes over 60 electronic circuit modules: how they work, how to build them and how to use them. In the process of working with these building blocks you will learn the basic fundamentals of many established designs. Many modern electronic engineers are systems, not circuit, designers. Become such a systems designer and combine the modules together to make hundreds of different electronic systems: both analogue and digital. To show you how over 25 actual electronic systems are described in detail, covering such diverse applications as timing, home security, measurement, audio, including a simple radio receiver, games and remote control. Although a book aimed at beginners, introducing the principles and practice of electronics, there are plenty of circuit ideas for the more experienced constructor too. 1989. 200 pages. 178 x 110mm, illustrated.

Best. nr. 07 13 43  
Pris 79.-

**Popular Electronic Circuits Book 2**  
by R.A. Penfold

A further 73 projects build covering a wide range of subjects. Chapter headings are: audio circuits, test gear circuits, radio circuits, house and car circuits and miscellaneous circuits. The book is suitable for those capable of building projects from just a circuit diagram, although a description of how to work and any testing or setting up information is given. 1982. 146 pages. 180 x 108mm, illustrated.

Best. nr. 07 13 52  
Pris 59.-

**50 Projects Using Relays, SCRs and Triacs**  
by F.G. Rayer

This book is the companion volume to Power Supply Projects and should be of interest to any one who has a reasonable knowledge of power supply basics and would like to learn about more advanced designs. The practical and theoretical aspects of the circuits are covered in some detail, and the reader is not assumed to have an in-depth knowledge of electronic circuit design. However it is recommended that anyone who is not familiar with the fundamentals of power supply design and operation should obtain the introductory book first. Topics covered include switched mode power supplies, precision regulators, dual tracking regulators and computer controlled supplies. 1988. 92 pages. 178 x 111mm, illustrated.

Best. nr. 07 13 61  
Pris 59.-

**PROJECTS BOOKS**  
**The Maplin Electronic Circuits Handbook**

by Michael Tooley  
Welcome to the world of electronic circuit design! Whether you are an engineer, technician, student or enthusiast working at home, this book is for you. It aims to explode two popular myths - that only those with many years of experience should undertake circuit design, and that it requires advanced mathematics. Unless you are very unlikely neither of these is true. The book contains a unique collection of practical working circuits together with supporting information so that circuits can be reproduced in the shortest possible time and without recourse to theory. The circuits have been thoroughly tested and, wherever possible, a range of commonly available, low-cost components is used. The circuit can be readily modified and extended by the reader to meet his or her own application. Related circuits are grouped together and cross-referenced within the text and indexed, identifying which common types can be inter-connected and produce more complex systems. As far as is possible a common range of supply voltages, signal levels and impedances have been adopted. The book assumes that the reader has an elementary understanding of electrical principles and is familiar with common units and quantities. A selection of Maplin projects is included. 1990. 288 pages. 246 x 188mm, illustrated.

Best. nr. 07 13 37

**From the 'Drawing Board' to Finished Project**  
by the editors of Radio-Electronics magazine

The projects assembled here have all been drawn from the popular "New Ideas", "Drawing Board", "Designer's Notebook", and "Soleo/Sold State" articles as featured in Radio-Electronics magazine. Here you will discover dozens of unique and helpful ideas from electronics professionals and hobbyists alike. You will also find many fun and practical experiments and projects that you can build or modify to suit your own needs. Not just a compilation of articles or a collection of projects, this is an invaluable reference of expert electronic information that can benefit anyone with an interest in electronics, whether it be casual or professional. Some of the useful and informative articles presented in this volume include: automobile (car) locator, broadcast-band RF amplifier, audio over-mod multiplier, proximity power switch, car theft protection, schmitt trigger designs, burglar communications, precision rectifiers, single-chip synchro sweep circuits, frequency-boundary detectors, and more. American book. 1989. 160 pages. 235 x 185mm, illustrated.

Best. nr. 07 13 55  
Pris 179.-

**Electronic Games**  
by R.A. Penfold

Circuits for 19 different games including noughts and crosses, combination lock game, electronic roulette, one-armed bandit, snag indicator, electronic dice etc. All the projects are inexpensive and easy to construct. 1980. 96 pages. 180 x 108mm, illustrated.

Best. nr. 07 13 64  
Pris 48.-

**Cost-Effective Electronic Construction**  
by John Watson

Originally written under the title 'Cost-Effective Projects around the Home', this revised edition contains 10 detailed projects with full circuit descriptions; automatic porch light, TV switch off, dim speed controller, counter and display, sizer explorer, xenon strobe, ray gun, freazer/boiler alarm, xenon (D.O. port), radio control system. In addition there are many simple but useful building block type circuits. One major project is for a complete multi-channel radio control system, using linear and CMOS IC's wherever possible for compactness. 1985. 142 pages. 215 x 137mm, illustrated.

Best. nr. 07 13 76  
Pris 178.-

**Real-Life Scenic Techniques for Model Railroaders**  
by Carl Castel

If you are a model railway enthusiast who will not settle for the ordinary, run-of-the-mill layout, then this complete, step-by-step guide is for you. It opens the door to hundreds of tips, hints, and techniques for creating elaborate, multi-level scenic layouts that are accurate to every last detail. The book, backed by numerous photos and drawings, describes in detail how to create scenic backdrops, mountains, tunnels, terrain, trees, foliage, fences, and water that will make your layout approach state-of-the-art realism. Whether you want your trackwork to look rustic and weathered, modern and industrial, or all natural, you will find all the instructions you need in this invaluable guide. The book includes information on the tools and materials used in scenic construction, scratch building and super detailing: table (fabricator), types of trackwork, kite shading, building wooden, stone and steel bridges; couplers; making trees (packaged or from scratch). The modeller will learn how to work with plastic sheeting, wood, car board, plaster of paris, car body filler and many other materials that are readily available. American Book. 1987. 176 pages. 233 x 188mm, illustrated.

Best. nr. 07 13 85  
Pris 198.-

**Electronic Projects For Beginners**  
by F.G. Rayer

Includes a number of projects which can be built without any need for soldering. The book is divided into four sections: 'No Soldering' projects, miscellaneous devices, radio and a radio frequency projects and power supplies. Also included are some component & wiring layouts to aid beginners. 1978. 112 pages. 180 x 108mm, illustrated.

Best. nr. 07 13 40  
Pris 48.-

**Popular Electronic Circuits Book 1**  
by R.A. Penfold

Contains 73 projects to build with cut and short text (giving a brief introduction, circuit description and any special notes on construction and setting up). Chapter headings are: audio circuits; project circuits; and miscellaneous circuits. Not suitable for the absolute beginner. 1980. 150 pages. 180 x 108mm, illustrated.

Best. nr. 07 13 49  
Pris 59.-

**Mini-Matrix Board Projects**  
by R.A. Penfold

A selection of twenty useful and interesting circuits any of which can be built on a small Veroboard type 14354 (FL065). Projects include a MW radio, guitar headphone amp, transistor checker, booster, kitchen timer, baby alarm, touch switch, automatic signal, magnetic lock and more. 1982. 112 pages. 178 x 110mm, illustrated.

Best. nr. 07 13 59  
Pris 48.-

**Power Supply Projects**  
by R.A. Penfold

Gives details of stabilised, unregulated, fixed and variable power supplies and explains how to design your own power supplies. There are also circuits for train controller, r-r-pad charger, electronic fuse, shaver inverter and others. 1980. 96 pages. 180 x 108mm, illustrated.

Best. nr. 07 13 70  
Pris 49.-

**Model Railway Projects**  
by R.A. Penfold

Contains complete circuit and construction details of a number of different model train controllers and accessories. The accessories include a point controller, automatic signal, signal controller and various sound effects. 1981. 112 pages. 175 x 110mm, illustrated.

Best. nr. 07 13 79  
Pris 59.-

Projects for the Car and Garage

This is the 865 revised edition of this popular book, containing more than 30 projects for the car owner. Fully documented with constructional details, circuit diagrams, circuit board layout and installation recommendations. The projects are divided into the main areas of ignition, anti-theft and security, lighting, accessories and test gear for the garage workshop. The main project comprises a capacitive discharge ignition system suitable for a writer starting. Various useful extras are included such as an ignition timing light and a dwell meter. Other useful add-on projects included are lights-on reminders, lamp failure indicators, rev-counter, wiper delay, digital car clock, emergency beacon, car radio add-ons and many more. Note that we can no longer supply the job's mentioned in this book. 1985. 115 pages. 215 x 137mm, illustrated.

Best. nr. 07 13 88 Pris 179,-

RADIO CONTROL BOOKS

The Off-Road Buggy Book by Alan Harman

Written by the editor of Model Car, this book gives a comprehensive guide to all aspects of the sport. It sets out the various forms and scales of buggies, describes building, preparation and racing; discusses electric buggies; control systems; gives a range of driving hints and tips on reliability. The book also has useful appendices giving the specification of the various racing classes and the organisation behind the sport. The very wide range of buggies upon which buggies can be run and their continuing price decline is making this a last growing sport. For the enthusiast who wants to do something more than go last in a straight line through an empty carpark, then this is the book to own! 1990. 125 pages. 210 x 145mm, illustrated.

Best. nr. 07 13 91 Pris 119,-

Radio Controlled Off-Road Cars

by Deryck Green and Chris Green

Building and racing radio controlled cars is fun, especially 1/8th scale electric covered buggies. Because of their safety, quietness and versatility they are by far the most popular form of R/C car. Although the book is very much aimed at owners of 1/8th scale cars, it should also be of general interest to owners of other types of electric powered R/C cars and models, especially 1/16th 'Monster' class cars. The book gives a detailed insight into the terminology of the sport, and describes the difference between

'spits and solids', 'reds' and 'yellows', and how to choose, build and modify 'buggy' kits and set up radio equipment. 1990. 112 pages. 231 x 171mm, illustrated.

Best. nr. 07 13 94 Pris 119,-

Getting Started in Model Car Building

by Dennis Doty

Whilst this book has nothing to do with electronics directly, it would however, be very useful for anyone interested in building radio control models for example. While concentrating on scale model cars, the chapters constitute a complete guide to the materials and tools you will need, descriptions of various painting methods, and details on realistic finishing applications for both plastic and metal components, and includes hints and tips from an author having many years experience behind him, enabling you to produce authentically detailed models. American book. 1989. 128 pages. 233 x 188mm, illustrated.

Best. nr. 07 13 97 Pris 159,-

Introducing Radio Control Model Boats

by Vic Smeed

The author has spent many years answering readers' questions for the magazines Model Maker and Model Boat. It was therefore fitting that he should draw upon that experience to introduce radio control model boats to a wider audience. The book covers all aspects - including radio control equipment, boats and competition classes, construction, power options, equipment installation, pre-launch checks and operation. A useful discussion of maintenance and fault finding concludes the book, which should reassure the modeller does not have to wade out too far to deal with equipment failure. The existence of 33 classes of models for competition means that the scope for getting involved in this long established but popular sport is vast. Certainly the experience passed on in this book should mean the transition from the modelling bench and bath-tubs, to an enjoyable afternoon racing, is a quick one.

1989. 95 pages. 210 x 145mm, illustrated. Best. nr. 07 14 00 Pris 98,-

Electronic Projects for Model Boats

by Ken Gim

Although radio control equipment is available and readily available nowadays, there are still many items which are not available commercially or more cheaply at home. This book describes how to make some of these items, which include servo choppers, a battery tester, glow plug supply and a multimeter, with no prior knowledge of electronics required. The book begins with an overview of the necessary tools, board construction techniques and basic R/C layout, moving on to discuss specific projects, each featuring a circuit description with full construction and testing procedures. The book is aimed at the boat modeller who likes to get involved in more than just the building of the model and who will, with the help of its contents, be able to lift the electronic equipment to a higher standard also. Appendices cover such aspects as resistor colour codes, component recognition, how to mount power semiconductor devices to heat sinks and component suppliers. 1990. 144 pages. 210 x 145mm, illustrated.

Best. nr. 07 14 03 Pris 129,-

Introducing Radio Control Model Aircraft

Bill Burkinshaw

Flying radio controlled models is a pastime open to anyone, even without specialist knowledge. It began around the 1950's and now attracts a growing band of regular followers. The technology has advanced spectacularly since those early days but has now settled down: the former editor of RCM&E magazine knows the areas which may bemuse or baffle the newcomer. He therefore takes us step by step through the theory of flight, how aircraft will be controlled, into radio equipment, through engines, construction finishing and installation, and finally into the flying of powered aircraft. He also describes flying helicopters and flying gliders to complete the book. Model aircraft flying can be a rewarding hobby producing superb working scale models. This book or buy it ready the reader either to construct from scratch into what is still generally a little-understood area of model flight. The author has virtually made it his life's work to understand and overcome the many practical problems that come from making a model helicopter fly, but, as with real aeroplanes, these problems are just as valid with real helicopters, and similarly are solved as they would be for the full sized machine. 1980. 149 pages. 210 x 144mm, illustrated.

Best. nr. 07 14 06 Pris 119,-

Aero Modellers' Handbook

by Les Nethercott

Getting a model aircraft to fly successfully is not difficult, but in addition to possessing the right tools and a certain amount of manual skill, it does require a basic knowledge of what keeps an aeroplane in the air, and how its controls work. These basic principles are the starting point at the beginning of the book, which also explains all the essential principles so that the construction of the first model proceeds on sound footing. Different methods of assembly are discussed, using different materials for fuselages, wings and tailplanes, plus undercarriage construction, making propellers from scratch, and covering and painting the model. Other types of aircraft are also considered, including gliders, rubber-powered models, diesel, glow plug and electric motors, radio control and control line systems. Finally, having built your chosen model, you are given extensive advice on flying it, correcting the balance, adjusting wings, and dealing with other common problems. Fully illustrated with drawings, diagrams and photographs, the book is both a first-class primer for the beginner and a sound reference source for the more experienced modeller. 1990. 218 pages. 241 x 163mm hard cover, illustrated.

Best. nr. 07 14 09 Pris 248,-

Radio Control Helicopter Models

by John Drake

Intended for aeromodellers who wish to have a go at designing their own helicopter, this book seems at first glance highly technical and mathematical, but on reading, you will find it straightforward and simple to follow. The basic examples analogies make for a clear explanation of the principles and complexities of the different aspects of helicopter dynamics and engineering. These are complete drawings for the construction of a 50-powered model - but which will require the use of a lathe and similar machining work. There are valuable chapters on pre-flight checks and how to actually fly completed models. For the aspiring modeller, this book will provide a fascinating insight into what is still generally a little-understood area of model flight. The author has virtually made it his life's work to understand and overcome the many practical problems that come from making a model helicopter fly, but, as with real aeroplanes, these problems are just as valid with real helicopters, and similarly are solved as they would be for the full sized machine. 1980. 149 pages. 210 x 144mm, illustrated.

Best. nr. 07 14 12 Pris 98,-

BOOKS ABOUT HOME SECURITY

Electronic Alarm Circuits Manual

by R.M. Marston

This book is packed with useful circuits. 1988. 132 pages. 216 x 138mm, illustrated.

ALARMS

55 Electronic Projects and Circuits by Charles D. Rakes

This book will show how to secure your home and property without spending a fortune, and no previous experience is necessary. Step-by-step instructions and work-in-progress diagrams are provided, with trouble-shooting advice, for building each project, including installation in your home or car. The projects include car alarms, with indicators for low/high battery voltage, lighting failure, low brake fluid level, water overheating, and break-in intrusion alarms having sensors for light, proximity, sound, glass breakage, vibration and fence intrusion; burglar alarm control systems with simple multi-input control, and time entry control; alarm indicators and sounders; telephone remote listening and alarm control, from a basic remote unit to adding extra functions; fire and smoke alarms and some miscellaneous alarm circuits; moisture and flood alarms; AC motor over load, radiation level, and severe weather warning. You are certain to find many projects in this book that you will find very useful. 1988. 178 pages. 234 x 185mm, illustrated.

Best. nr. 07 14 18 Pris 229,-

Electronic Security Devices

by R.A. Pentol

The book covers which activated burglar alarms with exit and entry delays, infra-red, ultrasonic and Doppler shift systems as well as smoke and gas detectors, water temperature and baby alarms. All the circuits are fairly simple and Veroboard layouts are given. 1979. 102 pages. 180 x 108mm, illustrated.

Best. nr. 07 14 21 Pris 48,-

More Advanced Electronic Security Projects

by R. A. Pentol

This book deals with many aspects of home security, covering intruder, fire and flood protection, with the emphasis on how to make the best use of electronic devices that you can build yourself. There are 25 constructional projects, ranging in complexity from a single door protection circuit that can be built in an hour or two, to a sophisticated, multi-channel security system, that most intruders will find very difficult to beat. Much use is made of the latest in technology to combine simplicity of construction with reliability of operation. Each project is described in detail, with circuit diagrams, full explanations of how it works, complete instructions for building and testing, and, often, suggestions for adapting it to specialised requirements. The projects can be readily undertaken by the beginner. Even the multi-channel system starts at a simple level and is expandable later as the constructor's experience grows. Since all the projects are powered by battery or from an inexpensive, rechargeable mains adapter, they are entirely safe. 1981. 141 pages. 216 x 135mm, illustrated.

Best. nr. 07 14 24 Pris 59,-

Electronic Projects for Home Security

by Owen Bishop

This book deals with many aspects of home security, covering intruder, fire and flood protection, with the emphasis on how to make the best use of electronic devices that you can build yourself. There are 25 constructional projects, ranging in complexity from a single door protection circuit that can be built in an hour or two, to a sophisticated, multi-channel security system, that most intruders will find very difficult to beat. Much use is made of the latest in technology to combine simplicity of construction with reliability of operation. Each project is described in detail, with circuit diagrams, full explanations of how it works, complete instructions for building and testing, and, often, suggestions for adapting it to specialised requirements. The projects can be readily undertaken by the beginner. Even the multi-channel system starts at a simple level and is expandable later as the constructor's experience grows. **TEST GEAR PROJECTS**  
Electronic Test  
Equipment Projects

by Alan C. Alsola

Several interesting projects are covered and full construction details are given. Projects include millivoltmeter, audio oscillator, frequency meter, HF signal generator, function generator etc.

Best. nr. 07 14 36  
Pris 169,-

**Test Equipment Construction**

by R. A. Perrid

This book describes in detail how to construct some simple and inexpensive, but extremely useful, piece of test equipment. Stripboard layouts are provided for all designs, together with wiring diagrams where appropriate, plus notes on their construction and use. The following designs are included: AF generator, test Bench Amplifier, Audio Millivoltmeter, High Resistance Voltmeter, Transistor Tester, Capacitance Meter, AF Frequency Meter, Analogue Probe, CMOS Probe, TTL Probe. Apart from providing the home constructor with a useful range of test gear, building these projects should also be an interesting and rewarding exercise in its own right. The designs are suitable for both newcomers and more experienced hobbyists alike.

Best. nr. 07 14 39  
Pris 59,-

**Build Your Own Test Equipment**

by Homer L. Davidson

Learn how to build and use instruments for troubleshooting TVs, stereos, computers, CD players, 'ham' radios, microwave ovens, camcorders, electric motors, power supplies, cables and more. The book tells you all you need to know about constructing inexpensive, high-capacity, trouble-shooting equipment for almost any purpose, leading you step-by-step through the entire process of finding and buying components, designing PCBs, substituting components, building and testing projects and finally putting your completed instruments to work.

Best. nr. 07 14 42  
Pris 248,-

**Practical Electronic Sensors**

by Owen Bishop

This book describes various types of sensors and the ways in which they are used to monitor almost every aspect of the environment, how such networks and how its signals are processed electronically to produce a meaningful result.

A dozen constructional projects, with functions which apply to the domestic environment in and around the home, are provided by way of practical examples of the uses of sensors. The projects include circuit diagrams with component values, explanations of operation and full building instructions. Some of them are suitable for the beginner, while others will be of interest to the more advanced constructor. The projects, which are indicated with levels of complexity in construction, include: sunrise duration meter, temperature alarm, passive infra-red intruder, car bicycle alarm, wind direction indicator, inductive proximity detector, soundie velometer, sound controlled switch, tachometer, gas alarm, water level controller, and model speed controller.

Best. nr. 07 14 30  
Pris 98,-

**Security Systems and Intruder Alarms**

by Vivian Capel

An alarm system and total security coverage is becoming essential in every factory, business and shop. How should you choose a plan and install such a system? This book is divided into two sections: a general alarm systems work, what they do, how they can be planned, and how proposed systems can be checked. It also describes countermeasures against other hazards such as shoplifting, employee theft, fire, fraud, liability claims etc., examining control equipment, various types of sensors, going up to close-circuit TV monitoring and domestic systems. The technical section is more specific dealing with installing and maintaining intruder and fire alarms, fault-finding and maintenance and the British Standards. Primarily written for managers and business people and installation engineers but will be of interest as a general reference to anyone planning to install a security system.

Best. nr. 07 14 33  
Pris 498,-

**More Advanced Test Equipment Construction**

by R. A. Penfold

Describing some slightly more advanced test equipment projects for readers who have some amount of experience at project building. Full circuit diagrams plus notes on construction are provided. Detailed notes on any necessary setting up are also provided, together with information on using the projects to best effect. Projects included are: digital voltmeter, digital capacitance meter, digital transistor tester, digital heatsink thermometer, bench power supply, dynamic transistor tester, A.F. digital frequency meter, digital resistance meter, digital current tracer, crystal calibrator and pulse generator. When finished the projects provide a very useful range of test gear for future project development and servicing, and the building of them should prove an interesting and rewarding pastime in its own right. The projects are not strictly suitable for complete beginners, but anyone possessing a modicum of hands-on construction experience should have little difficulty.

Best. nr. 07 14 45  
Pris 69,-

**INTEGRATED CIRCUIT PROJECT BOOKS**

Modern Op-Amp Projects

by R.A. Penfold

Contains a wide range of projects making use of all the latest types of op-amps including transconductance types. All of the projects are fairly easy to construct and a variety of layouts provided for most of them.

1982, 112 pages, 178 x 110mm, illustrated.

Best. nr. 07 14 48  
Pris 46,-

**IC 555 Projects**

by E.A. Parr, BSc, C.Eng., MIEEE

Describes dozens of circuits using the NE555 timer, including car wiper delay, rev counter, emergency flashers, model railway shuttle service, stations top alarm, computer voice signal generator, police siren, Star Trek siren etc etc.

1981, 176 pages, 180 x 108mm, illustrated.

Best. nr. 07 14 51  
Pris 59,-

**50 Circuits Using 7400 Series IC's**

by R.N. Scur

Fifty simple but useful circuits using eleven of the more common 74 series IC's. Circuits include logic level indicator, low frequency audio oscillator, tone tester, two bit decoder, twin-tone oscillator, simple signal inverter and many more. The circuits can also be built using 74LS series IC's.

1979, 76 pages, 180 x 108mm, illustrated.

Best. nr. 07 14 80  
Pris 59,-

**OPTO ELECTRONIC BOOKS**

50 Simple LED Circuits

by R.N. Scur

Circuits using LED's and Displays, 50 different ones are described. 1977, 64 pages, 180 x 108mm, illustrated.

Best. nr. 07 14 54  
Pris 229,-

**Timer/Generator Circuits Manual**

by R.M. Marston

This book is mainly concerned with waveform generator techniques and generator circuits. Waveform generators are used wherever or other in most types of electronic equipment, and thus form one of the most widely used classes of circuit. They may be designed to produce outputs with sine, square, triangular, ramp, pulse, staircase or a variety of other forms. The generators may produce modulated or unmodulated outputs, and the outputs may be of single or multiple form.

The book is divided into 11 chapters presenting over 300 practical circuits, diagrams and tables. These comprise basic principles, sine wave generators, pulse generators, timer IC generator circuits, triangular and sawtooth generators, multiple waveform generation, wavetron synthesiser ICs, waveform generator ICs, phase-locked loop circuits, and miscellaneous '555' circuits.

1980, 278 pages, 215 x 138mm, illustrated.

Best. nr. 07 14 57  
Pris 229,-

**The Fibre Optics and Laser Handbook**

by Edward L. Sanford, Jr.

Video disk players that use laser beams to read information stored on the disk, laser devices that read bar graphs and on board packages, fibre optic sensing devices that can relay information on malfunctioning car parts to a warning indicator on your dashboard. These are just a few of the many ways that lasers and fibre optics are making an impact in today's world. Whether you are simply curious about the subject, an engineer looking for a thorough overview of the laser's practical applications or an electronics experimenter who wants some ideas on making your own laser and fibre optic devices, then this is probably the most complete book available on the state of the art! A American book.

1988, 240 pages, 235 x 185mm, illustrated.

Best. nr. 07 14 72  
Pris 298,-

**The Laser Cookbook**

by Gordon McComb

Inexpensive projects that span a wide range of practical uses. From phone lines and videodisks to surgical procedures and optical computing - the laser is one of the most important inventions to come along during this half of the 20th century. This book gives you the opportunity to investigate, first hand, a relatively new and exciting science. With this book you can create and experiment with simple advanced level lasers that have a real, practical applications! The 88 laser based projects presented here are geared toward the workshop experimenter on a limited budget. Spanning a wide range of disciplines, the projects vary from experimenting with laser optics and constructing a laser optical bench using lasers for light shows, gunnery practice, even beginning and advanced holography. High quality laser art illustrations and detailed project parts lists put all the information you need to get started right at your fingertips! Many of the topics covered are ideal for science projects as well as teaching tools for anyone interested in learning how lasers work and what they can do. Gordon McComb is an avid laser hobbyist and electronics experimenter. He has written over 1,000 magazine articles and a dozen books. Please note that this is an American book and references to metric voltages obviously do not apply in the UK.

1988, 404 pages, 234 x 189mm, illustrated.

**Opto-Electronic Line Transmission**

by R. L. Tricker

The use of fibre optics has become increasingly popular in both commercial and military environments, and although optoelectronics is comparatively simple technology, it is nevertheless essential for working engineers and technicians to be aware of the basic fundamentals and capabilities of this modern technique. A chapter on test methods is also included. The book is written in a readable but non-mathematical style and is a very readable introduction to fibre optic transmission, appealing to practising electronics and telecommunications engineers, technicians and students.

Best. nr. 07 14 84  
Prls 269.-

**Optical Communications**

by M. J. N. Sibby

The book serves as an introduction to the subject, and is presented with the assumption that the reader is familiar with Maxwell's equations and certain elements of communications theory. Notwithstanding, it is still a fascinating source of information about both circuit and device design techniques and data interchange. A detailed account of the various components and subsystems that make up an optical link, including light sources, optical fibres, detectors and preamplifiers, is given. A typical optical transmission system is then analysed in detail and practical links are described. Current developments, including advanced components and systems, are also considered. Throughout the mathematical level is kept at an appropriate level concurrent with the latter stages of undergraduate electronics, communications and physics courses. The book will appeal to postgraduate students needing an introduction to the field, and to practising engineers and scientists needing optical communications for the first time.

Best. nr. 07 14 87  
Prls 248.-

**Projects in Opto Electronics**

by R. A. Penfold

Contains dozens of useful and interesting projects using LEDs, LDR's, etc. Circuits include automatic laser audio compressor, lamp dimmer, slow-act. modulated light transceivers, etc.

Best. nr. 07 14 90  
Prls 48.-

**Optoelectronics Circuits Manual**

by R. M. Marston

Optoelectronics is the study of any devices that produce an electrically-induced (visible or invisible light) output, or an optically-induced electrical output, and electrical circuitry used for controlling such devices. This manual is a useful guide to the optoelectronics device user, and is especially aimed at the practical design engineer, technician and experimenter, as well as the electronics student and amateur. It deals with the subject in an easy to read, down to earth, and non-mathematical yet comprehensive manner, explaining the basic principles and characteristics of the best known devices, and presenting the reader with many practical applications and over 200 circuits.

Best. nr. 07 14 93  
Prls 229.-

**Modern Opto Device Projects**

by R. A. Penfold

In recent years the range and variety of opto devices that have become available to the home constructor have expanded and changed radically. These devices are now representative of one of the more interesting areas of modern electronics in which the hobbyist can experiment, and many of these devices have useful practical applications too; they are not all just for show. This book contains a number of practical designs which utilise a range of modern opto-electric devices, including ultra-bright LEDs, S. R. detectors and fibre-optic cable. The projects are not all simple in construction but they should be within the capabilities of those with some reasonable experience of project building, and some of the more simple designs are suitable for beginners.

Best. nr. 07 14 96  
Prls 59.-

**BOOKS OF HI-FI PROJECTS**

by F. G. Rayer

The book covers the construction of a wide range of audio projects including preamps, mixers, power amps, tone controls, matching and a range of miscellaneous projects including audio wave source, dummy load, audio limiter, light modulator, VOX unit, etc.

Best. nr. 07 14 99  
Prls 48.-

**Digital Audio Projects**

by R. A. Penfold

The first section of this book takes a look at the basic principles involved in converting an audio signal into digital form and then converting it back to an audio signal again. It also deals with some practical aspects that have to be borne in mind when considering digital audio projects. The second section contains some useful and extremely interesting, practical circuits for constructors to build and experiment with. By current standards the projects are not highly complex, but are probably beyond the scope of beginners and are more suited for someone with a moderate amount of experience in electronic project building.

Best. nr. 07 15 02  
Prls 59.-

**Audio Circuits and Projects**

by Graham Bishop

No matter how sophisticated your audio system, there are circuits here that will improve it - in no insignificant way, in terms of convenience. There are projects that cater for the musician too. A whole series of tested projects, easy and inexpensive to build, are shown together with full constructional details. The first part of the book includes projects for audio amplifiers, preamplifiers and signal correction/transistor circuits to a 100W power amp design. The second part covers musical instruments such as synthesizers, rhythm generators and organs, including effects devices such as sound to light modulation and other 'fun circuits'. All the projects can be built onto veroboard, and components listed and relevant semiconductor information is included. Even if you now wish to build all or any of the designs they are, the book certainly contains many thought-provoking ideas.

Best. nr. 07 15 05  
Prls 199.-

**Audio Amplifier Construction**

by R. A. Penfold

Circuits of a wide range of preamplifier and power amplifier designs, from low noise microphone & tape head preamps to 100W MOSFET amps, are provided in this book. The projects are relatively easy to construct using the PCB or stripboard designs given. Setting up and testing procedures are described, although in most cases no test gear is required.

**Enhanced Sound**

by Richard Kaufman

Now you can get better audio equipment without having to spend too much money. This book is designed to help you boost the capabilities of different types of audio systems. Examples of particular interest are computer programs for designing speaker enclosures, practical indoor FM antennas, a guide to active crossover networks, how to use a filter to provide bass boost, rhombic antennas, acoustic treatment of the listening room, and stereo image enhancement projects. Each project is sufficiently sophisticated to be useful to the professional engineer as well, yet is explained simply enough even for the most novice of builders. Projects include a surround sound decoder, a passive image enhancer, an auxiliary input switch, tone controls, amplifier bypassing circuit, a shuffler, modern hi-fi stereo, helical antennas, and much more! American book.

Best. nr. 07 15 11  
Prls 179.-

**BOOKS ABOUT LOUSPEAKERS**

An Introduction to Loudspeakers and Enclosure Design

by V. J. Cepel

There is more to building a loudspeaker enclosure than just fitting a couple of speaker units into a box. There are many types of enclosure and drive units, each having their own features, good points and stages. The book explores these, and in particular examines the ways and wherefore so that the reader can understand the principles involved and so make an informed choice of design, given design loudspeaker enclosures for him or herself.

Crossover units are also explained, the various types, how they work, the distortions they produce and how to avoid them. Finally, there is a step-by-step description of the construction of the Kapellmeister loudspeaker enclosure, a design that involves novel features which overcome many of the disadvantages of more conventional types. It is a transmission speaker that has remarkable stereo imaging, an uncoupled musical sound, occupies minimal floor space and is inexpensive to build.

Best. nr. 07 15 14  
Prls 59.-

**Loudspeaker Enclosure Design and Construction**

This booklet contains a broad selection of cabinet designs and enclosures for the chassis loudspeaker units in Chaplin's BIG CAT range of loudspeakers and many others. Comprehensive guide-lines are given for lacking construction, stressing important points such as the care needed and details to consider in selecting materials, making joints, sealing, baffles mounting, the driver units, wedging the cabinet and paying proper attention to electrical connections to guarantee a 'workable' finished product. Twenty-nine designs are described, from small-sized bass reflex cabinets using 12cm dia. full range drivers, through boxed horns, to monster multi-way high power systems.

Best. nr. 07 15 17  
Prls 179.-

**Designing, Building and Testing Your own Loudspeaker System**

by D. B. Weems

The book contains many detailed plans for speaker-box construction, for one, two or three way systems. Simplified design charts are provided so that it is easy to design your own system. Fullcut details of many different types of crossover networks are given and much of the theory is explained, and includes much background theory with useful mathematical formulae. The appendix even includes a speaker design program listing to run on IBM compatible computers. American book.

Best. nr. 07 15 20  
Prls 269.-

**Public Address Loudspeaker Systems**

by Vivian Cepel

The loudspeaker system is a critical part of any public address installation. All too often, it is woefully inadequate, resulting in poor intelligibility and an unnatural reproduction. This book examines the various systems and their drawbacks, describing LISCA, the Line Source Ceiling Array. This gives astonishing clarity, coverage and reduced feedback, natural source location and even a pseudo-stereo effect. It promises to be the ultimate system for small to medium sized halls. Full step-by-step constructional and installation details are given. Also included: low impedance matching, 100V line systems, transmission lines, and how to design and install industry hearing-aid loops. Few public address systems could not be improved from the information supplied in this book.

Best. nr. 07 15 23  
Prls 79.-

**AMATEUR RADIO BOOKS**

**Amateur Radio for Beginners**  
 - How to Discover the Hobby by Victor Brand G5JNB

Amateur Radio is a hobby which is enjoyed by over one and a half million people. These people are on air from their homes, clubs and schools worldwide. Designed for the absolute beginner, this book could easily be enjoyed by anyone enticed by the vast world of amateur radio. The book goes on to explain how to make your first receiver and progress through to the acquisition of a licence. The grades of Novice (class A or B) licence are described, as is the help provided by R, S, G, B, to obtain the licence. The support and benefits derived from being in a club are described. Hopefully, this will go some way to shattering the common fallacy that 'Ham' radio is some kind of lonely attic hobby. For many people the discovery of amateur radio has been the beginning of an entirely new and unique hobby. They have derived much from its pursuit and have gained knowledge of electronics in the process. Whatever the age or reason this book will ensure the absolute beginner has all the information needed to join the worldwide Amateur radio family. 1991. 65 pages, 210 x 145mm, illustrated.

**Best. nr.** 07 15 71  
**Pris** 69,-

**An Introduction to Amateur Radio**

Amateur radio is a unique and fascinating hobby which has attracted thousands of people since it began at the turn of the century. It encompasses a wide variety of subjects from the historical to the latest technology, and from operating to construction. In fact there is always some aspect of the hobby to interest people. This book gives the newcomer a comprehensive and easy to understand guide through the subject so that the reader can gain the most from the hobby. It then remains an essential reference volume to be used over and over. Topics include the basic aspects of the hobby, such as operating procedures, jamming and setting up a station. Technical topics covered include propagation, receivers, transmitters and amateur satellite. 1989. 160 pages, 176 x 112mm, illustrated.

**Best. nr.** 07 15 74  
**Pris** 59,-

**Setting Up An Amateur Radio Station**

The aim of this book is to give guidance on the decisions which have to be made when setting up any amateur radio or short wave listening station. Often, the experience which is needed is learned by making mistakes, but this can be expensive. To help overcome this, the book gives advice on many aspects of setting up and running an efficient station, and then proceeds by discussing the steps that need to be taken in gaining a transmitting licence. The topics covered include: the equipment needed; setting up the station, which aerials to use; methods of construction; test equipment; and preparing for the licence. 1991. 94 pages, 178 x 111mm, illustrated.

**Best. nr.** 07 15 77  
**Pris** 79,-

**Practical Ideas for Radio Amateurs**

This book is designed to take the new Amateur Radio enthusiast a little further. It offers a wealth of hints, tips and general practical advice for transmitting amateurs and short wave listeners. The book is divided into chapters, based around a particular aspect of amateur radio, such as the shack, aerials, constructional techniques. The Circutidea chapter goes beyond offering a range of circuit designs. Instead it aims to be a source of useful ideas. Some of which may be incorporated into other circuits to improve them or add facilities. 1988. 125 pages, 210 x 150mm, illustrated.

**Best. nr.** 07 15 80  
**Pris** 119,-

**Surplus 2-Way Radio Conversion Handbook**

As 2-way radio equipment, such as used by the police and other emergency services, is replaced, these sets become available on the surplus market for very economic prices and they can often out-perform purpose designed amateur radio equipment! This book explains how to modify these sets to amateur radio frequencies, describing the sort of equipment suitable for conversion, together with relevant photographs and sources of supply. The book gives alignment and modification details covering virtually every variety of surplus P-Ve equipment suitable for modification, since P-Ve sets vastly outnumber the surplus market, which explains their emphasis. This book is the reference handbook that amateur radio operators have been waiting for. 1989. 223 pages, 232 x 155mm, illustrated.

**Best. nr.** 07 15 83  
**Pris** 198,-

**An Introduction to VHF/UHF for Radio Amateurs**

The increase in the use of the VHF and UHF bands is none of the largest growth areas within amateur radio. In fact, most radio amateurs have equipment for use on these bands, either by local contacts or simply to exploit some of the many interesting and challenging aspects of so doing. This book covers the essentials required to get in the most from using the VHF and UHF bands. As such it will be of use to both the newcomer and the more experienced enthusiast alike. Topics include propagation, the bands and channels, aerials, receivers, transmitters, and a special chapter on scanners. In addition, operation of repeaters and modes is included together with DXing and data modes; and a section on packet radio. 1990. 110 pages, 178 x 111mm, illustrated.

**Best. nr.** 07 15 85  
**Pris** 69,-

**Communications Satellites**

There are a large number of amateur communications satellites around the world, traversing the globe continuously and they can be tracked and their signals received with relatively inexpensive equipment. This equipment can be connected to a home computer such as the BBC micro or an IBM compatible PC for decoding the signal. This book describes several currently available systems, their connection to an appropriate computer and how they can be operated with suitable software. The results of decoding signals containing such information as telemetry data and weather pictures are demonstrated and will hopefully encourage the reader to become actively involved in pursuing this fascinating activity, which embraces many aspects of electronics, engineering and science as well as being an encapsulation of information technology. 1990. 102 pages, 178 x 110mm, illustrated.

**Best. nr.** 07 15 89  
**Pris** 79,-

**Newnes Amateur Radio Computing Handbook**

The widespread availability of small computers has changed the lives of radio enthusiasts. Old modes of communication, such as Morse code and even voice, have been joined by new, computer-based methods of communication. Computers are even used to predict which frequencies to use for the best results. Contents include basic radio principles; basic computer principles; software for electronic design; logging and OSI, card software, satellite and geographical software; miscellaneous software; interfacing the computer to the radio; Morse code; RTTY and ASCII; AMTOR, SSTV and FAX packet radio; commercial decoders; controlling a radio with a computer; computer assisted circuit development and appendices. 1990. 363 pages, 214 x 138mm, illustrated.

**Best. nr.** 07 16 16  
**Pris** 269,-

**VHF/UHF Manual 4th Edition**

A companion volume to the Radio Communication Handbook, this book is dedicated to the VHF/UHF enthusiasts who uses frequencies above 30MHz. Its very detailed chapters guide the reader from first principles through to the design and testing of quality VHF and UHF transmitters and receivers. Included in the book are chapters on propagation, receivers, transmitters, filter s, aerials, microwave operated equipment, communication and integrated equipment. 1983. 526 pages, 248 x 184mm, illustrated.

**Best. nr.** 07 16 19  
**Pris** 179,-

**Introduction to Antenna Theory**

Any conducting body exposed to radio waves will have electric currents induced in it and, conversely, any conductor carrying varying electric currents will radiate energy in the form of radio waves. Thus an antenna can take any form from a bedstead to a tin-tack and, while these particular items are seldom encountered in practice, the experimenter can test ideas and innovations with little more than bent copper wire, particularly when it comes to TV and CB wave lengths. This book illustrates the basic concepts relevant to receiving and transmitting an antenna in a manner which emphasises the mechanism involved, supported by copious diagrams and illustrations which help to reduce mathematics to a minimum. 1987. 86 pages, 178 x 110mm, illustrated.

**Best. nr.** 07 16 22  
**Pris** 59,-

**Experimental Antenna Topics**

Although nearly a century has passed since Marconi's first demonstrations of radio communication, there is still research and experiment to be carried out in the field of antenna design and behaviour. The aim of the experimenter will be to make a measurement or confirm a principle, and this can be done with relatively fragile, short-lived apparatus. Because of this, devices described in this book make liberal use of cardboard, cooking oil, plastic bottles, car food tins, etc. These materials are, in general, cheap to obtain and easily worked with simple tools, encouraging the trial-and-error philosophy which leads to innovation and discovery. Although primarily a practical book with text closely supported by diagrams, some formula which can be used by straightforward substitution and some simple graphs have also been included. 1990. 80 pages, 178 x 110mm, illustrated.

**Best. nr.** 07 16 25  
**Pris** 79,-

**Practical Wire Antennas Effective H.F. Designs for the Radio Amateur**

Wire antennas offer one of the most cost-effective ways of putting out a good signal on the HF bands, and this practical guide to their construction has something to interest every amateur on a budget. Many different types are covered, ranging from simple dipoles to ingenious, multi-wire systems, even under ground antennas! Full details of each antenna are included, making theory has been kept to a minimum. Instead, the author has shared his years of experience in this field, offering down-to-earth advice that will be appreciated by beginners and enthusiasts alike. No-one who builds and uses wire antennas can afford to be without this handy guide. 1989. 100 pages, 244 x 184mm, illustrated.

**25 Simple Shortwave Broadcast Band Aerials**

25 simple shortwave aerial project ideas are covered in this easy to understand, illustrated book. 1984. 68 pages, 178 x 112mm, illustrated.

**Best. nr.** 07 16 31  
**Pris** 48,-

**25 Simple Indoor and Window Aerials**

For the short-wave listening enthusiast who may be living in a flat or similar accommodation where the usual external aerials is impossible, this book describes how one can install aerials in or around the room, ceiling, windows, attic, etc. Twenty-five different permutations are shown in detail. The book also shows how simple variations can be improved for optimum performance. Much information is given on the short-wave bands, aerial directivity, time zones, working dimensions etc. 1984. 64 pages, 178 x 110mm, illustrated.

**Best. nr.** 07 16 34  
**Pris** 39,-

**25 Simple Tropical and MW Band Aerials**

Not about how to construct an aerial that will withstand the climatic rigours of a tropical climate, rather, this book contains details of how to construct antennas for receiving the 60, 75, 90 and 120 metre tropical broadcast bands. The 49 metre band is also included. In addition, information is given for the construction of MW aerials in the 550-1600kHz band. An essential addition to the library of all radio amateurs. 1984. 54 pages, 177 x 110mm, illustrated.

**Best. nr.** 07 16 37  
**Pris** 39,-

**H.F. Antennas for All Locations**

Amateur shortwave enthusiasts have been using H.F. antennas of various sorts for some sixty years or more, some of the best antennas in use today were designed twenty or thirty years ago and yet the search for better ones continues unabated. This book makes several challenges to established ideas and practices. In the first part a theory of antenna radiation and reception is dealt with in fresh, and in the second part these theories are put into practice with actual working antenna designs. In this book you will find many solutions offering a substantial reduction in the size, weight and cost of various well known H.F. antenna designs without compromising performance. The book deals with waves and fields, gain and losses, antenna feeds, beams, arrays, barrow, designing, construction and erection, including a chapter on how to design use or render invisible external outdoor aerials. Although primarily aimed at the shortwave user, there are also many sound principles applicable to aerials for all sorts of other applications. 1982. 284 pages, 245 x 190mm, illustrated.

**Marine UK Radio Frequency Guide**

**Compiled by Bill Laver**  
Produced for the benefit of the many enthusiasts who enjoy listening to marine radio transmissions, this book is entirely devoted to UK stations as it is felt that these provide the greatest interest for listeners in the British Isles. It is intended to be a handy reference book for the listener and is not a definitive manual, but contains information that has been taken from official publications and reference books. The frequencies cover both the VHF and short wave bands and to successfully monitor all those listed would require the use of two receivers, one for HF up to 30MHz, and another to cover the marine band in the VHF segment to 174MHz. The information has been kept as concise as possible while providing the fullest details from the point of view of the listener. Channel numbers are also included for receivers, with which they are calibrated, manners are more familiar with channels than frequencies, and coast stations, usually direct ships to which channel to use, so you will need to know what they are. The information will fill a need that many have considered long overdue.

1989, 64 pages, 298 x 210mm

**The Complete VHF/UHF Frequency Guide**

**by Bill Laver**  
The pressure on frequency space in the VHF/UHF bands, together with technological improvements, results in almost endless changes and amendments that have recently occurred. These include 25kHz channel stepping in both bands, requiring that many VHF and HF frequencies be re-allocated. Similarly private mobile radio, due to increasing use which is now causing major overcrowding problems in the VHF band. The removal of 3 TV services in the UK has now made the area centred around 200MHz available to many PWR users, and clearly the use of UHF will also be actively promoted by the DTI who will be anxious that the pressure be taken off the frequencies below 200MHz. And newly launched public telephone and satellite services will require more airwave space. Consequently the bands have gone through a major re-shuffle making it difficult to find some transmitters again because they have moved. Covers equipment requirements including signals, the future of VHF/UHF communications, frequency guide to 28 to 225MHz, military aeronautical band of 225 to 399MHz, and a frequency guide to 399-9MHz to 47.2GHz

**International Radio Stations Guide**

**by P. Shore**  
A fully revised and updated edition which includes as much up-to-date information as possible, eliminating that which is no longer current or accurate. It is presented in a most readable way, and includes in many of the tables the town and country in which the radio station's transmitter is sited. The transmission frequency in kHz, MHz and/or wavelength in metres, plus the ERP in kW is listed. The book is divided into fifteen sections, medium listings of: worldwide short wave stations; medium wave stations in Europe, Middle East and Africa; and UK FM stations. There are listings of broadcasts in English, as well as useful information for SWLs such as time differences around the world, country codes, using the ISRG, choosing a short wave receiver and lots more

**Guide to Satellite TV Installation, Reception & Repair**

**Second Edition by D.J. Stephenson**  
A practical guide, without excessive theory, mathematics, to the installation and servicing of satellite TV receiving equipment, primarily for those involved in the aerial installation and TV trials

The book includes computer programs, written in the simplest Microsoft dialect (BASIC) to run on any PC or 8-bit micro, for the calculation of elevation, azimuth, polar and declination angles from any point in Europe for any current or future satellite. Among the many practical matters covered are the problems of 'sparks', rain, trees, and vandals (the latter solved by the two-drum high dish-mounting rule). Contents include an overview of satellite TV, antenna, head units, cables, the amplifiers and connectors, satellite receivers, the 'linked budget' calculation, installation and alignment of antennas and cabling, indoor wiring up, repairs and appendices and glossary.

**Newnes Guide to TV and Video Technology**

**by Eugene Trundle**  
This book represents a breakthrough in terms of value for money (technical information). Based on two of the most popular technical guides, this new edition brings together in depth accounts of television and VCR technology. In twenty one chapters, over 250 illustrations and 400 odd pages, the technicalities of television, video and allied equipment are lucidly and concisely explained for the benefit of technicians, students, laymen and others. Coverage is wide and deep, extending from the camera lens via video tape signal processing and deck management to the very latest TV screen technology. Along the way we look at space satellites, microcomputers and such practical matters as video recorder servicing and maintenance. Eugene Trundle, a practising video and TV engineer, has a knack of conveying highly technical information in the form of a 'good read'. It is well demonstrated here

**ELECTRONIC SERVICING Audio Amplifier Fault-Finding Chart**

**by Chas. E. Miller**  
This chart has been designed to help the reader approach fault rectification and repair of audio amplifiers in a systematic and logical way. The author has developed the chart by drawing on many years of experience in repairing audio and hi-fi systems and used properly, should enable the reader to trace many common faults reasonably quickly. All the reader has to do is select one of the faults shown at the top of the chart, then follow the arrows carrying out the suggested checks in sequence until the fault is cleared.

**Servicing Audio and Hi-Fi Equipment**

**by Nick Beer**  
Written specially for service technicians and engineers, this book is designed as a bench-side companion and guide. Its purpose is to base and speed up the process of fault-diagnosis, repair and testing of all classes of home audio equipment: recorders, amplifiers, playback machines. It is not a textbook, but written in a light style and is equally useful to the hobbyist and domestic hi-fi enthusiast, and anyone who needs help in identifying a problem. It examines both the mechanics and electronics of domestic audio equipment in a down-to-earth and practical way, concentrating on what goes wrong, how to track down problems and how to solve them. Sixteen comprehensive chapters range from the simplest AM radio to the intricacies of CD and DAT systems. Along the way, such diverse subjects as servos, speakers, diodes and 'dirty heads', motors and microprocessors, turn tables and transistors are examined, together with the techniques and test equipment needed to sort them out and set them up. Fully illustrated with photographs, diagrams, fault-finding charts and circuits, the book also includes a comprehensive guide to manufacturers and suppliers, and a 'symptom index' for quick access to specific advice and suggestions in particular areas. The book is especially reliable for offering some advice, as part of the section on repair techniques, about handling SMDs (Surface Mounted Devices), and how to remove and replace these tiny components and what to watch out for.

**Broadcast Television Fundamentals**

**by Michael Tancock**  
This book deals with the fundamental of television with special emphasis given to the techniques used in broadcasting. It is aimed at technicians having a good general knowledge of electronics, including some digital techniques, but who are unfamiliar with the special requirements needed to produce high quality television pictures. Also suitable for graduate electronics engineers who have not previously dealt with the engineering aspects of television. The book begins with the fundamental considerations of the portrayal of motion, deals in some detail with the colourimetry of television, and goes on to look at the very latest techniques such as CCD sensors, high-definition television, MAC coding and digital data communications. The explanations are detailed but deliberately keep the use of mathematics to a minimum. Although specific examples are based upon the UK television system, the NTSC and SECAM systems are also examined in sufficient depth to make the book international in scope.

**Satellite Television Installation Guide**

**Third Edition by John Breeds**  
The purpose of this book is to help newcomers to correctly align both azimuth and elevation and polar mount dish types. It is accurately set up then the dish will be able to automatically track the satellites available now, and those launched in the future. The author's up-to-date knowledge and skills normally associated with installing terrestrial UHF aerials are assumed. The book provides detailed guidelines on how to install a dish and receive satellite pictures. There are no mathematical explanations or complex formulae involved. The notes and procedures given are based on practical experience. They provide readers with

**Air Band Radio Handbook**

**Third Edition by David I. Smith**  
Airband radiolisting allows you to eavesdrop on the conversations between aircraft and those on the ground who control them, and is an increasingly popular and fascinating hobby. It not only assists in the recognition of aircraft flying overhead, but also provides an insight into the complex world of air-traffic control. The author, who is an air-traffic controller by profession, describes the types of air band radio available and how to use them. With the intricacies of air-traffic control and its jargon explained, you will be able to translate what you hear into what is actually going on over your head. The book also includes full appendices containing comprehensive, up-to-date listings of VHF, UHF and HF frequencies, call signs etc. This extensively revised and updated edition maintains the book's position as the indispensable guide to the hobby, and is the essential companion for every air band radio enthusiast.

**Fault Diagnosis of Digital Systems**

by Don L. Camon

This book helps the reader to understand the workings of digital systems and operation of the components in the systems so that they can go on to tackle fault-finding, and the book covers this in great detail. A must for those who are concerned about the welfare and maintenance of their home computer, and is also of use to those wanting to take up the servicing of digital systems as a career.

**Microcomputer Fault-Finding and Design**

by Robin Holland

This book describes the procedures and test equipment that can be applied to the fault-finding of microprocessor equipment. In the process, you will also get an idea of how such systems are put together. The book reviews the principles of microprocessor operation, describes the various test methods such as board testing, diagnostic software, peripheral testing, signal analysis, logic analysis and in-circuit emulation. The book includes a series of applications studies of typical microcomputer systems designed to give the reader an understanding of formal design procedures and servicing requirements.

The book concludes with useful appendices describing a range of established microprocessors, which include the Intels 8080 and 8085, the 6800 and 6801, pin-outs of SN7400 and SN74LS00 series TTL devices, and a full ASCII character set.

**Electronic Fault Diagnosis**

Third Edition

by G.C. Loveday

The ability to rapidly diagnose the causes of faults in electronic equipment and circuits is one of the important skills that can be acquired by the electronic technician or hobbyist. This book is intended to serve as an introduction to the subject. The text concentrates mainly on component faults occurring in particular types of circuit rather than the fault-finding techniques used for localising faults in complete electronic equipment or systems. However, there is a section that deals briefly with system fault-finding methods. The majority of the circuits have been built and tested and then measurements made under fault conditions, and it is hoped that the reader should construct or breadboard the circuits to produce practical projects with which to learn fault-finding. For this reason readily available components, i.e. non-specialised ones, have been chosen.

The third edition a basic introduction to fault-finding microprocessor-based systems is included, showing an example designed around an 8-bit microprocessor using readily available chips. The book also reflects other important trends in the field of electronics, and includes notes and exercises on opto-isolators, timer ICs, SMDP designs and power FETs.

1988. 131 pages. 245x183mm, illustrated.

**Troubleshooting and Repairing CD Players**

by Homer L. Davidson

During the past five years, compact disc players have enjoyed continuous growth in popularity because of the remarkable fidelity, clarity and dynamic range compact discs (CDs) are capable of producing. But, like all machines, CD players require maintenance and do occasionally "break" down. Repairing these units can be very profitable, if you know how. Now an experienced electronics professional helps you learn to troubleshoot and repair this complicated electronic device, saving you money and time. Each section, circuit and component and how they work together is explained. All the latest technology used in designing table-top, portable, and automatic units has been included. Several major manufacturers of audio equipment have provided service literature and the actual schematic drawings they use in the production of their units. Combined with the author's expertise, the result is a very thorough book. An invaluable reference for the technician and the electronics do-it-yourselfer alike. American book.

1989. 351 pages. 235 x 188mm, illustrated.

**Best. nr.** 07 17 09  
**Pris** 24,-

**Mobile Radio Servicing Handbook**

by Roger Becher, Mike Fitch, Mike Ogley and Geoff Varrall

An authoritative and practical information source-book on the servicing and repair of VHF and UHF mobile radios and base stations, together with the maintenance and support requirements for the overall radio systems, including antenna and mast installations. The fast changing component and system technology of mobile radio communications is having a major impact on the way in which equipment is installed, commissioned, serviced and maintained. The four highly experienced authors have combined to supply the technician or engineer with sufficient information to be able to undertake or plan, repair and

maintenance work on modern mobile radio systems, with hand-held or vehicle mounted mobiles. In addition, the book covers the impact of data over radio, cellular radio, and trunking technologies on servicing, diagnosis and repair procedures.

Essential background topics covered include radio theory, amplitude (AM) and frequency (FM) modulation, radio wave propagation, reception and modulation, fundamentals of receiver and transmitter systems, principles of transmitter and receiver design, synthesiser techniques, selective call signalling and the digital signalling control and access protocols of cellular and trunked radio, but the handbook is primarily a source of readily accessible information on how to find and repair antennae-to-circuit module and component level.

1989. 296 pages. 240 x 160mm hard-cover, illustrated.

**Troubleshooting and Repairing Personal Computers**

Second Edition: Revised and Expanded to include the Latest Intel and Motorola Microprocessors

by Ar Margolis

This all-in-one volume has been updated with the latest information on today's most powerful microprocessors, including the Intel 80386 and 80486, as well as the latest laptops, video displays, disk drives, and power supplies. At the same time, the book retains as much as possible the information contained in previous volumes for earlier personal computers, so that this second edition provides background theory and practical techniques for servicing Apple II, Macintosh, Amiga, Commodore and IBM PC or compatible systems, in other words both 8-bit and 16-bit machines. You need a combination of tools, technique and technician-level theory of operation, which is both general and specific, and is shown in the book.

Computers are covered from their beginnings in the late 1970s, with specific emphasis on the IBM and clone machines, the Apple and Commodore computers, and others. Twenty-six chapters cover aspects such as diagnosing symptoms, what test equipment to use, how to take computers apart and put them back together again, using chip location guides, actual repair procedures and using logical diagnostic software, desoldering and resoldering the common DIPs and SMDs, explanation of typical PC operation, chip circuits, including 8-, 16- and 32-bit microprocessors, right up to a special chapter on the 80486. This is followed by buses and slots and their importance as test points, memory maps, display monitor interfaces, video adaptor cards (including VGA), and disk drives. The book finishes with a chapter devoted to safety first!

Warning: references may be made to the American standard 110V AC mains supply. You should translate these into the English 240V AC mains with their higher voltage level.

1991. 695 pages. 235 x 186mm, illustrated. American book.

**Best. nr.** 07 17 33  
**Pris** 329,-

**Servicing TV & Video Equipment**

by Eugene Trundle

This 'hands-on' servicing book is specifically aimed at repair and service technicians and engineers, but students and laypeople should also find it useful. It guides its readers in test and diagnostic procedures for quick fault-finding in domestic video products, namely TVs, VCRs, camera sets and camcorders. Based on many years of practical bench and field experience, the book has a minimum regard to sheer technical principles and circuit explanations, which are well covered elsewhere. Here the emphasis is on the practical rules-and-boils business of fault diagnosis and repair. Seventeen chapters are individually targeted on separate aspects of the equipment, dwelling longest on the most troublesome sections: TV power supplies, line timebases, intermittent faults and repair techniques.

**Best. nr.** 07 17 42  
**Pris** 360,-

Of the 225 illustrations, fifty-four are off-screen photographs, and thirteen are fast-finding charts. A symptom index is included for easy reference to the storehouse of practical advice straight from the repair bench.

1989. 208 pages. 253 x 194mm, illustrated.

**Home VCR Repair Illustrated**

Service & Repair Your Own VCR and Save a Bundle

by Richard Wilkins & Cheryl A. Hubbard

This book was based on an accumulation of ideas and the experience of the author methods described are simple and safe to use on any VCR, if you follow the instructions carefully. The books designed to teach you how to do-it-yourself in your own home, using household items and basic tools and step-by-step instructions. No test equipment is involved. The book is broken down into sections that correspond to each particular section of a VCR, so you can easily proceed to the relevant section. Most chapters contain a review section, providing step-by-step instructions to assist in diagnosis and repair. This also acts as a checklist so you don't miss any important steps when carrying out repairs. The examples discussed and shown in the photographs try to cover every commercial possibility and at no time is any example a specific make or model of VCR. Warning: references may be made to the American standard 110V AC mains supply. You should translate these into the English 240V AC mains with their higher voltage level.

1991. 398 pages. 234 x 188mm, illustrated. American book.

## The Dishwasher Manual

**A 'Haynes' Manual**  
by **Graham Dixon**

The household's complete DIY guide to plumbing, maintaining and repairing domestic dishwashing machines. All popular makes and models, spanning at least a decade, are covered. As with Haynes' well-known car and motorcycle owners' workshop manuals, this book places great emphasis on the experience gained through 'actually' doing the job on the machine in question and overcoming problems as they occur. The models covered include those by AEG, ASEA, Balmuccini, Beley, Bendix, Blomberg, Bosch, Candy, Carlton, Colson, Credo, De Dietrich, Electrolux, Fagor, Frunlo, Hoover, Hotpoint, Kenwood, Miele, Indesit, Jackson, Juro, Kelvinator, Kenwood, Miele, Nefit, Philco, Philips, Prowoda, Samet, Servis, Siemens, Sital, Smeg, Thomson-Brandt, Zanussi, Zerowait. In fact this book is designed to help in the understanding, functioning, maintenance and repair of all domestic dishwashers irrespective of their country of origin or maker's name. As with washing machines, dishwashers are produced in many countries and are exported worldwide. In this book this is invaluable for

dishwasher owner as it covers them. There are chapters full of useful facts such as a table showing the hardness of water around the British Isles, a table of international symbols of the icon type now common glass around the world (e.g. a picture of a wine glass meaning 'fragile') as might be found on dishwasher's descriptive its capabilities, and a list of 'jargon' words and their meanings. 1980, 112 pages, 27.6 x 21.4 cm hard cover, illustrated.

## Trouble shooting and Repairing Power Tools

by **Homel R. Davidson**

Whether you are a woodworker, metalworker, machinist or general DIY'er, you need this time and money-saving guide to the repair of power tools, which will help you diagnose and repair virtually any tool in your workshop. It covers all hand-held drills, Sanders, power screwdrivers to bench-top saws, grinders, routers and lathe. The only repair manual aimed specifically at domestic power tool users, this book covers everything you need to know to keep your tools in good working condition. **WARNING:** This is an American book and there are repeated references to the US 120V mains standard. **YOU SHOULD CONSIDER THESE AS 40V FOR GREATER RESPECT FOR THE HIGHER VOLTAGE LEVEL.** 1990, 260 pages, 235 x 187 mm, illustrated, American book.

## MICROPROCESSOR BOOKS

by **Rodney Zaks & Alexander Wolfe**

A basic text on microprocessors discussing concepts and definitions, how the micro operates, techniques and components needed to implement memory and input/output functions; relative merits of major microprocessors; how to assemble the components into a system; applications and how to build for them; interfacing to standard peripherals and simple programming, American book. 1987, 604 pages, 228 x 190 mm, illustrated.

## An Introduction to Microcomputer Systems

Architecture & Interfacing  
by **John Fulcher**

Provides a thorough modern and up-to-date introduction to microprocessor interfacing, as well as general introduction to the fundamentals of microcomputer architecture. Discussion of the hardware and software aspects of interfacing are woven together and exemplified by reference to two industry standard 16-bit microprocessors. The Intel 8086 and the Motorola 68000. Contains over 350 diagrams and written in a clear and friendly style, and packed with up-to-date specifications and data. Numerous programming examples are shown based on the two standard 16-bit microprocessors, with self test objectives and assessment review questions. Suitable for students of computer science and

## Microprocessor System Design

A Practical Introduction  
by **Michael Sparks**

This book introduces the essential concepts and techniques that underlie the design of useful electronic circuits, especially microprocessor boards and their peripherals. No previous knowledge of electronics assumed. New terms and ideas are explained as they arise, and maths and jargon are kept to a minimum, the book concentrates on helping the reader acquire and understand the few relatively simple elements and techniques from which complex circuits are built up. There is also plenty of information about other electronic circuits and devices, including op-amps. After an introduction to these electronic circuits, both analogue and digital components, op-amps and P.A.L.s, the book goes on to describe how microprocessors work and how they are used in bus-based systems. To conclude, some practical aspects of electronics design are examined. 1992, 247 pages, 247 x 188 mm, illustrated.

## Microcomputer Interfacing

A Practical Guide for Technicians, Engineers and Scientists  
by **Joseph J. Carr**

The microprocessor has literally revolutionised the electronic instrumentation and control system design fields, and has done so in record time. Where instrument designers were once exclusively analogue engineers, today's instrument designer has to be a synthesist who can integrate the principles of sensor selection, analogue design, and software design and operation. Today, even small instrument are based on microprocessors considered in some detail. There are three basic forms of computer mentioned. First there is of course the IBM PC or compatible type that is now the standard of the industry. But also covered are the Apple II computer and the Z80 chip. The book provides a practical, working basis for both electronics engineers and other technicians whose expertise is in fields other than electronics computing. 1991, 462 pages, 227 x 150 mm, illustrated, American book.

## Interfacing Standards for Computers

An IEEE Monograph  
by **A.C. Maine**

This monograph serves as an introduction to the interfacing techniques and standards used by computers. Both computer standards and local area networks have been deliberately excluded from the text as due to their breadth, complexity and importance, each deserves a monograph in their own right. With communications being such a vital concept in computing systems, the basics of interfacing never fail to come up. The opening chapter defines the need to have devices which have to be physically connected and which must recognise a common data format. The book then goes on to discuss RS-232C Serial Interface Standard, the IEEE-488 General Purpose Parallel Interface bus, the HP-IL Serial Interface Standard and Parallel Interfaces. A note upon Character Code Standards and Appendices giving a data transmission Glossary and a Summary of the CCITT recommendations complete the work. This book will ensure that linking is both good practice, good engineering and has regard to the international standards and protocols. 1988, 62 pages, 209 x 147 mm, illustrated.

## Micro Interfacing Circuits - Book 1

by **R.A. Perold**

It is now perfectly feasible for the average amateur electronics enthusiast to build reasonably simple add-ons for a microcomputer, and to reform it into a versatile and sophisticated piece of equipment for measurement and control. This book will help those who, although having some previous knowledge of electronics, are unfamiliar with 'interfacing'. It describes the basic principles of interfacing circuits to microprocessor equipment, but not just in a purely theoretical manner. The circuits are all practical ones using real devices. Subjects covered include address decoding, parallel and serial interfacing, A to D and D to A converters etc. 1984, 98 pages, 178 x 110 mm, illustrated.

**Best. nr.**

## Micro Interfacing Circuits - Book 2

by **R.A. Perold**

Following on from Micro Interfacing Circuits Book 1, above, Book 2 deals with practical applications beyond parallel or serial interfacing to the microprocessor. It is about real-world interfacing and includes such topics as speech and sound generators, temperature and optical sensors, motor control etc. As with Book 1, practical circuits using real devices are provided with circuit descriptions and any relevant background information, such that anyone with a reasonable knowledge of electronics should be able to use or adapt the provided circuits for their own particular applications. 1984, 90 pages, 178 x 110 mm, illustrated.

## Understanding Computer Systems Architecture

The Complete Course Text  
by **M. Leacy**

This book is aimed at those students entering high level computing courses with non-computing backgrounds and those students wishing to make full use of open access facilities and the environment for their self-study material. This book aims to provide for students in both of these groups, as well as catering for the person new to computing and wanting to find out more about the subject in general, in all its different forms. There are many books at an introductory level which attempt to cover the whole of computing between two covers. Then there are the higher level books which act as reference texts on specialist areas of computing. However, this book fills the gap between the two by covering the fundamentals in just one discipline, called Computer Systems Architecture. It starts at a general introduction level, providing the reader with the knowledge and skills which will enable him or her to consult the more advanced texts with confidence. The material covered comprises the essentials of various courses called Computer Systems, Computer Architecture and Computer Technology, as taught by the author to HND, degree and BCS level. The book assumes that the reader is already familiar with the representation and manipulation of numbers in various bases (binary, octal, hexadecimal, etc.), and has had some experience with writing simple programs in a high level language such as BASIC or Pascal. 1991, 478 pages, 246 x 188 mm, illustrated.

## Microprocessor Interfacing

Principally this book covers the BTEC Level III Microprocessor Interfacing syllabus 036/035, and can be regarded as a comprehensive textbook on the subject of interfacing microprocessors to external peripherals and sensors. The text concentrates on the widely used 65.02, Z80 and 6800/6802 microprocessor families, and is directly applicable to many 8-bit home microprocessors and 'breadboard' systems using typical interfacing devices for each of these are introduced in the text, but the reader is encouraged to obtain complete data sheets on a device when the need arises to solve an individual problem. Copious amounts of detailed hardware and software examples are provided covering signal amplification and filtering to condition the output from external sensors and make them logic compatible, D/A and A/D conversion, data transfer techniques including STD and IEEE-488 bus protocols, and parallel and serial I/O including the EA-RS232 standard. Well recommended for anyone planning a home built microprocessor system, no matter how modest, to communicate with another computer or electronic peripherals including relays, motors, sensors and opto-isolators etc. 1990, 200 pages, 226 x 150 mm, illustrated.

## Microcomputer Interfacing

An Experimental Approach using the Z80  
by **Mike Cavenor & John Arnold**

Adopts a highly practical approach in presenting the logic of micro-computer interfacing. The material is based upon the Z80 MPU, an industry standard, and its support peripheral chips. While it is not the most modern microprocessor, the Z80 nevertheless is ideal for learning the fundamentals of an important subject. The subject is most effectively learned when ample opportunity is provided to reinforce theoretical concepts with relevant real exercises. Fully tested are provided for up to forty actual experiments. In the process, you will have to write much of the assembly language programs yourself, however, the book shows how to do about carrying out the construction of real hardware which includes a monophonic organ and pulse and waveform generators, seven segment displays, keyboard interface, digital storage oscilloscope, intruder alarm controller, serial communications and serial links. Australian book. 1989, 382 pages, 234 x 170 mm, illustrated.

## The Home Electrical Appliance Manual

by **Graham Dixon**

Each year sees an increase in the number and variety of small electrical appliances for use in the home and garden. All these appliances have one thing in common, at some time they will fail to function correctly. Often lack of maintenance is responsible for the failure of the new and old equipment. Although mass production and large volume sales have made many of these items very low cost, it may still be a practical proposition to effect a repair, even though the lack of spares outlets for these items makes it difficult. This book helps you understand how many of our household items work, and from this you can understand how and why faults occur and how to prevent them. 1991, 182 pages, 276 x 212 mm hardcover, illustrated.

Hard Disk Pocket Book by Mike Allen & Tim Kay

An increasing majority of software available today requires a hard disk if it is to be able to perform properly and effectively. The current trend for programs to get larger and more powerful shows no sign of diminishing, so superior hard disks, both in terms of size and performance, are now becoming an essential feature rather than a luxury.

This book is a comprehensive guide to hard disks, covering every aspect from manufacture, drives and components, organisation, utilities and data security. The utilities include DiskManager, Norton Utilities, PC Tools, Spinrite II, XTree, Windows, and ProFinder. In addition, floppy drives are introduced and followed by an investigation into what the future might hold for data storage. Also included is an extensive glossary of terms, acronyms and details associated with hard disks. If you either own one or are of thinking of purchasing one this book is a must.

Best. nr. 07 18 02 Pris 228.-

Hard Disk Quick Reference 1992 Edition

A hard disk can be the most valuable component of your computer system, saving you time and making you more productive. A hard disk enables you to boot your computer and run programs without continually changing floppy disks. This book includes the quick reference information you need to use your hard disk effectively. Designed as a general guide, it tells you how to install and configure a hard disk, and correct common hard disk errors. This hard disk quick reference guide provides general hard disk information and is intended to replace the documentation provided by the hard disk manufacturers, nor any detailed information from other sources. Together with a large number of tips and techniques, this guide provides examples for multiple versions of MS-DOS up to and including DOS 5. Sample directory structures and hard disk error messages help you increase your PC's power through increased efficiency. A variety of solutions are provided on how to solve common hard disk problems. Main areas covered include: organising basics; partitioning and formatting; organising directories and managing files; backing up and restoring files; speeding up operations with batch files; and hard disk maintenance. American book.

Data Communications Pocket Book

Second Edition by Michael Tooley

Presenting, in an succinct manner as possible, information on every day relevance to the world of data communications. Despite the apparent complexity of the subject, care has been taken to ensure that the book is meaningful to as wide a range of readers as possible. Tabulated reference material has been interspersed with brief explanatory text and relevant diagrams, invaluable to anyone involved with the interconnection of computer systems. Technicians and engineers involved with the installation, commissioning and maintenance of data communications equipment, technicians and central staff as the end users of data communications related products; and managers involved with the specification and purchasing of such products and systems. Similarly the book should also appeal to the growing number of enthusiasts using data communications for home management and leisure pursuits.

1982. 176 pages. 195 x 95mm hardcover, illustrated.

The Protection of Computer and Software - Its Technology and Applications Edited by Derrick Graver

Many pieces of commercial software represent the result of many thousands of hours of investment. It is therefore essential for the originator to protect this investment from piracy and corruption. Whilst the law provides certain protection it cannot provide a complete safeguard, and so technical means have emerged. This new edition incorporates chapters on both computer viruses and hacking, covers the state-of-the-art in the technology of software protection, and is intended to create general awareness of the aims and possibilities of this technology. The book describes techniques which can be implemented to protect programs from being used or copied by the copyright infringer and the software pirate.

1982. 321 pages. 228 x 151mm, illustrated.

Best. nr. 07 18 17 Pris 299.-

Computer Engineer's Pocket Book

Third Edition by Michael Tooley

To be able to fully exploit the potential of microprocessors and microcomputers it is becoming increasingly necessary to abandon the old boundaries which have until now existed between what has been called 'hardware' and 'software', simply because it is becoming impossible to work exclusively with one without getting involved with the other. The same is true of any home microcomputer where it is required to be interrelated to the outside world. Includes: popular CP-Instruction sets, character sets, CMOS and TTL IC-pin-outs with internal schematic diagrams, logic symbols, connectors' wiring and a host of glossaries, in fact everything you need to quickly and accurately make up your Veroboard add-ons.

1981. 255 pages. 195 x 95mm, illustrated.

Best. nr. 07 18 14 Pris 229.-

Computer Viruses and Anti-Virus Warfare

by Jan Hruska

The virus danger is here to stay. In the U.S., the Far East and Africa it has already reached epidemic proportions, and it is only a matter of time before it becomes more common in the rest of the world. In just the three months of Spring 1989, the number of separately identifiable viruses increased from seven to seventeen. You must read this fascinating book, especially if you own a PC - some examples of IBM DOS oriented viruses are homing in simple to create and viruser are horrifyingly simple to all about "Trojan horses", "logic bombs" and "worms".

1990. 130 pages. 241 x 187mm, illustrated.

Best. nr. 07 18 20 Pris 319.-

ASSEMBLY AND MACHINE LANGUAGE PROGRAMMING BOOKS An Introduction to 6502 Machine Code

by R.A. & J.W. Penfold

The 6502 microprocessor is used in many popular home computers including the Electron, BBC models A and B, VIC-20, ORIC-1/ATOMS and Altair models. This book illustrates how to use machine code programming with such machines, which enables a vast increase in running speed, instead of using a built-in high-level computer language such as BASIC. The programing does become somewhat more complex however, although it is not as difficult as might be supposed. The book includes some simple demonstration programs which will run on the above computers.

1984. 108 pages. 177 x 110mm, illustrated.

Best. nr. 07 18 23 Pris 99.-

Programming the 6809

by Rodney Zaks & William Leibel

This book covers the 6809 inside and out. You will learn how signals are handled within the chip itself and how to get them to control all essential I/O functions. Whether you are a first time or experienced programmer, this book will make it possible for you to use the 6809 to its fullest capacity.

1982. 362 pages. 227 x 151mm, illustrated.

Assembly Language Subroutines for the 6809

by Lance Leventhal & Sally Cordes

This book serves as both a source and a reference for 6809 assembly language programs, containing a collection of useful subroutines described in a standard format, accompanied by an extensive documentation package covering parameter, results, execution time and memory usage. The collection emphasises common tasks that will be required in many applications including code conversion, array and bit manipulation, data structure management, I/O routines, sorting and searching, and routines handling common family chips such as parallel and serial interfaces and timers. This book will save you much time and effort by not having to write and debug your own standard routine library, instead just choose the specific routines required and go on with the main task of completing your programs. Each routine is provided with test data to verify correct assembly. Recommended.

1989. 385 pages. 235 x 171mm, illustrated.

Best. nr. 07 18 29 Pris 348.-

Assembly Language Subroutines for the 68000

by Lance Leventhal & Fred Cordes

This book is intended as both a source and a reference for the 68000 assembly language programmer. It contains a collection of useful subroutines described in a standard format and accompanied by extensive documentation. The documentation covers the procedure parameters, results, execution time, memory usage and each showing at least one example of execution which provides known test data. The routines will also run on related microprocessors such as the 68008, 68010, 68020 and 68030.

The nature of the library emphasises common tasks that occur in many applications. These tasks include code conversion (integer/hex, decimal, BCD), array manipulation, 16-bit and BCD arithmetic, bit manipulation, shifting, lunctons, string handling, data structure management, sorting and searching.

An Introduction to 68000 Assembly Language

by R.A. & J.W. Penfold

The 68000 series microprocessors currently in use in the Commodore Amiga, Atari ST, Apple Macintosh and Sinclair Q, etc. This book explains the operation of the 68000 and its associated hardware and software in a clear and concise manner. It is written in a clear and readable manner and provides a wealth of information. The basic 68000 architecture is introduced and then each instruction is explained. Many practical programs are given and readers are encouraged to write effective programs. A complete small monitor program which will handle input and output, test programs etc. is also included. In the new edition the 68010 and 68020 are also covered. 1986. 288 pages. 235 x 155mm. Illustrated.

Best. nr. 07 18 35 Price 59.-

Programming the M68000

by Tim King & Brian Knight

This comprehensive guide explains how to program the M68000, which is one of the most advanced microprocessors available at the present time. It is written in a clear and readable manner and provides a wealth of information. The basic M68000 architecture is introduced and then each instruction is explained. Many practical programs are given and readers are encouraged to write effective programs. A complete small monitor program which will handle input and output, test programs etc. is also included. In the new edition the 68010 and 68020 are also covered. 1986. 288 pages. 235 x 155mm. Illustrated.

Best. nr. 07 18 38 Price 348.-

IBM PC Assembly Language and Programming

by Peter Abel

The spread of microprocessors has also caused a renewed interest in assembly language, because a program written in assembly requires considerably less memory space and execution time. Secondly, a knowledge of the resulting machine code provides an understanding of the machine's architecture that no high level language, even such as Pascal or C, can possibly provide. This second edition book can act as both a tutorial and a permanent reference, including DOS manuals through to version 4.01, information unique to the IBM PS/2 series, features of Borland's Turbo assembler, features of Intel's 80386 and 80486 processors, the use of simplified segment addressing (addressing) directives and later additional interrupts, memory management, program overlays and keyboard/timer details. American book. 1991. 560 pages. 254 x 176mm. Illustrated.

Best. nr. 07 18 41 Price 348.-

Assembly Language Subroutines for the 8086

by Lance Leventhal & Sally Cordes

This book is intended as both a source and a reference for the 8086/8088 assembly language programmer. It contains a collection of useful subroutines described in a standard format and documented. The documentation specifies the procedure, parameters, results, execution time, memory usage and each showing at least one example of execution which provides known test data. The routines from this book will also run on 80286, 80386, 80387, and 80486, which are also popular processors for many PCs. The nature of the library emphasizes common tasks that occur in many applications. These tasks include code conversion (e.g. integer/ASCII hex, integer/ASCII decimal, packed BCD); array manipulation; 16-bit and BCD arithmetic; bit manipulation; shifting functions; string handling; data structure management; sorting and searching. There are also examples of I/O, interrupt service and initialization routines for common family chips such as parallel interfaces and timers. You should be able to use these in actual applications and such a library makes for the possibility of producing some complex and sophisticated complete programs written in assembly language. 1989. 410 pages. 235 x 170mm. Illustrated.

Best. nr. 07 18 44 Price 348.-

A Z80 Workshop Manual

by E.A. Parr, B.Sc., C.Eng., M.I.E.E.

The book details the Z80 instruction set and assembly language programming is discussed with examples. Hardware details of the Z80 and associated I/O devices are given. Z80 hex machine code and assembler instructions are given in tabular form along with I/O connections for the devices discussed. 1983. 184 pages. 178 x 110mm. Illustrated.

Best. nr. 07 18 47 Price 59.-

Programming the Z80

by Rodney Zaks

A thorough introduction to machine language programming from basic concepts to advanced data structures and techniques. With detailed examples and numerous programs, the reader will gain not only an understanding of programming in the Z80 language, but also a detailed understanding of the way a microprocessor actually executes instructions. 1982. 626 pages. 228 x 150mm. Illustrated.

Best. nr. 07 18 50 Price 419.-

An Introduction to Z80 Machine Code

by R.A. & J.W. Penfold

Machine code programming is a means whereby the user can get to grips directly with the microprocessor, using the binary numbers which the computer actually handles. This negates using a built-in high-level language such as BASIC, wherein instructions have of necessity a number of options which use up memory and time. Machine Code can be very much faster since only the function you want is the one that is executed; such instructions can easily be only a few machine cycles long. To use Machine Code effectively you have to become familiar with the microprocessor's architecture, its instruction set, use of the Stack, data storage etc. and be reasonably conversant with the hexadecimal binary numbering system. This book shows you how with the Z80 or later Z80A, as used in many popular home computers such as the Sinclair ZX Spectrum and the Amstrad CP464. Some simple demonstration programs are included. 1984. 136 pages. 178 x 111mm. Illustrated.

Best. nr. 07 18 53 Price 59.-

BOOKS TEACHING GW-BASIC for Beginners

PC BASIC Programming for IBM/PC and Compatibles

This is GW-BASIC as provided for PC compatibles (but also identical in use to the IBM PC-BASIC), which are quite capable computers, and this book is intended to help you become an equally capable programmer. The BASIC adheres to the original Microsoft standard in principle and, although it has many extra commands to keep up with the PC, transporting similar Microsoft standard BASIC software from lesser 8-bit micros to a PC is perfectly feasible. The first few chapters begin by showing you the important fundamentals of program writing, such as good programming style, documentation, logic structure and breaking complex problems down into easier modules. In addition you will learn the theoretical and practical foundations of data processing. The copious use of flow-charts illustrates the most important aspect of good program writing; planning the program on paper first. The essential prerequisite before touching the keyboard at all. Each section concludes with exercise problems to solve, going on to more complex problems and hence more complex programs, providing actual hands-on experience working with BASIC on your computer. The language is described in functional stages, commencing with simple input and printing, moving on to variables, arrays, subroutines, file management and disk operations etc. 1990. 322 pages. 228 x 178mm. Illustrated.

Best. nr. 07 18 55 Price 288.-

Understanding PC Software

by R.A. Penfold

The IBM and compatible PCs are now more or less the automatic choice for business computing applications, as well as some scientific, technical, and other applications. They are versatile computers backed up by an unrivalled range of applications software and specialist hardware devices. Within reason, a PC can handle any application. This book is concerned with the software you want is the one that is executed; such instructions can easily be only a few machine cycles long. To use Machine Code effectively you have to become familiar with the microprocessor's architecture, its instruction set, use of the Stack, data storage etc. and be reasonably conversant with the hexadecimal binary numbering system. This book shows you how with the Z80 or later Z80A, as used in many popular home computers such as the Sinclair ZX Spectrum and the Amstrad CP464. Some simple demonstration programs are included. 1984. 136 pages. 178 x 111mm. Illustrated.

Best. nr. 07 18 59 Price 89.-

Visual Basic

by Steven Holzner and Peter Norton

Visual Basic is a tremendous toolbox of programming resources. This book explains how to create your own screen display windows, beginning with the essentials, and following the natural course of development starting with a simple blank window, and then adding colour, graphics, buttons and textboxes, messages and Basic calls' controls'. Dialog boxes, messages and topics that real Windows applications deal with, the clipboard, bitmaps, icons and error handling. There are chapters on debugging and dynamic data exchange, allowing the user to communicate with other Windows applications like those from Microsoft. Getting Windows programs running and producing real results is simply a matter of designing what you want on screen and then letting Visual Basic handle the details. To use the book properly, some familiarity with BASIC is required. Also needed are Windows V3.0 or later, a mouse, and a copy of the Visual Basic software, any version. The book includes over 100 ready-to-run programs. 1991. 449 pages. 235 x 187mm. Illustrated.

Best. nr. 07 18 62 Price 398.-

BASIC Programming

Third Edition by B.J.J. Holmes

The aim of this book is to present to the reader the many facets of the BASIC language, in the context of a college-based course on computer programming. The book has already proved to be very popular with those students studying for computer examinations, where BASIC is the preferred language. In addition, the home-computer enthusiasts who wish to progress beyond the 'game-playing' stage will find in this text invaluable in understanding how to program a computer. This book, however, has not been written for any one dialect, but deliberately for use with any computer that uses BASIC. However, the dialect differences between Microsoft BASIC as used on the IBM PC and compatibles and the BBC/Electron BASIC are included by way of illustration. Throughout this book the emphasis is on structured program design from project planning, and many programming examples are included. Well recommended. 1990. 287 pages. 245 x 190mm. Illustrated.

Best. nr. 07 18 65 Price 139.-

PASCAL Programming

The Complete Course text by B.J.J. Holmes

The aim of this book is to help the reader acquire and develop the skills of computer programming in a block-structured language in order to learn understanding of the related topics of data structures and data processing. It can be regarded as a complete text on programming and the use of data structures. The contents are sufficient to give confidence to any reader who is taking Computer Studies to GCE A, BTEC National and higher national awards, first year undergraduate level and British Computer Society Part 1 examinations. The book is also ideally suited to those requiring a knowledge of programming, yet whose major course of study is not computing, for example engineering students and those requiring a self-study course. It should also serve as a primer for those who can already program in other languages, yet wish to learn Pascal in the shortest possible time. Pascal is essentially a language which has been designed to teach good programming principles, and as such has been much used in universities and other learning institutions and is often required to be used during computing and computer aided design studies. All programs have been compiled and tested, using Borland's Turbo Pascal 5.5, on an IBM compatible PC. However, the reader is directed throughout the text to differences between this dialect and that of Shell/D Pascal, which conforms more to Standard Pascal. The purpose of this is to enable all the programs appearing in the first sixteen chapters to be implemented in other dialects of Pascal that may resemble Standard Pascal. 1991. 463 pages. 243 x 190mm. Illustrated.

Best. nr. 07 18 68 Price 198.-

BASIC and PASCAL in Parallel

by S.J. Wainwright

This book takes the two languages and develops them in both simultaneously. Emphasis is placed on constructive programming by the systematic use of control structures, and modular program design is used throughout. Example programs are used to illustrate the program structures as they are introduced, and the reader can learn by example. As the title suggests the book is intended as a bilingual introduction to languages simultaneously, and to learn programming techniques which are compatible with both languages. 1983. 60 pages. 180 x 110mm. Illustrated.

Best. nr. 07 18 71 Price 23.-

BASIC and FORTH in Parallel

by S.J. Wainwright

Forth is a very different language from BASIC, but this book takes both languages and investigates how things are done in each of them. BASIC is used as a familiar 'handle' with which to grasp the various programming techniques. A FORTH-Stack simulator program is included which runs on a 16k or 48k Spectrum computer. The Stack is central to the operation of FORTH and an understanding of the Stack is fundamental to the FORTH programmer. 1984. 95 pages. 178 x 110mm. Illustrated.

Best. nr. 07 18 74 Price 39.-

BASIC and FORTRAN in Parallel

by S.J. Wainwright & A. Grant

A novel book which can be used to learn FORTRAN or BASIC, or both! It is therefore a very useful language to learn. BASIC needs no introduction - this book covers the two languages, at a very reasonable price. An appendix includes a FORTRAN interpreter written in Sinclair Spectrum BASIC, which supports most of the common features of the language and makes it possible to 'get the feet' of writing FORTRAN programs. 1984. 79 pages. 178 x 110mm. Illustrated.

**A Concise Introduction to Microsoft Works**

by N. Kentaris and P.R.M. Oliver

"Microsoft Works" is an easy to use, integrated package for a PC which incorporates four modules: word processing, spreadsheets with graphics, databases, and communications. The modules are downward compatible with earlier versions (version 2.0 is dealt with in this book). The package comes with its own front-end graphic interface and full documentation. This book was written to help the beginner, and the materials presented on a "what you need to know first" basis, although the underlying structure is such that you don't need to start at the beginning. Experienced users can go to any of the self-contained sections for reference.

1991, 130 pages, 198 x 130mm, illustrated.

**A Concise Introduction to Lotus 1-2-3**

by N. Kentaris

If you are a PC user and want to get to grips with Lotus 1-2-3, then this book will teach you how to do just that, in the shortest and most effective way. The book is written by the non-expert business person in mind, and as such, it has an underlying structure based on what you need to know first, appears first. The more experienced user can start from any section. The more experienced user of Lotus 1-2-3 can be used to build up sample spreadsheet examples, edit, save and retrieve them. How to format labels, enter and format numbers, change the default width of cells, enter formulas and Lotus 1-2-3's in-built functions, and print a worksheet. How to freeze titles on screen, use a non-continuous address range, insert, erase and move blocks, add graphs to a worksheet, add legends and titles to graphs, view and print graphs. How to set up a database management system, sort and search a database, use the find and extract commands to query information held in a database, how to create a simple macro. The book lists all Lotus 1-2-3 indicators, functions and macro commands so that it is self-contained and can be used as a reference book long after the reader becomes an expert in the use of the program.

1989, 144 pages, 198 x 128mm, illustrated.

**A Concise User's Guide to Lotus 1-2-3**

by N. Kentaris and P.R.M. Oliver

Lotus 1-2-3 is a powerful and versatile software package which, over the last few years, has proved its usefulness, not only in the business world but also to scientists and engineers as well. If you are a PC user and want to upgrade to Lotus 1-2-3 Release 3.1, then this book will teach you how to do just that in the shortest and most effective way. It was written with the existing spreadsheet user in mind, and has been designed so that you don't have to start at the beginning and go through to the end. The more experienced user can start at any section as these were designed to be self-contained. You will find out how to generate and manipulate 3-dimensional worksheets and link files together; how to generate and add graphs to a worksheet; edit, preview and print worksheets; how to use the WYSIWYG add-in to produce top quality displays; how to set up a database management system, sort and search a database; use the find, extract and modify commands; how to create macros and custom menus; use macro keywords and debug a macro. The book lists all Lotus 1-2-3 indicators, functions and macro commands so that it is self-contained and can be used as a reference long after you become an expert in the use of the program.

**DOSS Made Easy**

by Herbert Schildt

This book is for anyone who wants to learn how to use DOS version 5. No prior experience with computers is necessary for learning DOS. This book will have previous experience in running an older version of DOS, you will be able to advance quickly through the first few chapters, concentrating mostly on the new features of DOS 5, and there are many. DOS is a complex program with many commands and options. This book lists its most useful commands quickly and easily as possible. After reading just the first three chapters, you will be able to begin using your application programs. By the time you finish this book, you will be running DOS like a professional user.

This book is a tutorial in nature and includes many hands-on examples. For best results you should work through each example using your own computer. American book. 1991, 412 pages, 235 x 187mm, illustrated.  
Best. nr. 07 18 98  
Pris 279.-

**Peter Norton's DOS 5 Guide**

Four-volume edition

This book is about getting started with DOS - the disk operating system for the family of IBM and compatible personal computers - but it doesn't stop with DOS. The book also teaches you how to become an effective user of a small PC. On the one hand this book tells you about DOS and how to make good use of the commands that are built into it. On the other, it also gives you information on such topics as how to choose intelligently among the hundreds of programs offered for sale. In these pages, you'll find out how to make your PC work for you. You'll learn what works and what doesn't, what theoretical, but based on 25 years of experience, Peter Norton has deduced from PCs to mainframes. PC's and this book is the result of that experience, and is based on sound common sense. Highly recommended for new users to DOS 5 or DOS 6.

1991, 498 pages, 234 x 187mm, illustrated.

**A Concise Introduction to GEM**

J. W. Pentold

If you have a computer which uses GEM, this book is designed to help you get the most from it. Through many examples, you will straight forward, you will find those parts which are not explained elsewhere. Not just written as an introduction for new users, it has also been structured to provide a convenient, compact source of reference for more experienced users, and serves to refresh the liner points for anyone who has not used GEM for some time.

The book describes GEM and its capabilities, how it can be used for the housekeeping of both hard and floppy disk files, how to configure and run applications from the GEM desktop to the best advantage. All versions of GEM up to release 3.01 and including the versions supplied with the Amstrad PC and Atari ST machines are covered, and all the GEM menus, graphics and other special features available to users within GEM applications programs. 1989, 80 pages, 195 x 100mm, illustrated.  
Best. nr. 07 18 92  
Pris 59.-

**Mastering C Programming**

by W. Arthur Chapman

This book is intended as a first course in C programming. It is equally suitable for anyone new to programming as it is for those equally familiar with another language. Access to a compiler running on C is assumed, and with this condition the text is conducive to self study, and all the examples have been tested using Turbo C V2.0 running on a PC, but the transportability of C should make them equally acceptable to other C compilers.

The main aim is to introduce C, and to provide the essentials of the language. Throughout the book a number of further more substantial programs are developed to provide a context for the use of C rather than larger programs, and each is discussed and developed from the start. Three main programs are dealt with in detail, these being a calculator, a line editor and a simple bridge tutor. As you work through the material you should develop a good understanding of C and C programming. 1991, 307 pages, 234 x 155mm, illustrated.  
Best. nr. 07 18 86  
Pris 99.-

**Structured Programming in COBOL**

The Complete Course Text - Second Edition by B.J. Holmes

As with others of its type, this book is primarily aimed at the student, however, it's equally relevant to the home computer enthusiast wanting to exploit alternative high level languages, in this case COBOL. This text can be used either as a first course in programming or for transferring from another high level language, such as BASIC.

This book is written around two complementary themes, the design of structured computer programs based on the techniques from Jackson Structured Programming (JSP) and the methods available for coding these designs in the COBOL language. JSP has been adopted by many in the programming industry, as a standard for designing structured programs. Standard COBOL-85 has been used in the translation of the JSP program designs. Because of the subset of language statements used, it is possible to compile the programs using older compilers that conform to the ANS 1974 standard, but if any older compiler is necessary to make very minor amendments to the code in the text. The nature of these, where applicable, are fully described. The aim of COBOL is to provide a means whereby programs can be written, as near as possible, in plain English sentences, so that business people are better able to understand what the program code may be doing without having to learn an esoteric language. The text is ideal for readers wanting to learn structured program design and COBOL in a thorough and methodical manner. 1991, 526 pages, 245 x 190mm, illustrated.  
Best. nr. 07 18 80  
Pris 199.-

**DOS for Dummies**

A Reference book for the Rest of Us!

The basic idea of this book is very simple - you are an intelligent person, but don't know anything about DOS. What some of you have absolutely no intention of becoming a DOS wizard. If you just want to be using your PC, then this is the book for you. It covers 100% of all the things you will be doing with your computer. All the common activities, the daily chores, the painful things that go with living with a computer are all described here, in English. The book is meant to be read like a reference and not read from cover to cover, although there is nothing to stop you doing this, in fact it is a very amusing book to read. In spite of the author's proclamation about not bothing with "useless" technical details, there are many separate text boxes containing more detailed information about the function, operation and sometimes history of various DOS commands. The book is essentially written for DOS 5, but is also relevant for earlier versions 4.01 and 3.3. There are six sections altogether, covering absolute basics (plugging in and switching on etc), the "Non-Nerd's Guide to PC Hardware", some for software; "When it's time to toss in the towel", the "Section of Tens (ten common mistakes, ten things you shouldn't ever do, DOS references, a highly recommended American book. 1991, 320 pages, 234 x 188mm, illustrated.  
Best. nr. 07 18 95  
Pris 259.-

**SPECIALISED SOFTWARE BOOKS**

**A Concise Introduction to OS/2**

If you are a multi-tasking PC user and want to get the most out of your computer, then you must learn OS 2 operating system. With this Concise Introduction to OS 2 you will learn to do just that in the shortest and most efficient way. The more experienced user can start from any section. How the OS 2 operating system is structured so that you understand what happens when you first switch on your computer. How to use the OS 2 commands to perform various house-keeping operations on your disk files. How to direct and sub-directories can be employed to organise the way you keep files on your disk so that your system's efficiency is maximised. How to use the editor to fully configure your system and AUTOEXEC.BAT files. How to write batch files to automate the operation and use of your system. How to manage your system's environment. The book covers both the command-line mode of processing and the Presentation Manager of OS 2 Standard Edition 1.1, as implemented by IBM and Microsoft. 1989, 72 pages, 198 x 130mm, illustrated.  
Best. nr. 07 18 89  
Pris 59.-

**Learning to Program in C**

This book is a guide to C programming, C statements are introduced and explained with the help of simple, but completely working programs. Graded problems are set at the end of each chapter, some with a financial or scientific context, so that the user can choose their own level of problem difficulty on which to practice with some additional choice in precedence of the field of application. Full working solutions appear at the back of the book. 1989, 128 pages, 198 x 130mm, illustrated.

**A Concise Introduction to Windows 3.0**

by N. Kentaris

If you are a PC user and want to get to grips with Microsoft's Windows 3.0 then this book will teach you how to do just that in the quickest and most effective way. The book was written with the busy, non-expert, person in mind. However, the more experienced user can begin at any section, as the sections were designed to be self-contained. The book explains hardware requirements needed to run Windows 3.0 successfully, and how to install, customise and fine-tune the program; how to manipulate Windows screens and how to run Windows and DOS applications under the Windows Graphical User Interface (GUI) environment; how to use the Windows Program Manager and Print Manager to advantage; how to use the word processor accessory Write to type, edit, format, print and save documents.

Also explained is the use of Paintbrush and its tools to draw and edit drawings, and how to set up, sort and search a Cardfile database and exploit its audiovisual feature. How to use the Windows Calendar to enter appointments, add special times and alarms, and how to use the Terminal accessory to connect to remote systems. 1991, 128 pages, 198 x 130mm, illustrated.  
Best. nr. 07 19 13  
Pris 69.-

## VI ER 10 ÅR!

Arngren Electronics feirer 10-års jubileum i 1993. Vi ønsker å dele dette med deg, og du får derfor kjøpe de følgende produkter til sterk reduserte priser. OBS! Begrenset antall. Ønsker du mer informasjon om produktene, se da i hovedkatalogen for 1992. Har du ikke denne, kan du bestille denne hos oss. Katalogen er på 300 sider i A4, med over 10.000 produkter. Best. nr. 0001. Pris kr. 20.-

### Bærbar kassettradio

Mark W10273 Stereo FM/AM-radio og dobbel kassettpiller. Kontinuerlig avspilling, kopiering med to hastigheter. Innebygd mikrofon og tilkobling for hodetelefoner. Kan kjøres på 220V eller med 6 R14-batterier.

Best.nr. Førpris Ny pris  
05 00 07 800.- 598.-

### Lommedisco med radio

Mark SK-52 Stereo kassettpiller med autostopp. FM/AM stereo radio med automatisk frekvenskontroll (AFC). Bassbooster. Leveres med belteklemme og hodetelefon.

Best.nr. Førpris Ny pris  
05 00 17 400.- 299.-

### Stereo lommeradio

Realistic SZA139 FM/AM radio med innebygd høyttaler og uttak for hodetelefoner. Leveres med øretelefoner, som har innebygd antenne.

Best.nr. Førpris Ny pris  
05 00 13 322.- 250.-

### Bærbar radio

Crown C150 Mono FM/AM radio med toneregulering. Robust utførelse med bærehåndtak. Bruker 220V eller 4 UM-3 batterier.

## 12V satelittanlegg

Tar ned alle TV-kanaler fra Astra-satelittene. Perfekt til hytte, campingvogn etc. 60cm aluminiumantenne tar inn bra bilder fra Trøndelag og sydover. Innebygd akustisk satelittfinder. Kan også brukes i hjemmet med utvendig strømforsyning (best.nr. 09 02 67 kr. 348.-).

**Best.nr.** 28 86 59 **Førpris** 4998.- **Ny pris** 3998.-

## Profesjonell mikseputt

Robust 9-kanalers mikseputt for profesjonelt bruk. Forfylte phonokontakter for optimal lyd kvalitet. Innganger: 2 DAT, 2 CD, 3 phono, 2 mic, tape og aux. Utganger: 2 master, 3 tape samt line out. Regulerbar monitorutgang for hodetelefoner. Frekvensomr. 30Hz-30kHz, kanalseparasjon 60dB, utgang 775mV. Leveres med NEMKO-godkjent utvendig strømforsyning.

**Best.nr.** 30 79 20 **Førpris** 7421.- **Ny pris** 4998.-

## Høyttalerverlger

For opptil fire sett høyttalere. Nå kan du ha ekstrahøyttalere på kjøkkenet, i peisestua etc. Max 200W.

**Best.nr.** 31 14 72 **Førpris** 539.- **Ny pris** 399.-

## 12V varmeanlegg

For bil, båt campingvogn etc. Komplet sett med vifte/varmeapparat, relé, bryter, konsoll og kabler.300W varmespelle, støyskjermet. Bruker 12V DC. Mål 225x60mmØ.

**Best.nr.** 84 14 12 **Førpris** 1226.- **Ny pris** 799.-

### Memoblokk for bil

Festes med sugeskopp på frontruten. Alltid for hånden, velegnet til å føre bensinforbruk, avstander, adresser etc.

Best.nr. Førpris Ny pris  
84 93 96 42.50 29.-

2 stk. ekstrablokker

Best.nr. Pris  
83 94 00 19.50

### Solcellekalkulator

I kredittkortformat, kun 2.5mm tykk. Med +, -, ×, ÷, %, √ og minne. Lettlest LCD-panel med 14mm høye tall.

Best.nr. Førpris Ny pris  
77 10 15 50.- 29.-

### Comet utendørspumpe

Vannavkjølt veskepumpe (ikke selvsugende) for utedørs bruk. Kan suge opptil 10 liter i minuttet, og løfte opptil 5.7m. Monteres 20cm under sugeåpningen. Trenger 12V DC, 1.5A. Leveres med en meter strømledning.

Best.nr. Førpris Ny pris  
57 02 65 215.- 169.-

### IC monteringsverktøy

For å ta ut og sette inn 20-124 pinner IC'er i PLCC-sokler.

Best.nr. Førpris Ny pris  
14 94 70 148.- 99.-

### ROMcorder

Med dette byggesettet kan man lagre audiosignaler av enhver art i ROM. Tale, musikk eller lydeffekter kan avspilles om og om igjen. Max inspillingstid 16 sekunder per krets, og flere kretser kan kaskadekobles. Lyden holder seg i ROM i minst 10 år, og forsvinner ikke hvis strømmen går. Båndbredde 3.4kHz (fast avspillingsfrekvens 8kHz). Høyttalerutgang 8-16Ω, 100mW. Bruker 5V DC, max 28mA. Byggesett med utførlig tysk bruksanvisning.

Best.nr. Førpris Ny pris  
19 27 40 430.- 299.-

### Styringskort for ROMcorder

Gjør det mulig å lagre flere lyder på ROMcorderen. 8-pols DIP-switch for innstilling av adressen man vil lagre på. KAN også brukes til å styre flere ROMcordere i kaskade. Byggesett med utførlig tysk bruksanvisning.

Best.nr. Førpris Ny pris  
19 27 32 139.50 99.-

### RAMcorder

Kan brukes til å lagre alle mulige lyder. Disse blir digitalisert og lagret i 1 megabit DRAM (kan bygges ut til totalt 4Mb). Max inspillingstid 90 sekunder per Mb RAM. Valgfri avspillingshastighet på 11, 16, 22 eller 32kb/s, som gir god lyd kvalitet. Kondensatormikrofon følger med. Innebygd 1W forsterker for 8Ω høyttaler. Bruker 9-15V DC, max 15mA. Byggesett med utførlig tysk bruksanvisning.

Best.nr. Førpris Ny pris  
19 18 76 551.- 499.-

### Styre kort for RAMcorder

Gjør at man ved hjelp av brytere eller reléer kan styre 10 forskjellige lydpassasjer direkte på samme RAMcorder. Byggesett med utførlig tysk bruksanvisning.

Best.nr. Førpris Ny pris  
19 26 86 99.50 79.-

### Kobler for parabolantenn

Gjør at man kan ha to parabolantenn koblet til en tuner, eller to tunere til en antenne. Brukes til f.eks. vår TeleX-antenne, som skal kobles parallelt med eksisterende antenne.

Hirschmann

Best.nr. Førpris Ny pris  
28 46 37 431.- 299.-

### Koffertalarm

Med innebygd elektronisk sirene. Varsler med en høy pipetone når noen prøver å stikke av med kofferten. Avsikres med kodelås. Ligner til forveksling et vanlig navneskilt, og kan monteres på alle typer koffert og vesker. Bruker 2 LR-44 klokkebatterier (medfølger).

Best.nr. Førpris Ny pris  
75 38 58 107.- 79.-

### Vifte kort til PC

Sikker beskyttelse mot overoppheting av PC'er. Meget støysvak, kun 32dB. Trekker 0.7m³/min per vifte. Bruker 12V DC (0.2A) som kobles med ledning fra strømforsyningen.

#### Viftekort med en vifte

Best.nr. Førpris Ny pris (inkl. mva)  
99 87 45 447.- 299.-

#### Viftekort med to viften

Best.nr. Førpris Ny pris  
99 87 88 548.- 399.-

### 486-33 hovedkort

Med 33MHz 486DLC (DX) prosessor, som har funksjoner som gjør grafikkoperasjoner raskere enn andre prosessorer. Med matteprosessor og to banker for opptil 32MB SIMM RAM.

Best.nr. Førpris Ny pris (eks. mva)  
PC 1177 3657.- 2499.-

# STEREO MIXER W/EQUALIZER & ECHO

## MODEL NO. LMX-907

### MAIN FUNCTION

- 5 BAND EQUALIZER
- ECHO EFFECTS
- SOUND EFFECTS W/SPEED CONTROL
- DJ MIKE AUTO-TALK
- VOICE CHANGER
- REMOVEABLE FADER
- RACK MOUNT
- POWER SUPPLY BY AC ADAPTOR 12V

### SPECIFICATIONS

INPUT SENSITIVITY/INPUT IMPEDANCE:

DJ MIKE	1.5 mV/10 mV 10k ohms
MIKE	1.5 mV/50 mV 10k ohms
MAGNETIC PHONO @1 kHz	3.0 mV/120 mV 47k ohms
LINE (CD/TAPE/AUX)	150 mV/7.2V 27k ohms
RECOMMENDED MIKE	LOW IMPEDANCE, UP TO
MATCHING IMPEDANCE	1000 ohms
OUTPUT:	

NORMAL	1V (0 dBu)
MAXIMUM (@ CLIPPING)	7.2V
FREQUENCY RESPONSE:	
MIKE	20-20k Hz $\pm$ 3 dB
HIGH-LEVEL INPUTS	20-20k Hz $\pm$ 3 dB
MAG. PHONO INPUTS	30-20k Hz $\pm$ 1 dB
SIGNAL-TO-NOISE RATIO:	
DJ MIKE	60 dB
MIKE	53 dB
PHONO	62 dB
LINE (CD/TAPE/AUX)	69 dB
STEREOPHONE OUTPUT/	5 mW/4 ohms
IMPEDANCE	10 mW/8 ohms
ECHO CIRCUIT:	
TYPE	B.B.D.
DELAY	100ms (MAX)
EQ: TONE CONTROL $\pm$ 12dB	@ 60, 250, 1k, 4k,
RANGE @ CENTER PREQS.	12kHz

Best. nr. 060200 Pris kr. 1998.-

### Naturelite lysanlegg

Soldrevet lysanlegg med bevegelsesdetektor, som automatisk slår på lyset i 90 sekunder når den registrerer bevegelse innen 25m. Fotocelle deaktiverer anlegget under dagslys, mens solpanelet lader op batteriene (6V). Lett å installere.

Best. nr. 09 00 65  
Pris 899.-

Bulbs included

### Cyrix 486 DLC 33MHz hovedkort

Dette hovedkortet bruker 33MHz prosessoren fra Cyrix. Den gjør at hovedkortet går raskere ved grafiske operasjoner enn et tilsvarende Intel 486DX 33MHz-kort. Det har AMI BIOS og 7 kortplasser. Opptil 32MB RAM kan monteres i de 8 SIMM-slotene. 1K intern "writeback" cache og 128K ekstern cache. 'Writeback' betyr at prosessoren også bruker cachen når den skriver til minnet, noe som Intels ikke gjør.

Best. nr. PC 1177  
Pris 2499.-
